PART 1 — GENERAL (GEN)

GEN 0

GEN 0.1 PREFACE

1. NAME OF THE PUBLISHING AUTHORITY

The Oman Aeronautical Information Publication (AIP) is published by The Civil Aviation Authority (CAA).

Postal Address :

Civil Aviation Authority (CAA)

Aeronautical Information Management Department (AIM)

P. O. Box 758 POSTAL CODE 111 MUSCAT

Sultanate of Oman

TEL : *(968) 24 354955*

Telefax:

AFS : *OOMSYAYX*

Email : *sdc@caa.gov.om*

Website : *Nil*

2. APPLICABLE ICAO DOCUMENTS

This AIP has been prepared in accordance with the Standards and Recommended Practices (SARPs) of Annex 15 to the Chicago Convention and, in general, conforms to the guidance material in the Aeronautical Information Services Manual (ICAO Doc 8126 - AN/ 872). Charts contained in the AIP are produced in accordance with Annex 4 to the Chicago Convention and the Aeronautical Chart Manual (ICAO Doc 8697 - AN/889).

Differences from ICAO Standards, Recommended Practices and Procedures are given in Section GEN 1.7.

3. THE AIP STRUCTURE AND ESTABLISHED REGULAR AMENDMENT INTERVAL

3.1 The AIP structure

This AIP forms part of the Integrated Aeronautical Information Package, details of which are given at Section GEN 3.1. The principal AIP structure is shown in graphic form on page GEN 0.1-3.

The AIP is divided into three parts, General (GEN), Enroute (ENR) and Aerodromes (AD), each divided into sections and sub-sections, containing various types of information subjects.

3.1.1 Part 1 - General (GEN)

Part 1 consists of five sections containing information briefly described hereafter.

GEN 0.

Preface; Record of AIP Amendments; Record of AIP Supplements; Checklist of AIP pages; List of hand amendments to the AIP; and the Table of Contents to Part 1.

GEN 1. National regulations and requirements

Designated Authorities; Entry, Transit and Departure of Aircraft; Entry, Transit and Departure of Passengers and Crew; Entry, Transit and Departure of Cargo; Aircraft Instruments, Equipment and Flight Documents; Summary of National Regulations; and Differences from ICAO Standards, Recommended Practices and Procedures.

GEN 2. Tables and Codes

Measuring System, Aircraft Marking, Holidays; Abbreviations;Chart Symbols; Location Indicators; List of Radio Navigation Aids; Conversion Tables; SunriseSunset Tables.

GEN 3. Services

Aeronautical Information Services; Aeronautical Charts; Air Traffic Services; Communication Services; Meteorology; and Search and Rescue.

GEN 4. Charges for aerodromes/heliports and air navigation services

Aerodrome Charges; Air Navigation Services Charges;and Flight Safety Standards Fees.

3.1.2 Part 2 - En-route (ENR)

Part 2 consists of seven sections containing the information briefly described hereafter.

ENR 0.

Table of contents to Part 2.

ENR 1. General Rules and Procedures

General Rules; Visual Flight Rules; Instrument Flight Rules; ATS Airspace Classification; Holding, Approach and Departure Procedures; Radar Services and Procedures; Altimeter Setting Procedures; Regional Supplementary Procedures; Flight Planning; Addressing of Flight Plan Messages; Interception of Civil Aircraft;Unlawful Interference; and Air Traffic Incidents.

ENR 2. Air traffic services airspace

Detailed description of Flight Information Regions (FIR), Upper Flight Information Regions (UIR), Terminal Control Areas (TMA); and Other Regulated Airspace.

ENR 3. ATS routes

Detailed description of Conventional Navigation Routes; Area Navigation Routes; Other Routes; EnRoute Holding .

Note: Other types of routes which are specified in connection with procedures for traffic to and from aerodromes/heliports are described in the relevant section of the Part 3 - Aerodromes.

ENR 4. Radio Navigation Aids/Systems

Radio Navigation Aids - En-route; Name-code Designators for Significant Points.

ENR 5. Navigation Warnings

Prohibited, Restricted and Danger Areas; Military Exercise and Training Areas; Other Activities of Dangerous Nature; Air Navigation Obstacles - En-route; Aerial Sporting and Recreational Activities; and Bird Migration and Areas with Sensitive Fauna.

ENR 6. En-route charts

En-route Chart - ICAO and Index Charts.

3.1.3 Part 3 - Aerodromes (AD)

Part 3 consists of four sections containing information as briefly described hereafter.

AD 0.

Table of Contents to Part 3.

AD 1. Aerodromes/Heliports - Introduction

Aerodrome availability; Rescue and Fire Fighting Services and Snow Plan; Index to Aerodromes and Heliports; Grouping of Aerodromes/Heliports; Status of Certification of Aerodromes.

AD 2. Aerodromes

Detailed information about aerodromes, including helicopter landing areas, if located at the aerodromes, listed under 24 subsections.

AD 3. Heliports
To be constructed.

3.2 Regular amendment interval

The Oman AIP will be updated on regular basis according to the AIRAC calendar published in GEN 3.1. Whenever AIRAC AMDT is published, a trigger NOTAM will be issued at least 28 days before the effective date giving a brief description of the contents and come into force on the same effective date and time of the AIRAC. It remains valid for a period of 14 days.

If no information was submitted for publication at the AIRAC date, a NIL notification will be issued by the NOTAM

checklist at least one cycle (28 days) before the AIRAC effective date concerned.

3.3 Notification

For the purpose of this document “NOTIFIED” means set forth in a document, published by the CAA, entitled either AIP Oman or NOTAM Oman which is, for the time being, in force and which relates to the portion of the relevant legislation specified therein.

4. SERVICE TO CONTACT IN CASE OF DETECTED AIP ERRORS OR OMISSIONS

In the compilation of this AIP, care has been taken to ensure that the information contained herein is accurate and complete. Any errors or omissions which may nevertheless be detected, as well as any correspondence concerning the Integrated Aeronautical Information Package, should be referred to the CAA at the address given in 1.

GEN 1.2 ENTRY, TRANSIT AND DEPARTURE OF AIRCRAFT

1. GENERAL

1.1 All flights into, from or over the territory of Oman and landings in such territory will be carried out in accordance with the valid regulations of Oman regarding civil aviation.

1.2 Aircraft landing in or departing from the territory of Oman must first land at and finally depart from Muscat International Airport (see AD 2.OOMS) unless a special dispensation has been applied for and granted by the CAA in advance.

2. SCHEDULED FLIGHTS

2.1 General

For regular international scheduled flights operated by foreign airlines into, from or over the territory of Oman,the following requirements must be met:

a) the State of the airline must be a party to the International Air Services Transit Agreement and/or the International Air Transport Agreement; Oman is a party to both Agreements; and

b) the airline must be eligible to make the flights under the provisions of a bilateral or multilateral agreement,to which the State of the airline and Oman are contracting parties, and be in possession of a permit authorizing the operation pursuant to the said agreement.

2.2 Application for permits will be submitted to CAA as detailed below:

a) For scheduled operations into Oman, chartered flights, additional landing flights, technical landings and/or amend flight times, routes and/or operated aircrafts shall be addressed to:

Postal Address :

Directorate of Air Transport

Civil Aviation Authority (CAA)

Website : *NIL*

3. NON-SCHEDULED FLIGHTS

3.1 General

Operators must obtain permission to carry out nonscheduled flights into, from or over the territory of Oman, whether or not for the purpose of taking on or discharging passengers, cargo or mail.

All Non-scheduled aircraft overflying the Sultanate of Oman and operating into Muscat Intl and Salalah airports shall quote the permit number granted on each and every Flight Plan.

3.2 Information required

Applications for such permission will be submitted to the CAA at the address given in GEN 1.2-1 paragraph 2.2 a) in sufficient time to arrive not less than seventytwo hours in advance of the intended landing or overflight.

Applications for non-scheduled flights must include the following information in the order shown:

1) Name of operator and full mailing address (including telephone/fax/e-mail)

2) Type of aircraft, MTOW, registration marks and availability of ACAS-II and serviceable transponder

3) Callsign/flight number (ICAO 3 letter code)

4) Operator’s IATA Code

5) Dates and times of arrival at and departure from Muscat Intl Airport/Salalah Airport

6) Entry/exit points within Muscat FIR, itinerary schedule ETD/ETA

7) Place or places of embarkation or disembarkation abroad, as the case may be, of passenger and/or freight

8) Purpose of flight, number of passengers and/or nature and amount of freight

9) Name, address and business of charterer if any

10) Names of crew members

11) Valid and clear copies of the following documents (not required for private and overflying flights and/or technical stops):

- air operator certificate with the specifications

- certificate of air worthiness

- certificate of registration

- certificate of insurance

- aircraft noise certificate

- radio licenses certificate

12) Responsible authority for air navigation, landing and parking charges:

- head of accounts dept. with full mailing address

- account payable

- telephone/fax and e-mail address

4. PRIVATE FLIGHTS

4.1 General

Operators must obtain permission to carry out private flights into, from or over the territory of Oman.

4.2 Information required

Application for such permission will be submitted in accordance with the requirements of paragraph 3.2 non-scheduled flights, and is to be addressed to the Directorate of Air Transport at the address given in sub-paragraph 2.2 (b) (no copies of certificates required).

5. MILITARY AND DIPLOMATIC FLIGHTS

5.1 Applications for permission for military, diplomatic and government aircraft to overfly or land in Oman must be submitted fifteen (15) days in advance through diplomatic channels.

6. DOCUMENTARY REQUIREMENTS

6.1 Aircraft documents required

It is necessary that the undermentioned aircraft documents be submitted by all operators on entry and departure of their aircraft to and from Oman. All documents listed below must follow the ICAO standard format, as set forth in the relevant Appendices to Annex 9, and are acceptable when furnished in English or Arabic and completed in legible handwriting. No visas are required in connection with such documents.

Aircraft documents required (arrival/transit/departure)

Document Required	**General Declaration**			**Passenger Manifest**			**Cargo Manifest**		
by - for	**Arr**	**Trans**	**Dep**	**Arr**	**Trans**	**Dep**	**Arr**	**Trans**	**Dep**
Immigr. Health Customs	3 1 1	3 0 1	2 1 1	3 2 1	3 0 0	3 2 1	1 1 2	0 0 2	1 1 2
Total	5	4	4	6	3	6	4	2	4

Note:
a) One copy of the General Declaration is endorsed and returned by Customs, signifying clearance.
b) For the purposes of this regulation, a transit flight is deemed to be one when no passengers embark or disembark and no articles are loaded or unloaded.In the latter case, a - NIL - Cargo Manifest satisfies the requirement.

6.2 Public Health measures applied to aircraft

No Public Health measures are normally required to be carried out in respect of aircraft entering Oman. When circumstances necessitate such measures being taken, responsible authorities will receive adequate prior notification.

GEN 1.3 ENTRY, TRANSIT AND DEPARTURE OF PASSENGERS AND CREW

1. IMMIGRATION REQUIREMENTS

1.1 Arriving passengers

a) A person entering Oman for a visit or employment must hold a valid passport and either a valid visa or a no-objection certificate (NOC). A business visit visa may be obtained from Embassies or Consulates of the Sultanate of Oman abroad.

b) Nationals of Gulf Co-operation Council (G.C.C.Bahrain, Kuwait, Qatar, Saudi Arabia and The United Arab Emirates) do not require visas.

c) Certain specified professionals holding residence permits of any G.C.C. Country valid for at least 6 months and who have resided there for at least one year do not require a visa as long as they have their passports and original labour cards with them. (For a listing of the professions refer to Omani embassies / consulates, Royal Oman Police Immigration Authorities, travel agents or the Royal Oman Police Web site www.rop.gov.om)

d) Other Nationalities should access The Royal Oman Police Web site: www.rop.gov.om for information about the issuance of Visas upon arrival.

1.2 Departing passengers

All persons leaving Oman must present a valid passport for inspection.

1.3 Transit passengers

No documents or visas are required of passengers arriving and departing on the same through flight or transferring to another flight at the same airport without entering Oman.

1.4 Arriving, departing and transit crew

Members of operating or positioning crews of aircraft engaged in scheduled international air services and non-scheduled international air transport operations, who remain at the airport where the aircraft has stopped or within the confines of the cities adjacent thereto and depart on the same or next regularly scheduled flight out of Oman, are exempt from the requirement to hold a visa provided that they travel in uniform and carry a valid passport. Crew members travelling under any other circumstances, including those of aircraft engaged in private flights, shall be regarded as passengers for immigration purposes and, as such, shall comply with the relevant conditions prescribed in the foregoing paragraphs.

1.5 Notification

Paragraphs 1.1, 1.2, 1.3 and 1.4 are hereby notified for the purposes of the appropriate sections of the Aliens Residence Decree of 1974.

2. CUSTOMS REQUIREMENTS

2.1 Arriving passengers and crew

Personal baggage and belongings are immediately released except for those selected by the Customs Authorities for inspection.

2.2 Departing and transit passengers and crew

No customs formalities are normally required on departure or in transit.

3. PUBLIC HEALTH REQUIREMENTS

3.1 Arriving and transit passengers and crew

a) Smallpox. A current certificate of vaccination against Smallpox is no longer required.

b) Cholera. A Cholera vaccination certificate is not normally required, but the Public Health Authorities reserve the right to administer vaccination and/or chemoprophylaxis to persons arriving from infected or endemic areas.

c) Yellow Fever. A current certificate of vaccination against Yellow Fever is required for persons arriving from endemic areas.

N. B. For the purpose of paragraph 3.1, transit passengers are deemed to be those who leave the aircraft and enter the terminal building.

3.2 Departing passengers and crew

A current certificate of vaccination against Yellow Fever is required at destination for persons entering or in transit through endemic areas. No other health formalities are required.

GEN 1.4 ENTRY, TRANSIT AND DEPARTURE OF CARGO

1. CUSTOMS REQUIREMENTS CONCERNING CARGO AND OTHER ARTICLES

1.1 All cargo imports are subject to customs formalities.

1.2 Transhipment of cargo from one flight to another flight, at the same airport, must be carried out under customs supervision.

1.3 All cargo exports are subject to customs formalities.

1.4 Customs procedures in force are in accordance with those laid down by the Customs Cooperation Council in Brussels (CCCN) and conform to the Standard International Trade Classification (SITC).

1.5 Detailed information regarding the documentation and formalities pertaining to the import, transhipment and export of cargo should be sought from the Director General of Customs, at the following address when application is made for the operation of the flight:

Postal Address: Directorate General of Customs
P. O. Box 205
MUSCAT
POSTAL CODE 113
Sultanate of Oman
Telefax: (968) 24712199

1.6 Notification

Paragraphs 1.1, 1.2 and 1.3 are hereby notified for the purposes of the appropriate sections of the Customs Management Act of 1978.

2. AGRICULTURAL AND VETERINARY QUARANTINE REQUIREMENTS

2.1 General

a) The formalities specified in paragraphs 2.2 to 2.7 inclusive are applicable to the importation of all animals and birds, live or dead, whether or not for slaughter, and all animals and bird products, fresh or frozen, including eggs and semen.

b) The formalities specified in paragraphs 2.8 to 2.11 inclusive are applicable to the importation, transit and exportation of all agricultural goods and materials including inter alia, seeds, seedlings and living plants including soil, cut flowers, fresh and dried vegetables, fruit and nuts, grain, flour, tobacco leaves and wood samples.

c) Detailed information regarding the documentation and formalities referred to should be sought from the Ministry of Agriculture and Fisheries, at the address given in GEN 1.1 paragraph 7.

2.2 Documentary requirements for Veterinary Quarantine

a) Import permit. An import permit shall be obtained from the Ministry of Agriculture and Fisheries, prior to shipment from the country of origin, for all live animals, birds and animal/bird products.

b) Veterinary health certificate. A specific original health certificate, in the format prescribed by the Disease of Animals Control Order 1977 and signed by a duly authorized veterinarian, shall accompany each import.

c) Rabies vaccination certificate. A valid certificate showing vaccination for Rabies should accompany each cat, dog or other specified mammal. This certificate is considered valid if it has been carried out not less than one month but no more than six months prior to the entry time of the animal.

d) Release permit. This is issued at the port of entry, subject to the documentation referred to in (a), (b) and (c) above and the examination referred to in 2.3 below being satisfactory, by the Veterinary Quarantine Officer responsible.

2.3 Examination

All imports shall be examined by a duly authorized Quarantine Officer of the Veterinary Department of the Ministry of Agriculture and Fisheries, on arrival at the port of entry.

2.4 Payment of fees

All fees due in respect of veterinary examination and/or certification shall be paid prior to the release of the import.

2.5 Ports of entry

Dogs and cats shall only be permitted entry through Muscat Intl Airport. All other animals, birds and products shall be permitted entry at Muscat Intl Airport and Salalah Airport.

2.6 Prohibition

In the event of non-compliance with these regulations imports shall be prohibited and may result in re-export, condemnation of the animal, etc.

2.7 Penalties

Violation of the regulations specified in paragraphs 2.2 to 2.6 inclusive shall result in a fine not exceeding OMR 1000 being imposed and, in respect of live animals and birds, may result in immediate euthanasia.

2.8 Documentary requirements for Plant Quarantine

a) Import permit. An import permit shall be obtained from the Ministry of Agriculture and Fisheries, prior to shipment from the country of origin, for date and coconut palms, citrus, banana and tobacco plants (N.B. the fruit of these plants are allowed without a permit), live insects, honey bees, spiders, nematodes, bacteria, viruses, fungi and algae.

b) Customs form. Required for endorsement with the results of the examination referred to in paragraph 2.9.

c) Phytosanitary certificate. Seeds and live plants shall be accompanied by an official certificate, issued by the country of origin, stating that the consignment is free from agricultural pests and diseases. In respect of live plants, the certificate shall specify the type of sterilization treatment applied, to the soil in which they are rooted, by the country of origin.

2.9 Examination

All consignments shall be examined, by a duly authorized Plant Quarantine Officer, to ensure that they are free from pests and diseases.

2.10 Prohibitions and restrictions

a) The import, transit and export of animal manures is prohibited.

b) The import of untreated or unsterilized natural soil is prohibited.

c) The import of treated or sterilized natural soil is permitted, only insofar as live plants are rooted in it, subject to satisfactory certification of the treatment referred to in paragraph 2.8 c) and to the proviso that further treatment is administered by a duly authorized Plant Quarantine Officer prior to release.

d) Imports found to be diseased or pest-infested shall either be returned to the country of origin, within one week from the date of arrival, or destroyed.

e) Plants and plant products shall not remain in transit for longer than one week, unless the Minister of Agriculture and Fisheries directs otherwise.

2.11 Penalties

Violations of the regulations specified in paragraphs 2.8 to 2.10 inclusive shall result in a fine not exceeding OMR 1000.

GEN 1.5 AIRCRAFT INSTRUMENTS, EQUIPMENT AND FLIGHT DOCUMENTS

1. GENERAL

Commercial air transport aircraft operating in the Sultanate of Oman must adhere to the provisions of ICAO Annex 6 Operation of Aircraft, and any differences thereto as notified by the Sultanate of Oman.

2. INSTRUMENTS TO BE CARRIED

Specific details of the requirements of Annex 6 are contained in the Oman Civil Aviation Regulations.

Details of the minimum requirements for the carriage of radio equipment are listed on the page GEN 3.4-1 para 4.2.

3. FLIGHT DOCUMENTS TO BE CARRIED

3.1 The aircraft flight manual or other documents or information concerning any operating limitations prescribed for the aircraft by the certificating authority of the State of Registry.

3.2 Current and suitable charts for the route of the proposed flight and all routes along which it is reasonable to expect that they may divert the flight.

3.3 Procedures, as prescribed in Annex 2, for pilots-incommand of intercepted aircraft.

3.4 A list of visual signals for use by intercepting and intercepted aircraft, as contained in Annex 2.

4. REQUIREMENT TO CARRY AN AIRBORNE COLLISION AVOIDANCE SYSTEM (ACAS II) IN THE MUSCAT FIR

4.1 Introduction

4.1.1 In accordance with Civil Aviation Regulation CAR OPS-1.668 of The Sultanate of Oman, all turbine-powered aircraft having a certified take-off mass in excess of 5700 KG, or a maximum approved passenger seating configuration of more than 19, are required to be equipped with a serviceable Airborne Collision Avoidance System (ACAS) in the Muscat FIR.

4.1.2 The minimum system performance of the equipment must meet the requirements of ICAO Annex 10 Volume IV.

4.1.3 In the event of failure of ACAS equipment on aircraft that are away from their maintenance base, that aircraft may be dispatched with an unserviceable ACAS equipment if authorised by the State of Registry (i.e.approved MEL item) and if acceptable to the ATC unit (providing en-route or approach procedures do not require its use). Aircraft operating with unserviceable ACAS under this MEL dispensation shall indicate the unserviceability in Item 18 of the flight plan (Other information).

4.1.4 The following conditions apply against this MEL dispensation to return the aircraft to base:

a) The aircraft navigation system shall be equipped with at least one GPS receiver;

b) Where agreed Regulations and Procedures exist, these shall be maintained;

c) The application of an internal Rectification Interval Extension (RIE) by the operator as per CAR MEL.013(a), is not permissible with this equipment type failure;

d) An ICAO compliant altitude reporting transponder must be fitted and serviceable before departure;

e) An ACAS MEL dispensation will be valid for a period from the time of entry in the Technical log as an approved MEL item;

f) Conditions may be imposed by one or more States, which may include:

i operating within certain restrictive hours, or

ii via specific routes, or

iii at stated flight levels (for safety reasons or otherwise).

g) The flight must be conducted along the most direct (or permissible) route to the delivery or maintenance destination airport.

4.1.5 Aircraft operators are to ensure compliance with the above conditions, the MEL dispensation flight is in accordance with the operator's originally stated intentions, and that it must comply with any conditions laid down by the CAA and subsequently by the ATC authorities.

4.1.6 Operators of aircraft intending to operate under the provisions of this MEL approved item must seek approval to conduct the flights through the airspace of other ATC units from the appropriate State authorities.

4.1.7 In the event when ACAS is inoperative, any aircraft with an unserviceable transponder as well as an unserviceable TCAS will not be permitted within the Oman FIR for which mandatory carriage of a transponder is required.

4.2 Procedures

4.2.1 The following in-flight procedures shall be followed by flight crews in the operation of ACAS:

a) The ACAS equipment shall be kept on while operating in the Muscat FIR.

b) In the event of a Traffic Advisory (TA), the pilot should attempt to establish visual contact with the approaching traffic and change the flight path only if a collision risk is visually established;

c) In the event of a Resolution Advisory (RA), the pilot should respond in accordance with the collision avoidance manoeuvre prescribed by the ACAS system. In addition, the pilot should undertake a visual search for the conflicting traffic and a scan of the airspace into which his own aircraft might manoeuvre;

d) The alteration of the flight path shall be limited to the minimum extent necessary to comply with the RA;

e) Pilots who deviate from an ATC instruction or clearance in response to a RA shall promptly return to the terms of that instruction or clearance when the conflict is resolved;

f) Pilots shall, as soon as possible, notify the appropriate ATC unit any RA which requires a deviation from the current ATC instruction or clearance and, when the conflict is resolved, of returning to the terms of the original ATC instruction or

clearance;

g) Written notification of the RA is to be submitted promptly to The Civil Aviation Authority of Oman.

4.3 General

4.3.1 Nothing in the procedures specified in section 4.2 above shall prevent pilots-in-command from exercising their best judgement and full authority in the choice of the best course of action to resolve a traffic conflict.

4.3.2 In accordance with the requirements of ICAO Annex 2 and Civil Aviation Regulation 91.123 of The Sultanate of Oman, the departure of an aircraft from the terms of its ATC instruction or clearance in response to a RA is sanctioned, provided that the ACAS equipment and its installation are certified by the state of Registry and that its operation by flight crew is in accordance with the instructions for the use of this equipment specified in the company's operations manual or equivalent document, if not the holder of an Air Operator's Certificate.

4.3.3 Once an aircraft departs from an ATC instruction or clearance, the controller ceases to be responsible for providing standard separation between that aircraft and other aircraft affected as a direct consequence of that RA manoeuvre. The controller's responsibility resumes when either:

a) The controller acknowledges a report from the flight crew of the aircraft that had reported the RA that it has resumed its assigned instruction or clearance; or

b) The controller acknowledges a report from the flight crew of an aircraft that had reported the RA that it is returning to its assigned instruction or clearance and then issues an alternative clearance which has been acknowledged by the flight crew.

GEN 1.6 SUMMARY OF NATIONAL REGULATIONS AND INTERNATIONAL AGREEMENTS/CONVENTIONS

1. GENERAL

1.1 The following is a listing of civil aviation legislation and regulations, in force in the Sultanate of Oman, for civil aviation operations. It is essential that persons engaged in civil air operations in this country be acquainted with the relevant regulations.

1.2 These documents can be obtained from:

Civil Aviation Authority
P.O. Box 1
POSTAL CODE 111
MUSCAT
Sultanate of Oman
Telephone: (968) 24 354433
web: http://www.caa.gov.om/

Electronic copies of these documente may be obtained from: http://www.caa.gov.om/regulations

2. LIST OF CIVIL AVIATION LEGISLATION AND REGULATION

TITLE	CONTENTS
Civil Aviation Law Royal Decree 76/2019	Administration, Aircraft Operation, Rules of the Air, Licenses, Charges, Registration/Airworthiness, Commercial Air Transport, Aircraft Accidents, Search and Rescue, Criminal Offences, Penalties.
Civil Aviation Regulations	CAR 1 - DEFINITIONS AND ABBREVIATIONS CAR 10 - EXEMPTIONS CAR 11 - RULEMAKING PROCEDURE CAR 12 - ENFORCEMENT PROCEDURES CAR 13 - AIRCRAFT ACCIDENT AND INCIDENT INVESTIGATION CAR 15 - APPOINTMENT OF AUTHORIZED PERSONS AND REVIEW OF DECISIONS CAR 21 - AIRWORTHINESS AND ENVIRONMENTAL CERTIFICATION OF AIRCRAFT, THE ACCEPTABILITY OF RELATED PRODUCTS, PARTS AND APPLIANCES, AIRCRAFT COMPONENTS AND MATERIALS CAR 39 - AIRWORTHINESS DIRECTIVES CAR 47 - AIRCRAFT REGISTRATION AND REGISTRATION MARKINGS AND AIRCRAFT DEREGISTRATION CAR 66 - AIRCRAFT MAINTENANCE LICENSE REQUIREMENTS CAR 77 - MANNED BALLOON OPERATIONS CAR 92 - DANGEROUS GOODS CAR 99 - DRUGS AND ALCOHOL MANAGEMENT PLAN (DAMP)

TITLE	CONTENTS
	CAR 100 - SAFETY MANAGEMENT SYSTEM CAR 101 - AIR RECREATIONAL ACTIVITIES CAR 102 - REMOTE PILOTED AIRCRAFT (DRONES) CAR 129 - AIR OPERATIONS OF FOREIGN OPERATORS CAR 139 P1 - AERODROMES - CERTIFICATION, DESIGN AND OPERATION CAR 139 P2 - HELIPORTS AND WATER AERODROMES CAR 145 - APPROVED MAINTENANCE ORGANIZATIONS CAR 147 - APPROVED MAINTENANCE TRAINING ORGANIZATIONS CAR 171 - AERONAUTICAL TELECOMMUNICATION SERVICE PROVIDER CAR 172 - AIR TRAFFIC SERVICE CAR 173 - INSTRUMENT FLIGHT PROCEDURE DESIGN REQUIREMENTS CAR 174 - AVIATION METEOROLOGICAL ORGANIZATIONS-CERTIFICATION CAR 175 - AERONAUTICAL INFORMATION SERVICE CAR 176 - SEARCH AND RESCUE CAR 177 - AERONAUTICAL CHARTS CAR 178 - UNITS OF MEASUREMENT CAR 179 - AERODROME FLIGHT INFORMATION SERVICE CAR 180 - RULES OF THE AIR CAR AEW - AERIAL WORK REGULATIONS CAR-FCL - FLIGHT CREW LICENSING CAR-FCL 3 - AVIATION MEDICAL REQUIREMENTS CAR-FCL SUPP - SUPPLEMENT CAR M - CONTINUING AIRWORTHINESS CAR MLA - MICROLIGHT AEROPLANES CAR-OPS 1 - COMMERCIAL AIR TRANSPORTATION (AEROPLANES) CAR-OPS 2 - GENERAL AVIATION (AEROPLANES) CAR-OPS 3 - COMMERCIAL AIR TRANSPORTATION (HELICOPTERS) CAR-OPS 4 - GENERAL AVIATION (HELICOPTERS) CAR MEL - MINIMUM EQUIPMENT LIST CAR ORA - ORGANIZATION REQUIREMENTS FOR AIRCREW CAR - ATCO Air Traffic Controller Licensing & ATC Training Organizations
Airport Operations Manual	Regulations concerning the use of Muscat International aerodrome area by personnel and vehicles.
Customs Management Decree, 1978	Regulations concerning the formalities associated with import, transhipment and export of goods and associated duties, offences and penalties.
Aliens Residence Law	Immigration Regulation.
Diseases of Animals, Control Order 1977 Regulations 1, 3 and 4 and Schedules 1 to 6 inclusive hereto	Conditions of importation for live or dead animals, birds and products from it and associated penalties.
Rabies (Importation of Dogs, Cats and other Mammals)	Prohibition, conditions of import, health certification and

TITLE	CONTENTS
Order 1978	associated penalties.
Plant Quarantine Law 49/77	Regulations relating to plants and plant products.
Ministry Agricultural Quarantine Orders 9/79 and 11/79	Regulations relating to agricultural goods other than plants.
Airport Emergency Plan	Manual dealing with responsibilities and actions of all agencies and personnel involved dealing with aircraft emergencies and/or other emergencies affecting Muscat International aerodrome.
Muscat International aerodrome fire orders and evacuation plans	Acquaint Muscat aerodrome staff with the correct emergency actions required to help safeguard themselves and aerodrome passengers in case of fire or other serious emergency.

GEN 1.7 DIFFERENCES FROM ICAO STANDARDS, RECOMMENDED PRACTICES AND PROCEDURES

ANNEX 1 - PERSONNEL LICENSING (FOURTEENTH EDITION)

Reference	Difference
Nil.	Nil.

ANNEX 2 - RULES OF THE AIR (TENTH EDITION)

Reference	Difference
4.4	No VFR flights above FL150.

ANNEX 3 – METEOROLOGY SERVICE FOR INTERNATIONAL AIR NAVIGATION (TWENTIETH EDITION)

Reference	Difference
Nil.	Nil.

ANNEX 4 - AERONAUTICAL CHARTS (ELEVENTH EDITION)

Reference	Difference
1.2.2	Charts comply with the standards and recommended practices of Annex 4, except those to which a difference has been notified to ICAO.
2.1.8	The sheet size of the charts is 210 x 297mm (A4).
5.2	The Aerodrome Terrain and Obstacle Chart - ICAO (Electronic) is not provided.
11.4	The sheet size is 210 x 297mm (8.27 x 11.69in) (A4).
12.4	The sheet size is 210 x 297mm (8.27 x 11.69in) (A4).
17.1	The Aeronautical Chart - ICAO 1:500 000 is not provided.
18.1	The Aeronautical Navigation Chart - ICAO small scale is not provided.
19.1	The Plotting Chart - ICAO is not provided.
20.1	The Electronic Aeronautical Chart Display - ICAO is not provided.

ANNEX 5 - UNITS OF MEASUREMENT TO BE USED IN AIR AND GROUND OPERATIONS (FIFTH EDITION)

Reference	Difference
Nil.	Nil.

ANNEX 6 - OPERATION OF AIRCRAFT (PART I, TWELFTH EDITION, PART II, ELEVENTH EDITION, PART III, ELEVENTH EDITION)

Reference	Difference
PART I	Nil.
PART II	Nil.
PART III	Nil.

ANNEX 7 - AIRCRAFT NATIONALITY AND REGISTRATION MARKS (SIXTH EDITION)

Reference	Difference
Nil.	Nil.

ANNEX 8 - AIRWORTHINESS OF AIRCRAFT (THIRTEENTH EDITION)

Reference	Difference
Nil.	Nil.

ANNEX 9 - FACILITATION (SIXTEENTH EDITION)

Reference	Difference
2.5	A General Declaration is required.
2.7.2	A Passenger Manifest is required.
2.9	A Cargo Manifest is required.
2.13	Four copies of the General Declaration are required. Six copies of the Passenger Manifest are required. Four copies of the Cargo Manifest are required.
2.16	Five copies of the General Declaration are required. Six copies of the Passenger Manifest are required. Four copies of the Cargo Manifest are required.
2.19	Documents accepted in English or Arabic only.
2.37	Seventy-two-hour notice is required for all non-scheduled international flights, and is subject to approval from the CAA.
3.5	Visas required for all foreign nationals (see exceptions on

Reference	Difference
	page GEN 1.3-1 paragraph 1.1.)
3.6	A charge is usually made for the issue of a visa.
3.8.3	Visas for temporary visitors normally valid for three months and one entry only.
3.23	No facilities exist.
3.25	A valid passport is the only document acceptable; all crew members must travel in uniform.
3.39.5	The operator of an aircraft may be fined, at the discretion of the immigration authority, if he transports to the Sultanate of Oman any person not in possession of the requisite entry documents. Additionally, the operator will also be required to repatriate such persons at his own expense.
6.37.1	Left luggage facilities available.

ANNEX 10 - AERONAUTICAL TELE-COMMUNICATIONS (VOL I, EIGHTH EDITION, VOL II, SEVENTH EDITION, VOL III, SECOND EDITION, VOL IV, FIFTH EDITION, VOL V, THIRD EDITION)

Reference	Difference
VOL I	Nil.
VOL II	Nil.
VOL III	Nil.
VOL IV	Nil.
VOL V	Nil.

ANNEX 11 - AIR TRAFFIC SERVICES (FIFTEENTH EDITION)

Reference	Difference
Nil.	Nil.

11.1 PROCEDURES FOR AIR NAVIGATION SERVICES - AND AIR TRAFFIC MANAGEMENT (PANS-ATM, DOC 4444) (SIXTEENTH EDITION)

Reference	Difference
Nil.	Nil.

ANNEX 12 - SEARCH AND RESCUE (EIGHTH EDITION)

Reference	Difference
Nil.	Nil.

ANNEX 13 - AIRCRAFT ACCIDENT AND INCIDENT INVESTIGATION (TWELFTH EDITION)

Reference	Difference
Nil.	Nil.

ANNEX 14 - AERODROMES (VOL I, NINTH EDITION, VOL II, FIFTH EDITION)

Reference	Difference
VOL I	Nil.
VOL II	Nil.

ANNEX 15 - AERONAUTICAL INFORMATION SERVICES (SIXTEENTH EDITION)

Reference	Difference
Nil.	Nil.

15.1 PROCEDURES FOR AIR NAVIGATION SERVICES - AERONAUTICAL INFORMATION MANAGEMENT (PANS-AIM, DOC 10066) (FIRST EDITION)

Reference	Difference
Nil.	Nil.

ANNEX 16 - ENVIRONMENTAL PROTECTION (VOL I, EIGHTH EDITION, VOL II, FIFTH EDITION, VOL III FIRST EDITION, VOL IV SECOND EDITION)

Reference	Difference
VOL I	Nil.
VOL II	Nil.
VOL III	Nil.
VOL IV	Nil.

ANNEX 17 - SECURITY - SAFEGUARDING INTER- NATIONAL CIVIL AVIATION AGAINST ACTS OF UNLAWFUL INTERFERENCE (TWELFTH EDITION)

Reference	Difference
Nil.	Nil.

ANNEX 18 - THE SAFE TRANSPORT OF DANGEROUS GOODS BY AIR (FOURTH EDITION)

Reference	Difference
Nil.	Nil.

ANNEX 19 - SAFETY MANAGEMENT (SECOND EDITION)

Reference	Difference
Nil.	Nil.

20. REGIONAL SUPPLEMENTARY PROCEDURES (DOC 7030) (FIFTH EDITION)

Reference	Difference
Nil.	Nil.

GEN 2 TABLES AND CODES

GEN 2.1 MEASURING SYSTEM, AIRCRAFT MARKINGS, HOLIDAYS

1. UNITS OF MEASUREMENT

The table of units of measurement shown below will be used by aeronautical stations within Muscat FIR for air and ground operations.

FOR MEASUREMENT OF	UNITS USED
Distance used in navigation, position reporting, etc. generally in excess of 2 nautical miles	* Nautical Miles and tenths
Relatively short distances such as those relating to aerodromes (e.g., runway lengths)	Metres
Altitudes, elevations and heights	Feet
Horizontal speed including wind speed	Knots
Vertical speed	Feet per minute
Wind direction for landing and taking off	Degrees Magnetic
Wind direction except for landing and taking off	Degrees True
Visibility including runway visual range	Kilometres or Metres
Altimeter setting	Hectopascal
Temperature	Degrees Celsius (Centigrade)
Weight	Metric tons or Kilograms
Time	Hours and Minutes, beginning at midnight UTC

* International nautical miles, for which conversion into metres can be expressed by:

1 NM = 1852 M

2. TEMPORAL REFERENCE SYSTEM

Co-ordinated Universal Time (UTC) and the Gregorian calendar are used by air navigation services and in publications issued by the Aeronautical Information Service.

Reporting of time is expressed to the nearest minute,e.g., 12:40:35 is reported as 1241.

3. HORIZONTAL REFERENCE SYSTEM

3.1 Name/designation of system

All published geographical coordinates indicating latitude and longitude are expressed in terms of the World Geodetic System - 1984 (WGS-84) geodetic reference datum.

3.2 Parameters of the Projection

Projection is expressed in term of Universal Transverse Mercator (UTM).

3.3 Ellipsoid

An ellipsoid is expressed in terms of the World Geodetic System - 1984 (WGS-84) ellipsoid.

3.4 Datum

The World Geodetic System - 1984 (WGS-84) is used.

3.5 Area of application

The area of application for the published geographical coordinates coincides with the area of responsibility of the AIM, i.e., the entire territory of the Sultanate of Oman as well as the airspace over the high sea encompassed by the Muscat FIR in accordance with the regional air navigation agreement.

3.6 Use of an asterisk to identify published geographical coordinates

An asterisk (*) will be used to identify those published geographical coordinates that have been transformed into WGS-84 coordinates but whose accuracy of original field work does not meet the accuracy requirements in Annex 11, Chapter 2 and Annex 14, Volumes I and II, Chapter 2.

4. VERTICAL REFERENCE SYSTEM

4.1 Name/designation of system

The vertical reference system corresponds to mean sea level (MSL).

4.2 Geoid model

The geoid model used is the Earth Gravitational Model 1996 - (EGM-96).

5. AIRCRAFT NATIONALITY AND REGISTRATION MARKS

The nationality mark for aircraft registered in Oman is the letter A, followed by the figure 4, followed by the letter O, i.e. A4O. The nationality mark is followed by a hyphen and registration mark consisting of a two or three letter group e.g. A4O-AA.

6. PUBLIC HOLIDAYS

Friday and Saturday are the weekend for both public and private sectors. Other public holidays are not on fixed dates and will be announced by government with advanced notice.

GEN 2.2 ABBREVIATIONS USED IN AIS PUBLICATIONS

Abbreviation Code	Abbreviation Description
A	Amber
AAA	(or AAB, AAC...etc., in sequence) Amended meteorological message (message type designator)
A/A	Air-to-air
AAL	Above aerodrome level
ABM	Abeam
ABN	Aerodrome beacon
ABT	About
ABV	Above
AC	Altocumulus
ACARS	(to be pronounced “AY-CARS”) Aircraft communication addressing and reporting system
ACAS	Airborne collision avoidance system
ACC	Area control centre or area control
ACCID	Notification of an aircraft accident
ACFT	Aircraft
ACK	Acknowledge
ACL	Altimeter check location
ACN	Aircraft classification number
ACP	Acceptance (message type designator)
ACPT	Accept or accepted
ACT	Active or activated or activity
AD	Aerodrome
ADA	Advisory area
ADC	Aerodrome Chart
ADDN	Addition or additional
ADF	Automatic direction-finding equipment
ADIZ	(to be pronounced "AY-DIZ") Air defence identification zone
ADJ	Adjacent
ADO	Aerodrome office (specify service)
ADR	Advisory route

Abbreviation Code	Abbreviation Description
ADS	Address (when this abbreviation is used to request a repetition, the question mark (IMI) precedes the abbreviation, e.g. IMI ADS) (to be used in AFS as a procedure signal)
ADS-B	Automatic dependent surveillance - broadcast
ADS-C	Automatic dependent surveillance - contract
ADSU	Automatic dependent surveillance unit
ADVS	Advisory service
ADZ	Advise
AES	Aircraft earth station
AFIL	Flight plan filed in the air
AFIS	Aerodrome flight information service
AFM	Yes or affirm or affirmative or that is correct
AFS	Aeronautical fixed service
AFT	After... (time or place)
AFTN	Aeronautical fixed telecommunication network
A/G	Air-to-ground
AGA	Aerodromes, air routes and ground aids
AGCC*	Arab Gulf Cooperation Council
AGL	Above ground level
AIC	Aeronautical information circular
AIM	Aeronautical information management
AIP	Aeronautical information publication
AIRAC	Aeronautical information regulation and control
AIREP	Air-report
AIRMET	Information concerning en-route weather phenomena which may affect the safety of low-level aircraft operations
AIS	Aeronautical information services
ALA	Alighting area
ALERFA	Alert phase
ALR	Alerting (message type designator)
ALRS	Alerting service
ALS	Approach lighting system
ALT	Altitude
ALTN	Alternate or alternating (light alternates in colour)

Abbreviation Code	Abbreviation Description
ALTN	Alternate (aerodrome)
AMA	Area minimum altitude
AMD	Amend or amended (used to indicate amended meteorological message; message type designator)
AMDT	Amendment (AIP amendment)
AMS	Aeronautical mobile service
AMSL	Above mean sea level
AMSS	Aeronautical mobile satellite service
ANC	Aeronautical chart - 1:500 000 (followed by name/ title)
ANS	Answer
AO	Aircraft operator
AOC	Aerodrome obstacle chart
AP	Airport
APAPI	(to be pronounced “AY-PAPI”) Abbreviated precision approach path indicator
APCH	Approach
APN	Apron
APP	Approach control office or approach control or approach control service
APR	April
APRX	Approximate or approximately
APSG	After passing
APU	Auxiliary power unit
APV	Approach procedure with vertical guidance
ARFOR	Area forecast (in aeronautical meteorological code)
ARNG	Arrange
ARO	Air traffic services reporting office
ARP	Aerodrome reference point
ARP	Air-report (message type designator)
ARQ	Automatic error correction
ARR	Arrive or arrival
ARR	Arrival (message type designator)
ARST	Arresting (specify (part of) aircraft arresting equipment)
AS	Altostratus
ASAP	As soon as possible

Abbreviation Code	Abbreviation Description
ASC	Ascend or ascending to
ASDA	Accelerate-stop distance available
ASPH	Asphalt
ASR*	Altimeter setting region
AT...	At (followed by time at which weather change is forecast to occur)
ATA	Actual time of arrival
ATC	Air traffic control (in general)
ATD	Actual time of departure
ATFM	Air traffic flow management
ATIS	Automatic terminal information service
ATM	Air traffic management
ATN	Aeronautical telecommunication network
ATP	At... (time or place)
ATS	Air traffic services
ATTN	Attention
ATZ	Aerodrome traffic zone
AUG	August
AUTH	Authorized or authorization
AUW	All-up weight
AUX	Auxiliary
AVASIS	Abbreviated visual approach slope indicator system
AVBL	Available or availability
AVG	Average
AVGAS	Aviation gasoline
AVTUR*	Aviation turbine fuel
AWTA	Advise at what time able
AWY	Airway
AZM	Azimuth
B	Blue
BA	Braking action
BASE	Cloud base
BCFG	Fog patches
BCN	Beacon (aeronautical ground light)

Abbreviation Code	Abbreviation Description
BCST	Broadcast
BDRY	Boundary
BECMG	Becoming
BFR	Before
BKN	Broken
BL...	Blowing (followed by DU=dust, SA=sand or SN=snow)
BLDG	Building
BLO	Below clouds
BLW	Below...
BOMB	Bombing
BR	Mist
BRF	Short (used to indicate the type of approach desired or required)
BRG	Bearing
BRKG	Braking
BS	Commercial broadcasting station
BTL	Between layers
BTN	Between
...C	Centre (preceded by runway designation number to identify a parallel runway)
C	Degrees Celsius (Centigrade)
C	Degrees Celsius (Centigrade)
CAA	Civil aviation authority or civil aviation administration
CAS	Controlled airspace
CAT	Category
CAT	Clear air turbulence
CAVOK	(to be pronounced "KAV-OH-KAY") Visibility, cloud and present weather better than prescribed values or conditions
CB	(to be pronounced "CEE BEE") Cumulonimbus
CC	Cirrocumulus
CCA	(or CCB, CCC...etc., in sequence) Corrected meteorological message (message type designator)
CD	Candela
CDN	Co-ordination (message type designator)
CF	Change frequency to...

Abbreviation Code	Abbreviation Description
CFM	Confirm or I confirm (to be used in AFS as a procedure signal)
CGL	Circling guidance light(s)
CH	Channel
CHG	Modification (message type designator)
CI	Cirrus
CIDIN	Common ICAO data interchange network
CIT	Near or over large towns
CIV	Civil
CK	Check
CL	Centre line
CLA	Clear type of ice formation
CLBR	Calibration
CLD	Cloud
CLG	Calling
CLR	Clear(s) or cleared to... or clearance
CLSD	Close or closed or closing
CM	Centimetre
CMB	Climb to or climbing to
CMPL	Completion or completed or complete
CNL	Cancel or cancelled
CNL	Flight plan cancellation (message type designator)
CNS	Communications, navigation and surveillance
COM	Communications
CONC	Concrete
COND	Condition
CONS	Continuous
CONST	Construction or constructed
CONT	Continue(s) or continued
COOR	Coordinate or coordination
COORD	Coordinates
COP	Change-over point
COR	Correct or correction or corrected (used to indicate corrected meteorological message; (message type designator)

Abbreviation Code	Abbreviation Description
COT	At the coast
COV	Cover or covered or covering
CPDLC	Controller-pilot data link communications
CPL	Current flight plan (message type designator)
CRP	Compulsory reporting point
CRZ	Cruise
CS	Cirrostratus
CS	Call sign
CTA	Control area
CTAM	Climb to and maintain
CTC	Contact
CTL	Control
CTN	Caution
CTR	Control zone
CU	Cumulus
CUF	Cumuliform
CUST	Customs
CW	Continuous wave
CWY	Clearway
D	Danger area (followed by identification)
D	Downward (tendency in RVR during previous 10 minutes)
DA	Decision altitude
DCD	Double channel duplex
DCKG	Docking
DCS	Double channel simplex
DCT	Direct (in relation to flight plan clearances and type of approach)
DEC	December
DEG	Degrees
DENEB	Fog dispersal operations
DEP	Depart or departure
DEP	Departure (message type designator)
DES	Descend to or descending to
DEST	Destination

Abbreviation Code	Abbreviation Description
DETRESFA	Distress phase
DEV	Deviation or deviating
DFTI	Distance from touchdown indicator
DH	Decision height
DIF	Diffuse
DIST	Distance
DIV	Divert or diverting
DLA	Delay (message type designator)
DLA	Delay or delayed
DLY	Daily
DME	Distance measuring equipment
DNG	Danger or dangerous
DOD*	Department of Defence
DOF	Date of flight
DOM	Domestic
DP	Dew point temperature
DPT	Depth
DR	Dead reckoning
DR	Low drifting (followed by DU=dust, SA=sand or SN=snow)
DRG	During
DRU*	Desert Rescue Unit
DS	Duststorm
DSB	Double sideband
DTAM	Descend to and maintain
DTG	Date-time group
DTRT	Deteriorate or deteriorating
DTW	Dual tandem wheels
DU	Dust
DUC	Dense upper cloud
DUR	Duration
DVOR	Doppler VOR
DW	Dual wheels
DZ	Drizzle

Abbreviation Code	Abbreviation Description
E	East or eastern longitude
EAT	Expected approach time
EB	Eastbound
EET	Estimated elapsed time
EFC	Expect further clearance
ELBA	Emergency location beacon-aircraft
ELEV	Elevation
ELR	Extra long range
ELT	Emergency locator transmitter
EMBD	Embedded in layer (to indicate cumulonimbus embedded in layers of other clouds)
EMERG	Emergency
END	Stop-end (related to RVR)
ENE	East north east
ENG	Engine
ENRT	En route
EOBT	Estimated off-block time
EQPT	Equipment
ER	Here... or herewith
ESE	East south east
EST	Estimate or estimated or estimate (message type designator)
ETA	Estimated time of arrival or estimating arrival
ETD	Estimated time of departure or estimating departure
ETO	Estimated time over significant point
EV	Every
EXC	Except
EXER	Exercises or exercising or to exercise
EXP	Expect or expected or expecting
EXTD	Extend or extending
EXTN*	Extension
F	Fixed
FAC	Facilities
FAF	Final approach fix
FAL	Facilitation of international air transport

Abbreviation Code	Abbreviation Description
FAP	Final approach point
FAS	Final approach segment
FATO	Final approach and takeoff area
FAX	Facsimile transmission
FBL	Light (used to indicate the intensity of weather phenomena, interference or static reports, e.g. FBL RA=light rain)
FC	Funnel cloud (tornado or water spout)
FCST	Forecast
FCT	Friction coefficient
FEB	February
FG	Fog
FIC	Flight information centre
FIR	Flight information region
FIS	Flight information service
FISA	Automated flight information service
FL	Flight level
FLD	Field
FLG	Flashing
FLR	Flares
FLT	Flight
FLTCK	Flight check
FLUC	Fluctuating or fluctuation or fluctuated
FLW	Follow(s) or following
FLY	Fly or flying
FM	From
FM...	From (followed by time weather change is forecast to begin)
FMC	Flight management computer
FMS	Flight management system
FLU	Flow management unit
FNA	Final approach
FPAP	Flight path alignment point
FPL	Flight plan
FPM	Feet per minute

Abbreviation Code	Abbreviation Description
FPR	Flight plan route
FR	Fuel remaining
FREQ	Frequency
FRI	Friday
FRNG	Firing
FRONT	Front (relating to weather)
FRQ	Frequent
FSL	Full stop landing
FSS	Flight service station
FST	First
FT	Feet (dimensional unit)
FU	Smoke
FZ	Freezing
FZDZ	Freezing drizzle
FZFG	Freezing fog
FZRA	Freezing rain
G	Green
G/A	Ground-to-air
G/A/G	Ground-to-air and air-to-ground
GA	General aviation
GALL	Imperial gallons
GBAS	(to be pronounced “GEE-BAS”) Ground-based augmentation system
GCA	Ground controlled approach system or ground controlled approach
GEN	General
GEO	Geographic or true
GES	Ground earth station
GLD	Glider
GND	Ground
GNDCK	Ground check
GNSS	Global navigation satellite system
GOV	Government
GP	Glide path
GPS	Global positioning system

Abbreviation Code	Abbreviation Description
GPU	Ground power unit
GPWS	Ground proximity warning system
GR	Hail
GRASS	Grass landing area
GRID	Processed meteorological data in the form of grid point values (in aeronautical meteorological code)
GRVL	Gravel
GS	Ground speed
GS	Small hail and/or snow pellets
GUND	Geoid Undulation
H24	Continuous day and night service
HAA*	Height above aerodrome
HAT*	Height above threshold
HAPI	Helicopter approach path indicator
HBN	Hazard beacon
HDG	Heading
HDF	High frequency direction-finding station
HEL	Helicopter
HF	High frequency (3 000 to 30 000 KHz)
HGT	Height or height above
HIALS	High intensity approach light system
HIRL	High intensity runway lights
HJ	Sunrise to sunset
HLDG	Holding
HN	Sunset to sunrise
HO	Service available to meet operational requirements
HOL	Holiday
HOSP	Hospital aircraft
HPA	Hectopascal
HQ*	Headquarters
HR	Hours
HS	Service available during hours of scheduled operations
HURCN	Hurricane
HVDF	High and very high frequency direction-finding stations (at the same location)

Abbreviation Code	Abbreviation Description
HVY	Heavy
HVY	Heavy (used to indicate the intensity of weather phenomena, e.g. HVY RA=heavy rain)
HX	No specific working hours
HYR	Higher
HZ	Haze
HZ	Hertz (cycle per second)
IAC	Instrument approach chart
IAF	Initial approach fix
IAO	In and out of clouds
IAP	Instrument approach procedure
IAR	Intersection of air routes
IAS	Indicated air speed
IBN	Identification beacon
IC	Diamond dust (very small ice crystals in suspension)
ICAO	International Civil Aviation Organization
ICE	Icing
ID	Identifier or identify
IDENT	Identification
IF	Intermediate approach fix
IFF	Identification friend/foe
IFR	IFR Instrument flight rules
IGA	International general aviation
ILS	Instrument landing system
IM	Inner marker
IMC	Instrument meteorological conditions
IMG	Immigration
IMPR	Improve or improving
IMT	Immediate or immediately
INA	Initial approach
INBD	Inbound
INC	In cloud
INCERFA	Uncertainty phase
INCL*	Inclusive

Abbreviation Code	Abbreviation Description
INCORP	Incorporated
INFO	Information
INOP	Inoperative
INP	If not possible
INPR	In progress
INS	Inches (dimensional unit)
INS	Inertial navigation system
INSTL	Install or installed or installation
INSTR	Instrument
INT	Intersection
INTL	International
INTRG	Interrogator
INTRP	Interrupt or interruption or interrupted
INTSF	Intensify or intensifying
INTST	Intensity
IR	Ice on runway
ISA	International standard atmosphere
ISB	Independent sideband
ISOL	Isolated
I/V	Instrument/visual
JAN	January
JTST	Jet stream
JUL	July
JUN	June
KG	Kilograms
KHZ	Kilohertz
KM	Kilometres
KMH	Kilometres per hour
KPA	Kilopascal
KT	Knots
KW	Kilowatts
L	Left (runway identification)
L	Locator (see LM, LO)
LAM	Logical acknowledgement (message type designator)

Abbreviation Code	Abbreviation Description
LAN	Inland
LAT	Latitude
LCTR*	Locator
LDA	Landing distance available
LDAH	Landing distance available, helicopter
LDG	Landing
LDI	Landing direction indicator
LEN	Length
LF	Low frequency (30 to 300 KHz)
LGT	Light or lighting
LGTD	Lighted
LIH	Light intensity high
LIL	Light intensity low
LIM	Light intensity medium
LM	Locator, middle
LMT	Local mean time
LNAV	(to be pronounced “EL-NAV”) Lateral navigation
LNG	Long (used to indicate the type of approach desired or required)
LO	Locator, outer
LOC	Localizer
LOC	Local or locally or location or located
LONG	Longitude
LORAN	LORAN (long range air navigation system)
LRG	Long range
LRU*	Land Rescue Unit
LSQ	Line squall
LTD	Limited
LTT	Landline teletypewriter
LV	Light and variable (relating to wind)
LVE	Leave or leaving
LVL	Level
LYR	Layer or layered
LTRS	Litres

Abbreviation Code	Abbreviation Description
M	Mach number (followed by figures)
M	Metres (preceded by figures)
MAA	Maximum authorized altitude
MAG	Magnetic
MAINT	Maintenance
MAP	Aeronautical maps and charts
MAPT	Missed approach point
MAR	At sea
MAR	March
MAS	Manual A1 simplex
MAX	Maximum
MAY	May
MCA	Minimum crossing altitude
MCW	Modulated continuous wave
MDA	Minimum descent altitude
MDF	Medium frequency direction-finding station
MDH	Minimum descent height
MEA	Minimum en-route altitude
MEHT	Minimum eye height above threshold (for visual approach slope indicator systems)
MEL	Minimum Equipment List
MET	Meteorological or meteorology
METAR	Aerodrome routine meteorological report (in meteorological code)
MF	Medium frequency (300 to 3 000 KHz)
MHA	Minimum holding altitude
MHDF	Medium and high frequency direction-finding stations (at the same location)
MHVDF	Medium, high and very high frequency direction-finding stations (at the same location)
MHZ	Megahertz
MID*	Middle East
MID	Mid-point (related to RVR)
MIFG	Shallow fog
MIL	Military

Abbreviation Code	Abbreviation Description
MIN	Minutes
MKR	Marker radio beacon
MLS	Microwave landing system
MM	Middle marker
MNM	Minimum
MNPS	Minimum navigation performance specifications
MNT	Monitor or monitoring or monitored
MNTN	Maintain
MOA	Military operating area
MOC	Minimum obstacle clearance (required)
MOD	Moderate (used to indicate the intensity of weather phenomena, interference or static reports, e.g. MOD RA=moderate rain)
MOD*	Ministry of Defence
MON	Above mountains
MON	Monday
MOTNE	Meteorological Operational Telecommunications Network Europe
MOV	Move or moving or movement
MPS	Metres per second
MRA	Minimum reception altitude
MRG	Medium range
MRP	ATS/MET reporting point
MRT*	Mountain Rescue Team
MS	Minus
MSA	Minimum sector altitude
MSAW	Minimum safe altitude warning
MSG	Message
MSL	Mean sea level
MT	Mountain
MTU	Metric units
MTW	Mountain waves
MVDF	Medium and very high frequency direction-finding stations (at the same location)
MWO	Meteorological watch office

Abbreviation Code	Abbreviation Description
MX	Mixed type of ice formation (white and clear)
N	North or northern latitude
N	No distinct tendency (in RVR during previous 10 minutes)
N/A*	Not applicable
NAT	North Atlantic
NAV	Navigation
NB	Northbound
NBFR	Not before
NC	No change
NDB	Non-directional radio beacon
NE	North-east
NEB	North-eastbound
NEG	No or negative or permission not granted or that is not correct
NGT	Night
NIL	None or I have nothing to send to you
NM	Nautical miles
NML	Normal
NNE	North north east
NNW	North north west
NOC*	No objection certificate
NOF	International NOTAM office
NOSIG	No significant change (used in trend-type landing forecasts)
NOTAM	A notice containing information concerning the establishment, condition or change in any aeronautical facility, service, procedure or hazard, the timely knowledge of which is essential to personnel concerned with flight operations
NOV	November
NR	Number
NRH	No reply heard
NS	Nimbostratus
NSC	Nil significant cloud
NSW	Nil significant weather
NW	North-west

Abbreviation Code	Abbreviation Description
NWB	North-westbound
NXT	Next
OAC	Oceanic area control centre
OAMC*	Oman Airports Management Company S.A.O.C
OAS	Obstacle assessment surface
OAS*	Oman Aviation Service Company
OBS	Observe or observed or observation
OBSC	Obscure or obscured or obscuring
OBST	Obstacle
OCA	Obstacle clearance altitude
OCA	Oceanic control area
OCC	Occulting (light)
OCH	Obstacle clearance height
OCL	Obstacle clearance limit
OCNL	Occasional or occasionally
OCR*	Oman Coastal Regiment
OCS	Obstacle clearance surface
OCT	October
OFTS*	Operational fixed telecommunication service
OFZ	Obstacle free zone
OHD	Overhead
OM	Outer marker
OMR*	Rial Omani
OPA	Opaque, white type of ice formation
OPC	The control indicated is operational control
OPMET	Operational meteorological (information)
OPN	Open or opening or opened
OPR	Operator or operate or operative or operating or operational
OPS	Operations
O/R	On request
ORD	Indication of an order
OSV	Ocean station vessel
OTLK	Outlook (used in SIGMET messages for volcanic ash and tropical cyclones)

Abbreviation Code	Abbreviation Description
OTP	On top
OTS	Organized track system
OUBD	Outbound
OVC	Overcast
P...	Prohibited area (followed by identification)
PACA	Public Authority for Civil Aviation
PALS	Precision approach lighting system (specify category)
PANS	Procedures for air navigation services
PAPI	Precision approach path indicator
PAR	Precision approach radar
PARL	Parallel
PAX	Passenger(s)
PCD	Proceed or proceeding
PCN	Pavement classification number
PDO*	Petroleum Development (Oman) Limited
PE	Ice pellets
PER	Performance
PERM	Permanent
PJE	Parachute jumping exercise
PLA	Practice low approach
PLVL	Present level
PN	Prior notice required
PNR	Point of no return
PO	Dust devils
PO*	Post Office
POB	Persons on board
POSS	Possible
PPI	Plan position indicator
PPR	Prior permission required
PPSN	Present position
PRI	Primary
PRKG	Parking
PROB	Probability
PROC	Procedure

Abbreviation Code	Abbreviation Description
PROV	Provisional
PS	Plus
PSG	Passing
PSN	Position
PSP	Pierced steel plank
PTN	Procedure turn
PTS	Polar track structure
PWR	Power
QBI	Compulsory IFR flight
QDM	Magnetic heading (zero wind)
QDR	Magnetic bearing
QFE	Atmospheric pressure at aerodrome elevation (or at runway threshold)
QFU	Magnetic orientation of runway
QNH	Altimeter sub-scale setting to obtain elevation when on the ground
QTE	True bearing
QUAD	Quadrant
R	Red
R...	Restricted area (followed by identification)
R	Right (runway identification)
RA	Rain
RAFC	Regional area forecast centre
RAFO*	Royal Air Force Oman
RAD*	Approach radar control
RAG	Ragged
RAG	Runway arresting gear
RAO*	Royal Army of Oman
RB	Rescue boat
RCA	Reach cruising altitude
RCC	Rescue co-ordination centre
RCF	Radio communication failure (message type designator)
RCH	Reach or reaching
RCL	Runway centre line
RCLL	Runway centre line light(s)

Abbreviation Code	Abbreviation Description
RCLR	Recleared
RDH	Reference datum height (for ILS)
RDL	Radial
RDO	Radio
RE...	Recent (used to qualify weather phenomena, e.g. RERA=recent rain)
REC	Receive or receiver
REDL	Runway edge light(s)
REF	Reference to ... or refer to ...
REG	Registration
RENL	Runway end light(s)
REP	Report or reporting or reporting point
REQ	Request or requested
RERTE	Reroute
RETIL	Rapid exit taxiway indicator lights
RF*	Royal Flight of Oman
RG	Range (lights)
RIF	Reclearance in flight
RITE	Right (direction of turn)
RIV*	Rapid intervention vehicle
RL	Report leaving
RLA	Relay to
RLCE	Request level change en route
RLLS	Runway lead-in lighting system
RLNA	Request level not available
RMK	Remark
RNAV	(to be pronounced "AR_NAV") Area navigation
RNG	Radio range
RNO*	Royal Navy of Oman
RNP	Required navigation performance
ROBEX	Regional OPMET bulletin exchange (scheme)
ROC	Rate of climb
ROD	Rate of descent
ROFOR	Route forecast (in aeronautical meteorological code)

Abbreviation Code	Abbreviation Description
RON	Receiving only
ROP*	Royal Oman Police
RPL	Repetitive flight plan
RPLC	Replace or replaced
RPS	Radar position symbol
RQMNTS	Requirements
RQP	Request flight plan (message type designator)
RQS	Request supplementary flight plan (message type designator)
RR	Report reaching
RRA	(or RRB, RRC ... etc., in sequence) Delayed meteorological message (message type designator)
RSC	Rescue sub-centre
RSCD	Runway surface condition
RSP	Responder beacon
RSR	En-route surveillance radar
RTD	Delayed (used to indicate delayed meteorological message; message type designator)
RTE	Route
RTF	Radiotelephone
RTG	Radiotelegraph
RTHL	Runway threshold light(s)
RTIL	Runway threshold identification light(s)
RTN	Return or returned or returning
RTS	Return to service
RTT	Radio teletypewriter
RTZL	Runway touchdown zone light(s)
RUT	Standard regional route transmitting frequencies
RV	Rescue vessel
RVR	Runway visual range
RWY	Runway
S	South or southern latitude
SA	Sand
SALS	Simple approach lighting system
SAN	Sanitary

Abbreviation Code	Abbreviation Description
SAR	Search and rescue
SARPS	Standards and Recommended Practices (ICAO)
SAT	Saturday
SATCOM	Satellite communication
SB	Southbound
SC	Stratocumulus
SCT	Scattered
SDBY	Stand by
SE	South-east
SEA*	South East Asia
SEB	South-eastbound
SEC	Seconds
SECT	Sector
SELCAL	Selective calling system
SEP	September
SER	Service or servicing or served
SEV	Severe (used e.g. to qualify icing and turbulence reports)
SFC	Surface
SG	Snow grains
SGL	Signal
SH	... Showers (followed by RA=rain, SN=snow, PE=ice pellets, GR=hail, GS=small hail and/or snow pellets or combinations thereof, e.g. SHRASN=showers of rain and snow)
SHF	Super high frequency (3 000 to 30 000 MHz)
SID	Standard instrument departure
SIF	Selective identification feature
SIGMET	Information concerning en-route weather phenomena which may affect the safety of aircraft operations
SIGWX	Significant weather
SIMUL	Simultaneous or simultaneously
SITA*	Societe Internationale de Telecommunications Aeronautiques
SIWL	Single isolated wheel load
SKC	Sky clear
SKED	Schedule or scheduled

Abbreviation Code	Abbreviation Description
SLOP	Strategic lateral offset procedures
SLP	Speed limiting point
SLW	Slow
SMC	Surface movement control
SMR	Surface movement radar
SN	Snow
SOA*	Sultan of Oman Artillery
SOPR*	Sultan of Oman's Parachute Regiment
SPECI	Aerodrome special meteorological report (in meteorological code)
SPECIAL	Local special meteorological report (in abbreviated plain language)
SPL	Supplementary flight plan (message type designator)
SPOT	Spot wind
SQ	Squall
SR	Sunrise
SRA	Surveillance radar approach
SRE	Surveillance radar element of precision approach radar system
SRG	Short range
SRR	Search and rescue region
SRY	Secondary
SS	Sandstorm
SS	Sunset
SSB	Single sideband
SSE	South south east
SSR	Secondary surveillance radar
SST	Supersonic transport
SSW	South south west
ST	Stratus
STA	Straight in approach
STAR	Standard instrument arrival
STD	Standard
STF	Stratiform
STN	Station

Abbreviation Code	Abbreviation Description
STNR	Stationary
STOL	Short take-off and landing
STS	Status
STWL	Stopway light(s)
SUBJ	Subject to
SUN	Sunday
SUP	Supplement (AIP Supplement) SUPPS Regional supplementary procedures
SVC	Service message
SVCBL	Serviceable
SVFR*	Special visual flight rules
SW	South-west
SWB	South-westbound
SWY	Stopway
T	Temperature
TA	Transition altitude
TACAN	UHF tactical air navigation aid
TAF	Aerodrome forecast
TAIL	Tail wind
TAR	Terminal area surveillance radar
TAS	True airspeed
TAX	Taxiing or taxi
TC	Tropical cyclone
TCH	Threshold crossing height
TCU	Towering cumulus
TDO	Tornado
TDZ	Touchdown zone
TECR	Technical reason
TEL	Telephone
TEMPO	Temporary or temporarily
TEND	Trend forecast
TFC	Traffic
TGL	Touch-and-go landing
TGS	Taxiing guidance system

Abbreviation Code	Abbreviation Description
THR	Threshold
THRU	Through
THU	Thursday
TIL	Until
TIP	Until past ... (place)
TKOF	Take-off
TL	... Till (followed by time by which weather change is forecast to end)
TLOF	Touchdown and lift-off area
TMA	Terminal control area
TNA	Turn altitude
TNH	Turn height
TO	To ... (place)
TOC	Top of climb
TODA	Take-off distance available
TODAH	Take-off distance available, helicopter
TOP	Cloud top
TORA	Take-off run available
TP	Turning point
TR	Track
TRA	Temporary reserved airspace
TRANS	Transmits or transmitter
TRL	Transition level
TROP	Tropopause TS Thunderstorm (in aerodrome reports and forecasts, TS used alone means thunder heard but no precipitation at the aerodrome)
TS	... Thunderstorm (followed by RA=RAIN, SN=snow, PE=ice pellets, GR=hail, GS=small hail and/or snow pellets or combinations thereof, e.g. TSRASN=thunderstorm with rain and snow)
TT	Teletypewriter
TUE	Tuesday
TURB	Turbulence
TVOR	Terminal VOR
TWR	Aerodrome control tower or aerodrome control
TWY	Taxiway

Abbreviation Code	Abbreviation Description
TWYL	Taxiway-link
TYP	Type of aircraft
TYPH	Typhoon
U	Upward (tendency in RVR during previous 10 minutes)
UA	Unmanned aircraft
UAB	Until advised by ...
UAC	Upper area control centre
UAR	Upper air route
UDF	Ultra high frequency direction-finding station
UFN	Until further notice
UHDT	Unable higher due traffic
UHF	Ultra high frequency (300-3 000 MHz)
UIC	Upper information centre
UIR	Upper flight information region
UK*	United Kingdom
ULR	Ultra long range
UNA	Unable
UNAP	Unable to approve
UNL	Unlimited
UNLGTD*	Unlighted
UNREL	Unreliable
U/S	Unserviceable
UTA	Upper control area
UTC	Co-ordinated Universal Time
VA	Volcanic ash
VAC	Visual approach chart
VAL	In valleys
VAN	Runway control van
VAR	Magnetic variation
VAR	Visual-aural radio range
VASIS	Visual approach slope indicator system
VC	Vicinity of the aerodrome (followed by FG=fog, FC=funnel cloud, SH=showers, PO=dust/sand whirls, BLDU=blowingdust, BLSA=blowing sand or BLSN=blowing snow, e.g. VCFG=vicinity fog)

Abbreviation Code	Abbreviation Description
VCY	Vicinity
VDF	Very high frequency direction-finding station
VER	Vertical
VFR	Visual flight rules
VHF	Very high frequency (30-300 MHz)
VIA	By way of...
VIP	Very important person
VIS	Visibility
VLF	Very low frequency (3 to 30 KHz)
VLR	Very long range
VMC	Visual meteorological conditions
VNAV	(to be pronounced “VEE-NAV”) Vertical Navigation
VOLMET	Meteorological information for aircraft in flight
VOR	VHF omnidirectional radio range
VORTAC	VOR and TACAN combination
VOT	VOR airborne equipment test facility
VRB	Variable
VSA	By visual reference to the ground
VSP	Vertical speed
VTOL	Vertical take-off and landing
W	West or western longitude
W	White
WAC	World aeronautical chart - ICAO 1:1 000 000
WAFC	World area forecast centre
WB	Westbound
WBAR	Wing bar lights
WDI	Wind direction indicator
WDSPR	Widespread
WED	Wednesday
WEF	With effect from or effective from
WGS-84	World Geodetic System - 1984
WHO*	World Health Organisation
WI	Within
WID	Width

Abbreviation Code	Abbreviation Description
WIE	With immediate effect or effective immediately
WILCO	Will comply
WINTEM	Forecast upper wind and temperature for aviation
WIP	Work in progress
WKN	Weaken or weakening
WNW	West north west
WO	Without
WPT	Way-point
WRNG	Warning
WS	Wind shear
WSW	West south west
WT	Weight
WTSPT	Waterspout
WX	Weather
WXR	Weather radar
X	Cross
XBAR	Crossbar (of approach lighting system)
XNG	Crossing
XS	Atmospherics
Y	Yellow
YCZ	Yellow caution zone (runway lighting)
YR	Your
Z	Co-ordinated Universal Time (in meteorological messages)

*Not ICAO

GEN 2.3 CHART SYMBOLS

CHART SYMBOLS

Runway Pattern

Civil Aerodrome

Aerodrome with no facilities

Abandoned Aerodrome

Heliport or Helicopter Alighting Area on an Aerodrome

VOR

VOR/DME

NDB or Locator

NDB or Locator plus Marker

Marker

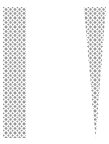
Radio Facility

Navaid facility box used for instrument approach procedure includes facility type, name, frequency and ident.

Navaid facility box **not** used for instrument approach procedure includes facility type, name, frequency and ident.

ILS LOC

Profile section (IAL) ILS GP



Profile section (IAL) VOR, VOR/DME, NDB, Locator, Marker

Prohibited/Restricted/ Danger Areas

Two areas with common boundary

Obstruction

Lighted Obstruction

Spot Elevation

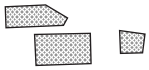
Highest Elevation on Chart

Aeronautical Ground Light

Transmission Line or overhead Cable

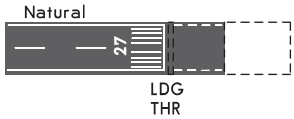
Road

Dual or Triple Highway

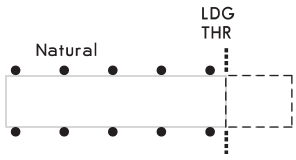


Built-Up Area

Buildings



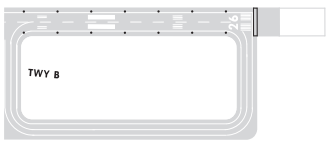
Paved Runway with Stopway and displaced Landing Threshold



Unpaved Runway with Stopway and displaced Landing Threshold

Runway under Construction

Disused Movement Area



Taxiway with Designation, Apron

Taxiway/Apron under Construction

Runway Visual range (RVR) Observation Site

Runway-holding positions

Pattern A

Pattern B
(used when instructed by ATC)

Intermediate taxiway holding position

RNAV Fly-Over compulsory WPT

RNAV Fly-Over non-compulsory WPT

RNAV Fly-By compulsory WPT

RNAV Fly-By non-compulsory WPT

GEN 2.4 LOCATION INDICATORS

Location indicators marked with an asterisk (*) cannot be used in the address component in AFS messages.

1. ENCODE	
Indicator	**Location**
OOAD	Adam
OOBB*	Butabul
OOBR*	Buraimi
OODQ*	Duqm
OOFD*	Fahud
OOGB*	Qarn Alam
OOIA*	Ibra
OOII*	Ibri
OOIZ*	Izki
OOJA*	Ja’aluni
OOJN*	Jarf North
OOKB*	Khasab
OOLK*	Lekhwair
OOMA*	Masirah
OOMK*	Mukhaizna
OOMM	MUSCAT FIR
OOMN*	Musana
OOMS	MUSCAT / Muscat Intl
OOMX*	Marmul
OONZ*	Nizwa
OORQ*	Rostaq
OOSA	Salalah
OOSH*	Suhar
OOSQ*	Saiq
OOTH*	Thumrait

2. DECODE

GEN 2.7 SUNRISE SUNSET

The times in these tables are given in UTC for sunrise (SR) and sunset (SS) and are from the years 2021 to 2025 inclusive. The year 2023 is used as an "average year" for this period. During this period the times for an arbitrary date and place will deviate less than 2 minutes from time on the same date and place in the "average year".

GEN 3 SERVICES

GEN 3.1 AERONAUTICAL INFORMATION SERVICES

1. RESPONSIBLE SERVICE

The Aeronautical Information Management which forms part of CAA ensures the flow of information necessary for the safety, regularity and efficiency of international and national air navigation within the area of its responsibility as shown under GEN 3.1 paragraph 2.

1.1 AIM Department

Postal Address: P. O. Box 758
POSTAL CODE 111
MUSCAT
Sultanate of Oman
Telephone: (968) 24 354955
Email: sdc@caa.gov.om

1.2 NOTAM Office (NOF)

Postal Address: P. O. Box 758
POSTAL CODE 111
MUSCAT
Sultanate of Oman
AFS Address: OOMSYNYX
Telephone: (968) 24 354949
(968) 24 354948
Email: briefing@caa.gov.om

2. AREA OF RESPONSIBILITY

The AIM is responsible for the collection and dissemination of information for the entire territory of Oman and for the airspace over the high seas encompassed by the Muscat Flight Information Region.

3. AERONAUTICAL PUBLICATION

3.1 The aeronautical information is provided in the form of aeronautical information products in a standardized presentation consisting of the following elements:

a) Aeronautical Information Publication (AIP);

b) AIP Amendment Service (AIP AMDT);

c) AIP Supplement (AIP SUP);

d) NOTAM;

e) Aeronautical Information Circulars (AICs); and

f) Aeronautical Charts.

NOTAM and the relatetd monthly checklists are issued via the AFS.

4. DISTRIBUTION OF PUBLICATIONS

4.1 AIM Publication

All AIM publications are available on CAA website: https://aim.caa.gov.om/

4. 2 NOTAM

NOTAM are used mainly for notification of temporary information of timely significance, unforeseen changes in service abilities etc., or any other emergency; they are distributed by NOF as follows:

a) Series A-NOTAM containing full information on all airports, facilities and procedures available for use by international civil aviation, promulgated both internationally and nationally.

b) Series B-NOTAM containing information of concern to aircraft other than those engaged in international civil aviation, promulgated nationally.

c) Series S-SNOWTAM information providing a runway surface condition report notifying the presence or cessation of hazardous condition due to standing water on the movement area. SNOWTAM are prepared in accordance with PANS-AIM, Appendix 4, and are issued for individual aerodrome by Muscat NOF with separate serial number.

The international NOTAM office will allocate to each NOTAM a series identified by a letter and a four-digit number followed by a stroke and a two-digit number of the year. The four-digit number will be consecutive and based on the calendar year.

A checklist of valid NOTAM is issued as a NOTAM checklist at intervals of not more than one month.

NOTAMs are exchanged between Muscat NOF and other NOF as follows:

5. THE AIRAC SYSTEM

5.1 In order to control and regulate the flow of changes requiring amendments to charts, route-manuals etc., such changes, whenever possible, will be issued.

5.2 AIRAC information will be issued so that the information will be received by the user not later than 28 days, and for major changes not later than 56 days, before the effective date.

SCHEDULE OF AIRAC EFFECTIVE DATES

2023	2024	2025	2026	2027

GEN 3.2 AERONAUTICAL CHARTS

1. RESPONSIBLE AUTHORITY

1.1 The CAA provides a wide range of aeronautical charts for use by all types of civil aviation. The AIM produces the charts which are part of the AIP. Charts suitable for pre-flight planning and briefing are available for reference at the AIS office at Muscat International and Salalah International Airports.

1.2 The charts are produced in accordance with the provisions in the following ICAO documents:

Annex4	Aeronautical Charts.
Doc 8697	Aeronautical Chart Manual
Doc 8168	Aircraft Operations, Vol. II (Construction of visual and instrument flight procedures)

1.3 Differences from ICAO Standards Recommended Practices and Procedures are given in GEN 1.7.

2. MAINTENANCE OF CHARTS

2.1 The charts listed in 4.1 are regularly kept up to date or are replaced by AIP amendments. Significant amendments or revisions will be promulgated by AIP SUPPLEMENTS or NOTAM and included in subsequent AIP amendments, if appropriate. Information concerning new aeronautical charts will be notified by AIC.

2.2 Items of information found, after publication, to have been incorrect at the aeronautical information date are corrected immediately by NOTAM if they are of operational significance, attention being directed to that chart affected.

3. PURCHASE ARRANGEMENTS

3.1 The charts listed in 4.1 may be obtained from the:

Civil Aviation Authority
P. O. Box 1
POSTAL CODE 111
MUSCAT
Sultanate of Oman

A limited supply of these charts is also available from the NOF at Muscat Intl Airport.

4. AERONAUTICAL CHARTS SERIES AVAILABLE

4.1 The following are produced and published by the CAA:

a) Aerodrome Obstacle Chart - ICAO Type A

b) Aerodrome Obstacle Chart - ICAO Type B

c) Precision Approach Terrain Chart - ICAO

d) Enroute Charts - ICAO

e) Terminal Area Chart - ICAO

f) Standard Departure Chart Instrument (SID) - ICAO

g) Standard Arrival Chart Instrument (STAR) - ICAO

h) Instrument Approach Chart - ICAO

i) Visual Approach Chart - ICAO

j) Aerodrome Chart - ICAO

k) Aerodrome Ground Movement Chart - ICAO

l) Aircraft Parking/Docking Chart - ICAO

m) World Aeronautical Chart - ICAO 1:1 000 000

n) ATC Surveillance Minimum Altitude Chart - ICAO

Note: Not all these charts are produces for each aerodrome. Charts are produced when required in accordance with Annex 4 Standards and Recommended Practices.

4.2 General description of each series:

a) Aerodrome Obstacle Chart - ICAO Type A

These are available for ADs designated for use by international commercial air transport. The scales used are 1 : 20 000 (horizontal) and 1 : 2 000 (vertical). The charts, showing a plan and profile of each RWY (including any associated SWY and CWY), take-off flight path area, any significant obstructions and relevant declared distances, are included in AD 2.

b) Aerodrome Obstacle Chart - ICAO Type B

These charts at scale of 1:20 000 show the topography and the obstacles in the vicinity of the

airport. They are intended to be used by and to assist flight crews in determination of the minimum safe altitude/height during departure and arrival phase including those for circling procedures the pre-determination of procedures for use in the event of an emergency during take-off or landing and are included in AD 2.

c) Precision Approach Terrain Chart - ICAO

These charts provide detailed terrain profile information within a defined portion of the final approach so as to enable aircraft operating agencies to assess the effect of the terrain on decision height determination by the use of radio altimeters. Those published are included in AD 2.

d) Enroute Charts - ICAO

This chart is produced for the entire Oman FIR. The aeronautical data include all aerodrome, prohibited, restricted and danger areas and the air traffic service systems in detail. The chart provides the flight crew with information that will facilitate navigation along ATS routes in compliance with air traffic services procedures.

e) Terminal Area Chart - ICAO

These are available for Muscat TMA and depict arrival, departure and transit routes and holding patterns. They are designed to facilitate transition between Radio Navigation Charts and Instrument Approach Charts and are included in AD 2.

f) Standard Departure Chart Instrument (SID) - ICAO

These charts are produced whenever a standard departure route - instrument has been established and cannot be shown with sufficient clarity on the Area Chart - ICAO.

The aeronautical data shown include the aerodrome of departure, aerodrome(s) which affect the designated standard departure route - instrument, prohibited, restricted and danger areas and the air traffic services system. This chart provides the flight crew with information that will be enable them to comply with the designated standard departure route - instrument from the take-off phase to the enroute phase. Those published are included in AD 2.

g) Standard Arrival Chart Instrument (STAR) - ICAO

These charts are produced whenever a standard arrival route - instrument has been established and cannot be shown with sufficient clarity on the Area Chart - ICAO.

The aeronautical data shown include the aerodrome of landing, aerodrome(s) which affect the designated standard arrival route - instrument, prohibited, restricted and danger areas and the air traffic services system. This chart provides flight crew with information that will enable them to comply with the designated standard arrival route - instrument from the enroute phase to the approach phase. Those published are included in AD 2.

h) Instrument Approach Chart - ICAO

These are available for ADs where instrument approach procedures have been established and approved by the Flight Operations Section of the CAA. A separate chart is published for each

procedure showing plan and profile views of holding, approach and missed approach, radio facilities and relevant topographical information. Those published are included in AD 2.

i) Visual Approach Chart - ICAO

These are designed to provide pilots with a graphic presentation of approaches to ADs by visual reference, whether or not previous reference has been made to either a Radio or Visual Navigation Chart. Those published are included in AD 2.

j) Aerodrome Chart - ICAO

These are available for ADs designated for use by international commercial air transport and are designed to facilitate ground movement between RWYs and aprons. They show a plan view of the movement area and depict visual aids, radio installations, terminal buildings, ARP, RWY marking, lighting and, at an enlarged scale TWY and apron marking.

k) Aerodrome Ground Movement Chart - ICAO

This supplementary chart shall provide flight crews with detailed information to facilitate the ground movement of aircraft to and from the aircraft stands and the parking/ docking of aircraft.

l) Aircraft Parking/Docking Chart - ICAO

This chart is produced for those aerodromes where, due to complexity of the terminal facilities, the information cannot be shown with sufficient clarity on the Aerodrome/ Heliport Chart - ICAO.

This supplementary chart provides flight crews with detailed information to facilitate the ground movement of aircraft between the taxiways and the aircraft stands and the parking/docking of aircraft. Those published are included in AD 2.

m) World Aeronautical Chart - ICAO 1 : 1 000 000

These are published by Oman Authorities and available from the Civil Aviation Authority listed in 3.1. They constitute the Oman territory. Designed for pre-flight planning and pilotage, they are constructed on the Lambert Conformal Conic Projection and depict the main planimetric features and relief data and basic aeronautical information.

n) ATC Surveillance Minimum Altitude Chart - ICAO

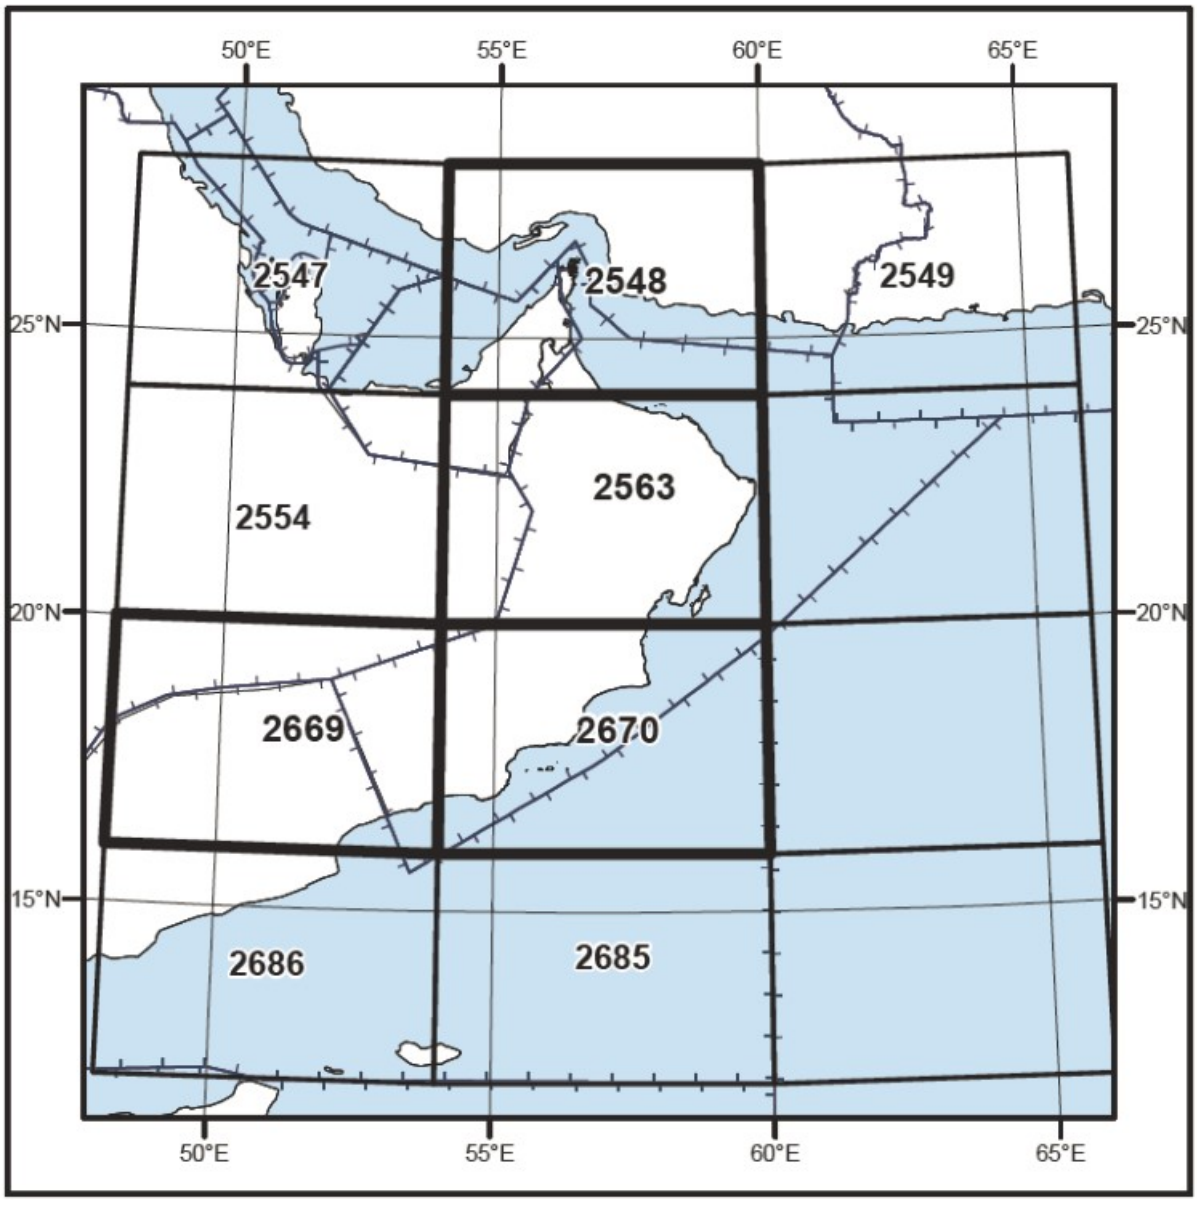
This chart is supplementary to the Area Chart and provides information which will enable flight crews to monitor and cross-check altitudes assigned while under radar control.

5. LIST OF AERONAUTICAL CHARTS AVAILABLE

A list of the available aeronautical charts can be found in the table below,
ENR 6 and appropriate AD 2.24 sections.

TITLE OF SERIES	SCALE	CHART NAME AND/OR NUMBER		PRICE PER SHEET RO.	DATE
World Aeronautical Chart-ICAO (WAC)	1:1 000 000	WORLD AERONAUTICAL CHART	2548-2563-2669-2670	70 OMR	5 OCT 23

6. INDEX TO THE WORLD AERONAUTICAL CHART (WAC) - ICAO 1:1 000 000



7. TOPOGRAPHICAL CHARTS

Not available.

8. CORRECTIONS TO CHARTS NOT CONTAINED IN THE AIP

8.1 Amendments to aeronautical data are included in other sections of this AIP without specific reference to the charts affected. Only obstacles of a height of 100M (328 FT) or more above ground (AGL) are depicted on WAC. The coordinates used are not necessarily derived from a WGS-84 survey made to aeronautical data quality standards.

8.2 Obstacles exceeding heights of 100M (328 FT) AGL reported to AIM Department that are not depicted on the WAC:

Nil

GEN 3.3 AIR TRAFFIC SERVICES

1. RESPONSIBLE AUTHORITY

The authority responsible for the overall administration of ATS provided for international civil aviation within the Muscat FIR is the CAA.

Postal Address: Civil Aviation Authority (CAA)
P. O. Box 1
POSTAL CODE 111
MUSCAT
Sultanate of Oman
Telephone: (968) 24 354860
Telefax ACC: (968) 24 354533
Telefax COMM: (968) 24 354535
Email: Nil

2. AREA OF RESPONSIBILITY

ATS, as indicated in the following paragraphs, are provided for the entire territory including its territorial waters of Oman as well as the airspace over the high seas encompassed by Muscat FIR.

In some cases, in accordance with the regional air navigation agreement, air traffic services are provided, under the delegated authority, in the airspace within another bordering FIR.Details of such services are provided in section ENR 2.

3. TYPES OF SERVICE

The following types of services are provided:

a) Approach Control (APP) (Surveillance)

b) Area Control (ACC) (Surveillance); and

c) Flight Information Service (FIS) and Alerting Service (ALRS).

With the exception of services provided at military air bases, the following types of services are provided at aerodromes:

a) Aerodrome Control (TWR);

b) Aerodrome Flight Information Service (AFIS); and

c) Automatic Terminal Information Service (ATIS), at certain aerodromes.

4 AIR TRAFFIC SERVICES

4.1 With the exception of certain military aerodromes, ATS in the Muscat FIR are provided by the CAA. Aerodrome Flight Information Services are provided by certain private aerodrome operators as notified in AD 2.

4.2 ATC Service within the Muscat FIR is exercised:

a) on AWYs covering the main ATS routes; and

b) in UTA, TMA, CTR and at controlled aerodromes equipped with approach and landing aids.

4.3 Flight information and alerting services within the FIR and ATC service within CTA is provided by one centre (ACC Muscat). IFR are mandatory at FL150 and above. The axis of each airway is constituted by a line connecting significant points.

4.4 Air traffic control, flight information and alerting services are provided by:

a) ACC Muscat along the airways, including those parts traversing terminal control areas.

b) The relevant APP and TWR units, in coordination with ACC Muscat as necessary, for arriving and departing aircraft.

4.5 Radar service is an integral part of the ATS system. A description of radar services and procedures is provided in ENR 1.6. Additional procedures applicable to CTR Salalah are contained in AD 2.OOSA.

4.6 The description of the airspace designated for ATS purposes, either in chart or tabular form, is found in ENR 2, 3 or ENR 6, as appropriate.

4.7 In general, the air traffic rules and procedures in force and the organization of ATS are in conformity with ICAO SARPS, PANS and SUPPS. Differences between national and international rules and procedures are given in GEN 1.7, the SUPPS and altimeter setting procedures being reproduced in full with an indication wherein there is a difference. Prohibited, Restricted and Danger Areas established within the Muscat FIR are shown in ENR 5. Activation of areas, subject to intermittent activity, is notified well in advance by NOTAM, giving reference to the area only by its identification.

4.8 Areas in which flight training activities are regularly conducted adjacent to controlled airspace are notified as Training Areas if designation as either Restricted or Danger Area is appropriate. Such areas are active as per the hours notified in ENR 5 or by NOTAM and are depicted on relevant charts in ENR 6.

4.9 Interception procedures and signals for use in the event of interception over the Sultanate of Oman and territorial waters are shown in ENR 1.12.

4.10 Aerodrome Flight Information Service (AFIS)

Aerodrome Flight Information Service (AFIS) is an information service provided at certain aerodromes by an Aerodrome Flight Information Officer (AFISO) to give information useful for the safe and efficient conduct of flights in the immediate aerodrome vicinity and to give taxi instructions on the apron and manoeuvring area. The service is easily identifiable by the call sign

suffix 'INFORMATION'. AFIS is available at aerodromes during the hours of operation indicated at AD 2. AFISO may pass ATC clearances on behalf of the Muscat ACC, and in so doing will clearly include in the message the callsign of the ATS issuing the clearance.

The AFISO is responsible for:

a. Issuing information to aircraft flying in the immediate aerodrome vicinity to assist pilots in preventing collisions;

b. issuing instructions and information to aircraft on the apron and manoeuvring area to assist pilots in preventing collisions between aircraft and vehicles/ obstructions on the manoeuvring area, or between aircraft moving on the apron;

c. issuing instructions to vehicles and persons on the manoeuvring area;

d. informing aircraft of essential aerodrome information (i.e. the state of the aerodrome and its facilities);

e. provision of an alerting service;

f. initiating overdue action.

5. COORDINATION BETWEEN THE OPERATOR AND ATS

5.1 This is effected in accordance with Annex 11, paragraph 2.15 and relevant portions of PANS-ATM (Doc 4444-ATM/501) Chapter 10, paragraph 10.2. Operators requiring the service prescribed in Annex 11, paragraph 2.12.1 and PANS-ATM Chapter 10, paragraph 10.2 should advise the CAA accordingly.

5.2 RPLs are no longer accepted in the Muscat FIR.

6. MINIMUM FLIGHT ALTITUDE

The minimum en-route levels on the AWY listed in ENR 3 have been determined so as to ensure on the basis of the lowest known MSL pressure values for the areas concerned, at least 2000 FT vertical clearance over mountainous terrain and 1000 FT elsewhere, above the highest obstacle within the AWY lateral limits and a 5 NM buffer area. Mountainous terrain is defined as all that which attains or exceeds an elevation of 5000 FT AMSL.

INTENTIONALLY

BLANK

GEN 3.4 COMMUNICATION SERVICES

1. RESPONSIBLE AUTHORITY

The authority responsible for the administration of CNS Services in the Muscat FIR is the CAA, a department of the Ministry of Transport and Communications.

Postal Address: Civil Aviation Authority
P. O. Box 1
POSTAL CODE 111
MUSCAT
Sultanate of Oman
Telephone: (968) 24 354865
Telefax: (968) 24 354506
Email: Nil

2. AREA OF RESPONSIBILITY

The communication services listed in paragraph 3. following are provided for aeronautical users within the Muscat FIR. Responsibility for the day-to-day operation of these services is vested in department of CNS, CAA. Inquiries, suggestions or complaints regarding aeronautical telecommunications services should be referred to the said officer or to CAA, as appropriate.

3. TYPES OF SERVICE

3.1 Radio Navigation Service

The following types of radio aids to navigation are available:

Instrument Landing System (ILS)

VHF Omnidirectional Radio Range (VOR)

Distance-Measuring Equipment (DME)

Surveillance Radar Element (SRE)

3.2 Mobile Service

The aeronautical stations maintain a continuous watch on their stated frequencies during the published hours of service unless otherwise notified.

An aircraft should normally communicate with the A/G control radio station that exercises control in the area in which the aircraft is flying. Aircraft shall maintain a continuous watch on the appropriate frequency of the control station and shall not abandon watch, except in an emergency, without informing the control radio station.

3.3 Fixed Service

Messages to be transmitted over the AFS (AFTN/ AMHS) are accepted only if they satisfy the requirements of:

a) Annex 10, Vol II, Chapter 3, 3.3;

b) are prepared in the form specified in ICAO Annex 10;

c) the text of an individual AFS message does not exceed 200 groups.

3.4 Broadcasting Service

Nil.

3.5 Interpilot Air-to-Air Communication

In accordance with regional agreements, 123.450 MHz is designated as the air-to-air VHF communications channel. Use of this channel will enable aircraft engaged in flights over remote and oceanic areas out of range of VHF ground stations to exchange necessary operational information and to facilitate the resolution of operational problems.

3.6 Language used: English.

4. REQUIREMENTS AND CONDITIONS

4.1 The requirements of the CAA for the carriage of radio equipment is contained in the Civil Aviation Regulations.

4.2 The prescribed radio equipment listed in Column 1 of the following table is hereby notified for the purposes of the aforementioned CAR in respect of flights conducted in the circumstances listed in Column 2 of the said table. The said equipment shall be serviceable at the time of flight. Unserviceability of equipment that precludes compliance with the following table requires immediate notification to the appropriate ATS unit.

Radio Equipment to be carried	Circumstances of Flight
Column1	**Column 2**
VHF RTF with appropriate frequencies listed in ENR 3 and the respective AD 2 section	IFR/VFR in CAS; SVFR in Salalah and Muscat CTR
VOR* ADF	IFR in CAS
DME*	IFR in CAS
SSR Transponder with Mode A 4096 Codes and Mode C capability	All aircraft entering or operating within the Muscat FIR.
ILS and MKR Receiver	When landing at Muscat or Salalah airports if prevailing meteorological conditions would require an instrument approach procedure to be carried out.

For the purpose of this sub-paragraph, CAS is deemed to include all AWYs on which a Control

Service is provided.

* Unless the appropriate air traffic control unit otherwise permits in relation to the particular flight and provided that the aircraft complies with any instructions which the air traffic control unit may give in the particular case.

5. APPLICABLE ICAO DOCUMENTS

The SARPS, PANS and SUPPS contained in the following documents are applied, with the exceptions (Differences) noted hereunder:

Annex 10	Aeronautical Telecommunications
Doc 7030	Regional Supplementary Procedures (SUPPS), Part 2
Doc 7910	Location Indicators
Doc 8400	ICAO Abbreviations and Codes (PANS-ABC)
Doc 8585	Designators for Aircraft Operating Agencies, Aeronautical Authorities and Services
Doc 8643	Aircraft Type Designators

5.1 Differences from ICAO SARPS, PANS and SUPPS

Nil.

6. EXPLANATION OF ENR 4.1 AND TABLES 18 AND 19 IN CHAPTER AD 2.

The coordinates listed in those tables refer to the transmitting antenna. With the exception of VHF marker beacons associated with ILS, geographical coordinates are provided for all radio navigation facilities. For the convenience of users a MAG bearing and distance from the ARP, or other appropriate location, is additionally provided in the remarks-column for facilities utilized in instrument approach procedures.

All facilities are operated by the CAA with the exception of those otherwise indicated in the remarks-column.

Facilities marked *are not approved for IFR operation and do not conform to CAA standards of maintenance and/or flight checks. Use of these facilities is at the risk of the user and the CAA accepts no responsibility for their use.

Unless otherwise specified, description of VOR/DME restrictions in the remarks-column relate to inclusive radials, clockwise directions and

GEN 3.5 METEOROLOGICAL SERVICES

1. RESPONSIBLE AUTHORITY

The meteorological services for civil aviation are provided by the Civil Aviation Authority.

Postal Address :

Directorate General of Meteorology (DGMet)

Civil Aviation Authority

P. O. Box 1, POSTAL CODE 111

MUSCAT, Sultanate of Oman

TEL : *(968) 24 354660*

Telefax:*(968) 24 348501*

AFS : *OOMSYMYX*

Email : *met_dir@met.gov.om*

Website :*www.met.gov.om*

2. AREA OF RESPONSIBILITY

Area meteorological watch is provided for the Muscat FIR.

3. TYPES OF SERVICE PROVIDED

Briefing and consultation for flight crew members is provided at Muscat International aerodrome and normally given by telephone. Personal briefing and consultation is available.

Flight documentation is provided on request for domestic flights. For international flights the flight documentation comprises a significant weather chart, an upper wind/air temperature chart and the latest available aerodrome forecast for the destination and, if required, for its alternate aerodromes.

In addition flight documentation is now available on our web site. Airline operators can access and download their flight documentation at any time they desire. However, Airline Operators will have to contact the Department of Meteorology to get their Username and Password respectively.

4. NOTIFICATION REQUIRED FROM OPERATORS

Notification from operators in respect of requirements for flight documentation is as follows:

a) International flights in excess of 1.000 NM - 2 hours prior to ETD;

b) International flights up to 1.000 NM - 1 1/2 hours prior to ETD;

c) Domestic flights - 1 hour prior to ETD.

5. OBSERVING SYSTEM AND OPERATING PROCEDURES

Surface wind is measured by Ultrasonic Wind Sensor normally located at a lateral distance of 150 M from the runway centreline.

Wind indicators are located in meteorological stations and in the appropriate ATS units (where established).

Visibility is normally estimated.

RVR is reported in steps of 25 M below 400 M. 50 M between 400 M to 800 M. Thereafter in steps of 100 M upto 1500 M.

Cloud heights are normally estimated. A ceilometer located at the ILS MM is utilized at Muscat and Salalah aerodromes.

Upper air analysis of atmospheric parameters at Muscat / Salalah aerodromes is achieved by Radiosonde stations located at Muscat and Salalah aerodromes.

Satellite images and meteorological data are received through Meteorological satellite ground receiving stations and sFTP Distribution System (SADIS) at Muscat International and Salalah aerodromes.

GTS, AFTN and Internet allows exchange of data between countries on an hourly basis.

Remotely sited sensors located as close as possible to the main runway are used to measure air temperature.

6. DATA PROCESSING AND FORECASTING SYSTEMS

A SADIS Workstation is used to intercept World Area Forecast System Products as well as OPMET data which is broadcast by UK Met Office.

A High Resolution Meso-Scale Regional Numerical Model has been operational since 1999. We run two domains of the Model. One is a 7 KM mesh resolution and the other one is a 2.8 KM mesh resolution. The forecast generated from the Model is up to 120 hours ahead. Beside we also run a Module Output Statistic in parallel to the output generated by the Models. The forecast generated by the Model gives a very useful guidance and early warning on occurrence of weather over Oman and Adjoining Countries as well over the surrounding Seas.

7. AIRCRAFT REPORTS REQUIRED FROM OPERATORS

Pursuant to Annex 3, 5.3.1, the making and transmission of AIREP is required at the following ATS reporting point: LOTAV.

The ATS/MET reporting points in respect of routes crossing the FIR are indicated in ENR 3.

8. APPLICABLE ICAO DOCUMENTS

The SARPS and SUPPS contained in the following documents are applied with the exceptions (Differences) noted hereunder:

Annex 3	Meteorological Service for International Air Navigation
Doc 7030	Regional Supplementary Procedures, Part 3

9. CLIMATOLOGICAL DATA

Climatological tables and summaries are available on request for most of the aeronautical stations.

10. METEOROLOGICAL OBSERVATIONS AND REPORTS

Name of station/ Location Indicator	Type & frequency of observation, autom. equip.	Types of MET reports Suppl. Info. incl.	Observation System & Site(s)	Hours of operation	Climatological INFO AVBL

11. VOLMET

11.1 VOLMET broadcasts are prefixed by the designator VOLMET and may contain:

a) METARs, SPECI and Trend Type Forecasts (TTF) and

b) advice regarding the availability of SIGMET.

11.2 Individual VOLMET broadcasts will not exceed 15 minutes duration.

11.3 Cloud types excepting cumulonimbus, will not be included in VOLMET broadcasts.

11.4 Reference to the need to amend the current aerodrome forecasts is not included in VOLMET broadcasts of trend type forecasts.

Specific information regarding VOLMET broadcasts is detailed in the following table.

Name of Station	Call Sign	Frequency MHz	Broadcast period	Hours of Service	Aerodrome included	Contents and Remarks
1	2	3	4	5	6	7
MUSCAT	MUSCAT VOLMET	127.400 MHz	H24	H24	Muscat and Salalah International,	METAR

GEN 3.6 SEARCH AND RESCUE

1. RESPONSIBLE AUTHORITY

The SAR service in the Muscat FIR is organised on behalf of the CAA by RAFO, which has responsibility for making the necessary facilities available.

Postal Address: Search and Rescue Coordination Centre HQ RAFO
P.O. Box 722
POSTAL CODE 111
MUSCAT
Sultanate of Oman
AFS Address: OOMSYCYX
FAX: (968) 24 334776

2. TYPES OF SERVICE

2.1 Details of the RCC and related rescue units are given in paragraph 7. In addition, various elements of ROP Directorate of Police Aviation, ROP Coast guard, RAO, RNO and merchant marine are available for SAR missions when required. The aeronautical, maritime and public telecommunications services are available to the SAR organization.

2.2 With the exception of a limited number of float equipped helicopters, amphibious aircraft are not available. Fixed wing aircraft are capable of carrying equipment for air dropping. This equipment consists of inflatable rubber dinghies, medical supplies, emergency rations and survival radio equipment.

2.3 Aircraft are equipped to communicate on 121.500 MHz, 123.100 MHz, 243.000 MHz and on 2182 KHz for communication with marine craft. UHF/DF is carried by aircraft.

3. SAR AGREEMENTS

Requests for entry of aircraft, equipment and personnel from other States to engage in search for aircraft in distress or to rescue survivors of aircraft accidents, should be transmitted to the RCC. Instructions as to the control which will be exercised on entry of such aircraft and/or personnel will be given by the RCC in accordance with a standing plan for the conduct of SAR in its area.

4. GENERAL CONDITIONS OF AVAILABILITY

Facilities dedicated solely for SAR purposes are not available. All facilities are adapted for SAR by training and equipment. The DRU, LRUs and MRT comprise trained volunteers and are activated as necessary.

5. APPLICABLE ICAO DOCUMENTS

The SARPS and SUPPS contained in the following documents are applied with the exceptions (Differences) noted hereunder:

Annex 12	Search and Rescue
Annex 13	Aircraft Accident Inquiry
Doc 7030	SUPPS, Part 1,7. Alerting and SAR Services applicable in the MID/SEA Region (page RAC 1-15)

6. DIFFERENCES FROM ICAO SARPS AND SUPPS

Differences from ICAO SARPS and SUPPS are given in GEN 1.7.

7. RESCUE COORDINATION CENTRE

7.1 Postal Address: Rescue Coordination Centre

HQ RAFO
P.O. Box 722
POSTAL CODE 111
MUSCAT
Sultanate of Oman
AFS Address: OOMSYCYX
Telephone: (968) 24 334211, 24 334212
Telefax: (968) 24 334776
E-mail: Rafo.aoc@mod.gov.om

7.2 SAR Area: Sultanate of Oman land and territorial water areas and the high seas within Muscat FIR. The contact point for Muscat FIR SAR COSPAS-SARSAT is the Oman Rescue Coordination Centre.

7.3 Responsible agency or department: RAFO

7.4 Name and location of RSC:

- RSC KHASAB

- RSC MASIRAH

- RSC MUSANA

- RSC SALALAH

7.5 Search and Rescue Units

Name	Location	Facilities	Remarks
1	2	3	4
MASIRAH	See GEN 3.6-5	HEL-M (SRG) LRU RB	
MUSANA	See GEN 3.6-5	HEL-M (SRG) C 130 (LRG) C 235 (MRG) LRU MRT	
SALALAH	See GEN 3.6-5	HEL-M (SRG) C-235 (MRG)	

8. PROCEDURES AND/OR SIGNALS EMPLOYED BY RESCUE AIRCRAFT

8.1 Procedures

Procedures for pilots-in-command observing an accident or intercepting a distress call and/or message as outlined in Annex 12, Chapter 5.

8.2 Communications

8.2.1 Transmission and reception of distress messages within the Oman SRR are handled in accordance with Annex 10, Chapter 5, 5.3.

8.2.2 For communication during SAR operations, the codes and abbreviations published in PANS-ABC (Doc 8400) are used.

8.2.3 Information concerning positions, call-signs, frequencies and hours of operation of Oman aeronautical stations is published in ENR 2.1 and in the AD 2 section of the respective aerodrome.

8.2.4 The frequency 121.500 MHz is guarded continuously by the ATSU at Muscat International airport and, during hours of service by Salalah ATSU.

8.2.5 When engaged in SAR activities, aircraft will use the prefix "RESCUE", followed by a serial number.

Example: "RESCUE 1", RESCUE 2" etc.

8.3 Search and Rescue Signals

8.3.1 The SAR signals to be used are those prescribed in Annex 12, Chapter 5, 5.10 and are shown below. Symbols shall be at least 2.5 metres (8 feet) long and shall be made as conspicuous as possible.

8.3.2 Symbols may be formed by any means such as strips of fabric, parachute material, pieces of wood, stones or similar material; marking the surface by trampling, or staining with oil, etc.

8.3.3 Attention to the signals may be attracted by other means such as radio, flares, smoke, reflected light, etc.

GROUND-AIR VISUAL SIGNAL CODE FOR USE BY SURVIVORS

No.	Message	Code Symbol
1	Require assistance	V
2	Require medical assistance	X
3	No or negative	N
4	Yes or affirmative	Y
5	Proceeding in this direction	↑

GROUND-AIR VISUAL SIGNAL CODE FOR USE BY RESCUE UNITS

No.	Message	Code Symbol
1	Operation completed	LLL
2	We have found all personnel	LL
3	We have found only some personnel	+ +
4	We are not able to continue. Returning to base.	X X
5	Have divided into two groups.Each proceeding in direction indicated.	
6	Information received that aircraft is inthis directi	→ →
7	Nothing found. Will continue tosearch.	N N

9. AIR TO GROUND SIGNALS

The following signals by aircraft mean that the ground signals have been understood:

a) HJ - rocking the aircraft's wings.

b) HN - flashing on and off twice the aircraft's landing lights or, if not so equipped, by switching on and off twice its navigation lights.

Lack of the above signal indicates that the ground signal is not understood.

GEN 4 CHARGES FOR AERODROMES/HELIPORT AND AIR NAVIGATION SERVICES

GEN 4.1 AERODROME/HELIPORT CHARGES

1. GENERAL

The charges set out hereunder are common to all CAA administered aerodromes except where it is stated to the contrary. Charges for services and facilities not mentioned (e.g., for carriage of baggage between aircraft and terminal buildings) may vary from aerodrome to aerodrome and information concerning such charges may be obtained at the aerodromes.

2. LANDING CHARGES

2.1 Basis

Landing charge shall be paid for the use of the runways and/or taxiways of an airport (including the lighting charges) and for the use of radio. The basis for the charge is the Maximum Take-Off Weight (MTOW) in the Certificate of Airworthiness what shall be provided by the airport user.

2.2 Calculation of the charge

In case of occasional, individual flights the mass of the given aircraft type derived from the ICAO Doc 7100 - Manual of Airport and Air Navigation Facility Tariffs, Selective Lift of maximum Licensed Take-Off Weights for Aircraft (Page 1-13 to 1-17) will be used for the calculation. Those airport users operating flights regularly, can submit the data (registration number, aircraft typemodel, take-off weight, noise emission data) of the aircraft they intend to operate at the airport in a format approved by the airport operator. The airport operator shall not be liable for damages arising from a failure to submit data, from the missing of the deadline for data submission, or from the submission of incorrect data; and the airport user cannot claim damages therefore. The list should be submitted to:

Oman Airports Management Company SAOC
Muscat Intl Airport
P.O. Box 1707
POSTAL CODE 111
MUSCAT
Sultanate of Oman

In case when the required data have not been submitted to the airport operator, by an operator having regular flights in Oman, aircraft's mass data derived from ICAO Doc 7100 will be used for calculation. The landing charge is payable for each 1,000 KGs of the aircraft's take-off mass. Each fraction of 1 metric ton (1,000 KGs) shall be counted as a whole metric ton. The landing charge shall also be paid if the aircraft touches down, including touch-and-go actions. Every 1,000 KG commenced shall be regarded as a whole.

Weight of Aircraft in KGs	Rate in OMR
up to 5,000	5.000 (minimum fee)
5,001 - 50,000	1.250
50,000 and above	1.375

Note: The calculation of the landing charges, will be made according to the respective band. For example, if an aircraft's MTOW 78 tons then each ton is multiplied by OMR 1.375.

2.3 Reductions

A rebate of 50% of the landing charge may be granted in respect of flights as follows:

a) Scheduled domestic operations, where commencement, intermediate and terminal points of the flight are within the Sultanate territory, provided application has been made in advance;

b) touch-and-go flights;

c) bona fide training or test flights, subject to prior notification to and approved by CAA;

d) aircraft compelled to return due to technical reasons or weather condition.

2.4 Exemptions:

The following aircraft shall be exempted from landing charge:

a) Royal, diplomatic or state aircraft on a reciprocal basis;

b) United Nations and Arab League aircraft;

c) Military aircraft of the United Arab Emirates, Bahrain, Qatar, Kuwait, Saudi Arabia and the United Kingdom on a reciprocal basis;

d) Aircraft engaged in Search and Rescue operations when providing a free service;

e) Test flights for calibration of airport instruments approved by the airport authority.

3. PARKING, HANGARAGE AND LONG-TERM STORAGE OF AIRCRAFT

3.1 Basis of calculation

All users of the airport shall be obliged to pay a parking charge based on the category of aircraft.

3.2 Aircraft Parking Rates

3.2.1 Remote stands:

First two (2) hours of parking is free of charge. Every additional four (4) hours thereafter:

Category of Aircraft	Rate in OMR
Category A, B,C	13.540
Category D, E,F	43.780

Irrespective of whether aircraft parking takes place in several remote stands (in this case the time spent on different parking positions is cumulative), parking for a period not exceeding two (2) hours shall be free of charge. For every four (4) hours thereafter the parking rate above will be charged.

In the case of parking for more than two (2) hours, the operator of the flight shall not be entitled to receive any discounts, therefore parking charges must be paid in full. In such cases, the basis for calculating the parking charge shall be the time of the aircraft’s occupying the stand.

3.2.2 Contact stands:

Contact stands are equipped with an aerobridge and this charge is payable when such stand is occupied regardless of using aerobridge or not. This charge includes the usage of 400 Hz power and air conditioning.

Aircraft weight in KGs	First 90 minutes (in OMR)	Every additional 30 minutes (in OMR)
Up to 100,000	40	25
Over 100,000	60	40

Aircraft parked both on a contact stand and on a remote position within a turnaround shall pay the relevant charge pursuant to this section 3.

3.3 Use of Visual Docking Guidance System (VDGS)

Regardless if the aircraft parked on remote or contact stand, OMR 6 is payable on departure for the use of VDGS.

3.4 Hangar Rates

None specified.

3.5 Long Term Parking

Aircraft operators intend to use the aerodrome as a base and park their aircraft frequently longer than 24 hours shall agree with the airport operator in a separate agreement. Otherwise the airport operator has the right to refuse to provide parking position. Technical AOG flights are exempt as long as the maintenance or the repair is not completed.

3.6 Reductions, applicable for using Remote stand (under point 3.2.1)

A rebate of 50% of the parking charge may be granted in respect of flights as follows:

a) Scheduled domestic operations, where commencement, intermediate and terminal points of the flight are within the Sultanate territory, provided application has been made in advance;

b) Bona fide training or test flights, subject to prior notification to and approved by CAA;

c) Aircraft compelled to return due to technical reasons or weather condition;

d) Test flights for calibration of airport instruments approved by the airport authority.

4. PASSENGER SERVICE CHARGE

4.1 Passenger service charge is payable by the airport users for every departing and departing transfer passenger:

4.2 Passenger Service Charge

Per Departing Passenger	Rate in OMR
International	10
Domestic	2
Transfer	5

Note: A transfer passenger is a passenger who changes flights at the airport within 24 hours from arrival, i.e. who arrives at the airport by a different flight to the one he leaves on.

Domestic transfer passenger is a transfer passenger who either arrive on a domestic or on an international flight and continue his/her journey on a domestic flight with the Sultanate territory.

4.3 Exemptions

a) Children under the age of 2;

b) Transit passengers;

c) Crew on duty.

Note: A transit passenger is a passenger who continues his/her journey by the aircraft of the same flight number as the one he/she has arrived on and do not leave the transit area of the airport.

5. INFRASTRUCTURE CHARGE

5.1 This charge is collected for the equipment and service provided to support passenger processing at any common touchpoint at the terminal building (check in desks, boarding gates, etc.) and for the use of baggage handling system.
5.2 It is payable by the airport users for every departing and departing transfer passenger:

Infrastructure Charge is OMR 2.2 / Embarking Passenger.

5.3 Exemptions

a) Children under the age of 2;

b) Transit passengers;

c) General Aviation Passengers.

Note: A General Aviation passenger is a passenger who arrives or departs to/from the airport on private or business jet/aircraft and do not hold any flight ticket.

6. CHARGES FOR INSPECTION SERVICES

None specified.

7. METHODS OF PAYMENT

7.1 Unless an alternative arrangement has been made, all charges for the use of the are payable by the pilot of the aircraft at the time of using the aerodrome or by pre-payment prior take-off. In addition to the currency specified, payment will be accepted in Pounds Sterling or American Dollars cash. Travelers cheques may be exchanged at the bank on arrivals.
7.2 In the case of approved regular users who have been granted credit facilities, on demand at the end of each calendar month in respect of charges accruing, during that month.
7.3 Until the settlement of the due charges, the aerodrome operator is entitled to prevent take-off, with regard to the safety of the flight.
7.4 In case of claims against the legal basis of the charges, payment and recovery, the Laws of Oman is to be applied.

GEN 4.2 AIR NAVIGATION SERVICES CHARGES

1. AIR NAVIGATION FACILITY CHARGES

1.1 Route Air Navigation Charges – Method of Calculation

(Aircraft weight factor) x (Great circle distance flown / 100) x (Unit rate of charge)

1.1.1 Aircraft weight factor

Aircraft weight factor is based on the group categories listed below:

Group A: Aircraft weight factor = 0.69

All helicopter types, ASTR, AT42, AT43, AT45, AT72, B350, BE10, BE20, BE40, C510, C525, C550, C56X, C650, C680, C750, CL30, CL60, CRJ2, DH8(X) (all series), E110, E120, E135, E145, E55P, F2TH, F900, FA20, FA50, GALX, H25(X) (all series), HA4T, J328, LJ55, LJ60, PAY1, SB20, SF34.

Group B: Aircraft weight factor = 0.89

AN74, B46(X) (all series), CRJ7, E170, E175, E190, FA7X, GL5T, GLEX, GLF(X) (all series), T134.

Group C: Aircraft weight factor = 1.15

A318, A319, A320, AN12, B73(X) (all series), IL18, MD8(X) (all series), MD90.

Group D: Aircraft weight factor = 1.22

A321, B72(X) (all series).

Group E: Aircraft weight factor = 1.44

A310, B75(X) (all series).

Group F: Aircraft weight factor = 1.54

A30(X) (all series), B76(X) (all series), DC8(X) (all series), IL76.

Group G: Aircraft weight factor = 1.71

A33(X) (all series), B78(X) (all series), L101.

Group H: Aircraft weight factor = 1.80

A340, A342, A343, A35(X) (all series), DC10, MD11.

Group I: Aircraft weight factor = 1.95

B741, B74R, B74S, B77(X) (all series).

Group J: Aircraft weight factor = 2.04

A345, A346, B742, B743, B744, B747.

Group K: Aircraft weight factor = 2.14

A124, B748.

Group L: Aircraft weight factor = 2.33

A225, A38(X) (all series).

Note: For aircraft types that are not included in groups A to L, the aircraft maximum take-off weight (MTOW) shall be applied as follows:

MTOW (kg)	Aircraft weight factor
0 to 25 000	0.69
25 001 to 50 000	0.89
50 001 to 75 000	1.15
75 001 to 100 000	1.22
100 001 to 150 000	1.44
150 001 to 200 000	1.54
200 001 to 250 000	1.71
250 001 to 300 000	1.80
300 001 to 350 000	1.95
350 001 to 400 000	2.04
400 001 to 450 000	2.14
450 001 or more	2.33

1.1.2 Great circle distance flown

a) In respect of an aircraft transiting the Muscat Flight Information Region (FIR), the great circle distance flown is the shortest distance in kilometres between the entry and exit points of the Muscat FIR.

b) In respect of an aircraft entering the Muscat FIR and landing at an airport within the Muscat FIR, the great circle distance flown is the shortest distance in kilometres between the FIR entry point and the aerodrome.

c) In respect of an aircraft departing an aerodrome within the Muscat FIR and exiting the Muscat

FIR, the great circle distance flown is the shortest distance in kilometres between the aerodrome and the FIR exit point.

d) In respect of an aircraft both departing from and arriving at an aerodrome within the Muscat FIR, the great circle distance flown is the shortest distance in kilometres between the aerodromes.

Note: The calculation of the (great circle distance flown/100) shall be carried to 2 decimal places.

1.1.3 Unit rate of charge

The unit rate of charge is 31.34 US Dollars ($).

1.1.4 Reductions

A reduction of 50% of the route air navigation charge will be granted in respect of international flights either departing from or arriving at an aerodrome within the Muscat FIR.

Domestic flights that are both departing from and arriving at an aerodrome within the Muscat FIR shall only be granted a single 50% reduction.

1.1.5 Route A 791 Flat Rate Charge

For aircraft utilizing route A 791 in either direction between LALDO and IMLOT there is a flat rate charge of 325.00 US Dollars ($).

1.1.6 Minimum charge

In all cases the minimum route air navigation charge of 100.00 US Dollars ($) shall apply.

1.2 Meteorology Charge

A meteorology charge of 13.00 US Dollars ($) will be applied to arriving, departing and overflying flights.

1.3 Charges billing and collection

Under the authority of the Minister of Transport and Communications air navigation services charges of the Sultanate of Oman will be billed and collected by the International Air Transport Association (IATA) on behalf of the Civil Aviation Authority (CAA) of the Ministry of Transport and Communications at the following address:

Postal Address: International Air Transport
Association
Route de l'Aeroport 33
P.O. Box 672
1215 Geneva 15 - Airport
Switzerland
AFS Address: LSGGIHIH
Telex Number: 415 586
FAX: +41 (22) 799 2678

SITA Text: GVALDXH

1.4 Exemptions

The following aircraft will be exempt from air navigation services charges:

a) Flights operated according to VFR.

b) State aircraft, on a reciprocal basis.

c) Military aircraft operated by the Arab Gulf Cooperation Council States.

d) United Nations or Arab League aircraft.

e) Aircraft engaged on SAR operations, when providing a free service.

ENR 1 GENERAL RULES AND PROCEDURES

ENR 1.1 GENERAL RULES

1. GENERAL

The rules and procedures applicable to air traffic in Oman generally conform with Annexes 2 and 11 to the Convention on International Civil Aviation (Chicago Convention) and those portions, applicable to aircraft, of the Procedures for Air Navigation Services - Air Traffic Management (PANS-ATM, Doc 4444) and the Regional Supplementary Procedures (Doc 7030) in force for the MID part of the MID/ASIA Region.

2. AIR TRAFFIC CONTROL CLEARANCE

An air traffic clearance constitutes authorisation for an aircraft to proceed under conditions specified by an air traffic control unit to a clearance limit under specified conditions. Further clearance is required upon reaching the limit in the clearance.

Clearances are issued solely for expediting and separating air traffic and are based on known traffic conditions which affect safety in aircraft operation. Such traffic conditions include not only aircraft in the air and on the manoeuvring area over which control is being exercised, but also any vehicular traffic or other obstructions not permanently installed on the manoeuvring area in use.

If an air traffic control clearance is not suitable to the pilot-in-command of an aircraft, the flight crew may request and, if practicable, obtain an amended clearance.

ATC clearances do not constitute authority to violate any applicable regulations for promoting the safety of flight operations or for any other purpose; neither do clearances relieve a pilot-in-command of any responsibility whatsoever in connection with a possible violation of applicable rules and regulations.

3. ADHERENCE TO CLEARANCE FOR IMMEDIATE TAKE-OFF

All operators are reminded that when ATC clears an aircraft for IMMEDIATE TAKE-OFF, the aircraft is to enter the runway and commence its take-off roll without stopping. If unable to comply with this instruction, ATC shall be notified before the aircraft enters the runway.

4. AIR TRAFFIC CONTROL INSTRUCTIONS

Air traffic control instructions are directives issued by air traffic control for the purpose of requiring a pilot to take a specific action. A pilot is required to comply with an ATC instruction or shall inform ATC if unable.

5. READBACK OF ATC CLEARANCE AND INSTRUCTIONS

5.1 The flight crew shall read back to the air traffic controller safety-related parts of ATC

clearances and instructions which are transmitted by voice. The following items shall always be read back:

a) ATC route clearances;

b) clearances and instructions to enter, land on, take off from, hold short of, cross, taxi and backtrack on any runway; and

c) runway-in-use, altimeter settings, SSR codes, level instructions, heading and speed instructions and, whether issued by the controller or contained in Automatic Terminal Information Service (ATIS) broadcasts, transition levels.

5.2 Other clearances or instructions, including conditional clearances, shall be read back or acknowledged in a manner to clearly indicate that they have been understood and will be complied with.

6. CLEARANCE TO FLY MAINTAINING OWN SEPARATION

In Class A and C Airspace clearance to fly maintaining own separation in VMC will NOT be granted.

In Class D airspace, when so requested by an aircraft and provided it is agreed by the pilot of the other aircraft, an ATC unit may clear a controlled flight, including departing and arriving flights, operating in visual meteorological conditions during the hours of daylight to fly subject to maintaining own separation to one other aircraft and remaining in visual meteorological conditions provided the clearance shall be for a specified portion of the flight

i) at or below 10000 FT AMSL, during climb or descent; and

ii) the separation is achieved before entering Class A or C Airspace.

The pilot of an IFR flight, on observing that conditions are deteriorating and considering that operation in VMC will become impossible, shall inform ATC before entering instrument meteorological conditions (IMC) and shall proceed in accordance with the alternative instructions given.

Over the high seas flights may encounter State aircraft operating with due regard. Such traffic is not subject to an ATC Clearance and traffic information will be passed to other operating traffic if available.

7. HORIZONTAL SPEED CONTROL INSTRUCTIONS

In order to facilitate a safe and orderly flow of traffic, aircraft may, subject to conditions specified by the appropriate authority, be instructed to adjust speed in a specified manner.

Speed control instructions shall remain in effect unless explicitly cancelled or amended by the controller. The pilot shall inform the ATC unit concerned if at any time they are unable to comply with a speed instruction. Pilots shall adhere to the speed limits associated with airspace classifications and the speed restrictions notified in procedures published in AD 2. Pilots shall also

adhere to the speed (IAS or Mach Number) approved or assigned by ATC and shall request ATC approval before making any changes thereto. If it is essential to make an immediate temporary change in speed (e.g. due to turbulence), ATC shall be notified as soon as possible that such a change has been made.

Pilots of aircraft unable to maintain the last assigned speed during any particular phase of flight (e.g. for aircraft performance reasons) shall inform ATC as soon as possible in order that another speed/alternative clearance can be issued.

At levels at or above FL280, speed adjustments for aircraft in the cruise will be expressed in multiples of 0.01 Mach. At levels below FL280, speed adjustments will be expressed in multiples of 10 KT based on indicated airspeed (IAS).

For aircraft at or above FL280 that have been cleared to descend to levels below FL280, speed adjustments may be based on IAS.

8. VERTICAL SPEED CONTROL INSTRUCTIONS

In order to facilitate a safe and orderly flow of traffic, aircraft may be instructed to adjust rate of climb or rate of descent. Vertical speed control may be applied between two climbing aircraft or two descending aircraft in order to establish or maintain a specific vertical separation minimum.

The flight crew shall inform the ATC unit concerned if unable, at any time, to comply with a specified rate of climb or descent.

9. POSITION REPORTING

Pilots are to make a position report in the following circumstances:

a) after transfer of communication;

b) on reaching the limit of ATS clearance;

c) when instructed by Air Traffic Control;

The position reports shall contain the following elements of information:

a) aircraft identification;

b) position (and time if required by ATC);

c) flight level or altitude, including passing level and cleared level if not maintaining the cleared level;

d) When assigned a speed to maintain, the flight crew shall include this speed in their position reports. The assigned speed shall also be included in the initial call after a change of air-ground voice communication channel, whether or not a full position report is required.

10. AERODROME FLIGHT INFORMATION SERVICE (AFIS)

Aerodrome Flight Information Service (AFIS) is the term used to describe the provision of information useful for the safe efficient conduct of aerodrome traffic at those aerodromes where the provision of aerodrome control service is not justified. Accordingly, AFIS units have been established at certain aerodromes to provide flight information service and alerting service to aerodrome traffic.

Note: An AFIS unit does not provide an Aerodrome Control Service

It is therefore the responsibility of pilots using the service provided by this unit to maintain proper separation in conformity with the rules of the air. When operating in the vicinity of an aerodrome where AFIS is provided, pilots must, on the basis of the information received from the AFIS unit, combined with their own knowledge and observations, decide on the course of action to be taken to ensure separation from other aircraft, ground vehicles and obstacles.

Aircraft operating within an Aerodrome that provides AFIS are required to maintain two-way radio communications with the AFIS unit on the prescribed frequency.

The AFIS unit will provide information enabling the pilot to select the most suitable runway for use. Such information should include, in addition to the current surface wind direction and speed, the 'preferred runway' and traffic pattern and, on request by the pilot, the length of the runway and/or the distance between an intersection and the end of the runway;

Note: The term 'preferred runway' is used to indicate the most suitable runway at a particular time, taking into account the current surface wind direction and speed and other relevant factors such as the traffic pattern and the runway used by other aircraft, with the intention of establishing and maintaining an orderly flow of aerodrome traffic.

AFIS units will provide the following basic information to aircraft:

a) Meteorological information for aircraft about to take off or land, including SIGMET/AIRMET information;

b) Current surface wind direction and speed, including significant variations, indicating the "preferred runway";

c) The current QNH altimeter setting;

d) The air temperature, when requested, in the case of take off by turbine engine aircraft;

e) The current visibility in the direction of take-off and initial climb, or in the approach and landing area if less than 10 KM, or the RVR (if available);

f) Significant meteorological conditions in the take off and climb out area, or in the approach and landing area;

g) The present weather and the amount and the height of the base of low cloud, in the case of aircraft making an approach in IMC;

h) Information on other known aircraft, vehicles or personnel on or near the manoeuvring area that may constitute a hazard;

i) Information on aerodrome conditions, status of navigation aids, messages, including clearances received from ATS units for relay to aircraft; and

j) Any other information contributing to safety.

AFIS units do not provide clearances to land or take-off however pilots shall confirm with AFISO that runway is clear for Landing & Take-off before commencing the take-off roll or landing.

AFIS units control ground movement by means of AFIS instructions. Pilots shall readback such safety related parts of such instructions and comply with the instructions unless advising the AFIS unit that they are unable.

Entering and Backtracking a runway is done at pilot's discretion, however the pilot should confirm with the AFIS unit if there is any traffic that may affect. Pilots should hold short of all runways until confirming that there is not traffic to affect them entering the runway.

11. FLIGHT INFORMATION SERVICE

Enroute aircraft when flying in Class G airspace and in radio contact with an air traffic services unit will receive flight information (FIS) on other aircraft known to be in their vicinity. When within radar Coverage from Muscat Control or Muscat a radar derived advisory service may be provided to IFR and VFR flights operation outside CAS.

12. TESTING OF EMERGENCY LOCATOR TRANSMITTER (ELT)

12.1 General

The following standard procedures shall be used for testing of Emergency Locator TRANSMITTER (ELT) within the MUSCAT FIR. To preclude unnecessary activation of relevant ATS/SAR services, all aircraft operators are requested to comply.

12.2 ELT Testing

Caution should be exercised to prevent inadvertent actuation of locator beacons in the air or on the ground. Operational testing of beacons should be carried out only in shielded areas under controlled conditions. False signals on the distress frequencies can interfere with the distress transmission as well as decrease the degree of urgency attached to such signals. Aircraft operational testing is authorized as follows:

a) Test should be no longer than 3 audio sweeps;

b) If the antenna is removable, a dummy load should be substituted during test procedures;

b) Tests should be conducted only within the first five minutes of each hour. Emergency tests outside of this time shall be coordinated with the nearest ATC unit. Airborne ELT tests are not authorized.

INTENTIONALLY

LEFT

BLANK

ENR 1.2 VISUAL FLIGHT RULES

1. AIRCRAFT EQUIPMENT

VFR flights are required to carry a functioning mode C SSR transponder when operating in class C or class D airspace.

2. MAXIMUM LEVEL FOR VFR

2.1 VFR Flights not permitted above FL150.

2.2 The highest altitude at which a VFR flight may operate within MUSCAT FIR is 12500 FT (see ENR 1.7)

2.3 State Aircraft intending to operate VFR over the high seas above FL150 in the Muscat FIR are not issued with a clearance for this activity and operate with “Due regard” to other traffic.

3. VFR FLIGHTS AT AERODROMES WITH AIR TRAFFIC SERVICES

3.1 VFR flight to be operated within a CTR or ATZ established at an aerodrome where Air Traffic Services (Aerodrome Control or Aerodrome Flight Information Services) are in operation and in specified portions of a TMA and CTA established around an International Airport are required to:

a) have two-way radio communications;

b) obtain permission from the appropriate ATC unit;

c) report position as required.

4. SPECIAL VFR (SVFR)

4.1 When traffic conditions permit, special VFR flights may be authorized subject to the approval of the unit providing approach control service and the provisions of 4.4.

4.2 Requests for such authorization shall be handled individually.

4.3 Separation shall be effected between all IFR flights and special VFR flights in accordance with the separation minima specified in “PANS-ATM (ICAO DOC 4444) Chapter (5) and (6).

4.4 When the ground visibility is not less than 1500 M, special VFR flights may be authorized to: enter a control zone for the purpose of landing, take off and depart from a control zone, cross a control zone or operate locally within a control zone.

INTENTIONALLY

LEFT

BLANK

ENR 1.3 INSTRUMENT FLIGHT RULES

1. RULES APPLICABLE TO ALL IFR FLIGHTS

1.1 Aircraft Equipment

Aircraft shall be equipped with suitable instruments and with navigation equipment appropriate to the route to be flown.

1.2 Minimum Levels

Except when necessary for take-off or landing or when specifically, authorised by the appropriate authority, an IFR flight shall be flown at a level which is not below the minimum flight altitude established by the State whose territory is overflown, or, where no such minimum flight altitude has been established:

a) over high terrain or in mountainous areas, at a level which is at least 2000 FT above the highest obstacle located within 8 KM of the estimated position of the aircraft;

b) elsewhere than as specified in(a), at a level which is at least 1000 FT above the highest obstacle located within 8 KM of the estimated position of the aircraft.

Note: The estimated position of the aircraft will take account of the navigational accuracy which can be achieved on the relevant route segment, having regard to the navigational facilities available on the ground and in the aircraft.

1.3 Climb and Descent

1.3.1 Minimum Rates

Pilots climbing or descending in accordance with an ATC clearance shall inform the controller whenever it is anticipated that the vertical speed during the level change will be less than 500 FT per minute or if the actual speed in the climb or descent is less than 500 FT per minute.

1.3.2 Leaving (Vacating) a Level

When instructed to report leaving a level, pilots shall only advise ATC that they left the assigned level once the aircraft’s altimeter indicates that the aircraft has actually left the assigned level and is maintaining a positive rate of climb or descent.

1.4 Change from IFR flight to VFR flight

1.4.1 An aircraft electing to change the conduct of its flight from compliance with the instrument flight rules to compliance with the visual flight rules shall notify the appropriate air traffic services unit specifically that the IFR flight is cancelled and communicate thereto the changes to be made to its current flight plan.

1.4.2 When an aircraft operating under the instrument flight rules is flown in or encounters visual meteorological conditions, it shall not cancel its IFR flight unless it is anticipated, and intended,

that the flight will be continued for a reasonable period of time in uninterrupted visual meteorological conditions.

2. RULES APPLICABLE TO IFR FLIGHTS WITHIN CONTROLLED AIRSPACE

2.1 IFR flights shall comply with the provisions of 3.6 of ICAO Annex 2 to the Convention on International Civil Aviation when operated in controlled airspace.

2.2 Except whenever otherwise indicated in air traffic control clearances or specified in the Aeronautical Information Publication (AIP), an IFR flight operating in cruising flight in controlled airspace shall be flown at a cruising level, or, if authorized to employ cruise climb techniques, between two levels or above a level, selected from:

a) the table of cruising levels in Appendix 3 of ICAO Annex 2; or

b) a modified table of cruising levels, when so prescribed in accordance with Appendix 3 of ICAO Annex 2 for flight above FL410.

2.3 All IFR flights are required to carry a functioning Mode C SSR transponder when operating in class A, C or class D airspace.

2.4 Non-functioning SSR transponder equipment must be reported to ATC immediately. ATC radar procedures are based on the carriage of this equipment and may require certain restrictions in the case of non-functioning equipment.

2.5 An aircraft, intending to depart from an aerodrome or landing site without an ATS unit which will subsequently require an IFR clearance but has been unable to obtain the clearance shall remain outside of controlled airspace until receiving such clearance, except where remaining outside of controlled airspace would require the aircraft to remain below the minimum level described in 1.2, in such cases the aircraft may climb to the minimum level applicable for the safe conduct of the flight.

2.6 Flights operating at FL280 or above

Flights operating at FL280 or above within Muscat UTA and in controlled airspace and airways outside the UTA within the Muscat FIR shall be operated in accordance with RNAV1/RNAV5 navigation requirements.

2.7 SID and STAR

The flight crew shall comply with published SID and STAR speed restrictions unless the restrictions are explicitly cancelled or amended by the controller.

2.8 Instrument Approach

The approach control unit shall specify the instrument approach procedure to be used by arriving aircraft. A pilot may request an alternative procedure and, if circumstances permit, should be cleared accordingly.

2.9 Visual Approach

2.9.1 An IFR flight may be cleared to execute a visual approach provided the pilot can maintain visual reference to the terrain and:

a) the reported ceiling is at or above the level of the beginning of the initial approach segment for the aircraft so cleared; or

b) the pilot reports at the level of the beginning of the initial approach segment or at any time during the instrument approach procedure that the meteorological conditions are such that with reasonable assurance a visual approach and landing can be completed.

2.9.2 Visual approaches by night will not be authorized unless the pilots' reports show that they have and can maintain the aerodrome in sight.

2.9.3 Pilots are responsible for their own terrain clearance when executing a visual approach and should ensure that the flight remains within controlled airspace while manoeuvring for the visual approach.

Note: ATC may limit the descent of any flight that meets the requirements for a visual approach by using the phrase:

• MAINTAIN (level) [TO (significant point)];

• MAINTAIN (level) UNTIL PASSING (significant point);

• CROSS (significant point) AT (or ABOVE, or BELOW) (level);

• NOT BELOW (feet) Until established [Position].

2.9.4 ATC will provide separation between an aircraft cleared for a visual approach and all other aircraft unless reduced separation minima in the vicinity of aerodromes is being applied according to DOC 4444 Chapter 6, 6.1 applies.

3. RULES APPLICABLE TO IFR FLIGHTS OUTSIDE CONTROLLED AIRSPACE

3.1 Cruising Levels

An IFR flight operating in level cruising flight outside of controlled airspace shall be flown at a cruising level appropriate to its track as specified in:

a) the table of cruising levels in Appendix 3 of ICAO Annex 2, except when otherwise specified by the ATS Unit for flight at or below 3000 FT above mean sea level; or

b) a modified table of cruising levels, when so prescribed in accordance with Appendix 3 of ICAO Annex 2 for flight above FL410.

3.2 Communications

An IFR flight operating outside controlled airspace but within or into areas, or along routes, designated in the AIP, shall maintain a listening watch on the appropriate radio frequency and

establish two-way communication, as necessary, with the air traffic services unit providing flight information service.

3.3 Position Reports

An IFR flight operating outside controlled airspace shall report position as specified in 3.6.3 of ICAO Annex 2 for controlled flights and is required to:

a) submit a flight plan, and

b) maintain a listening watch on the appropriate radio frequency and establish two-way communication, as necessary, with the air traffic services unit providing flight information service.

ENR 1.4 ATS AIRSPACE CLASSIFICATION AND DESCRIPTION

1. GENERAL

ATS airspaces are classified and designated in accordance with the following:

1.1 Class A

IFR flights are only permitted, all flights are subject to air traffic control service and are separated from each other.

1.2 Class B (not used in the Muscat FIR)

IFR and VFR flights are permitted, all flights are subject to air traffic control service and are separated from each other.

1.3 Class C

IFR and VFR flights are permitted, all flights are subject to air traffic control service and IFR flights are separated from other IFR flights and from VFR flights. VFR flights are separated from IFR flights and receive traffic information in respect of other VFR flights.

1.4 Class D

IFR and VFR flights are permitted and all flights are subject to air traffic control service, IFR flights are separated from other IFR flights and receive traffic information in respect of VFR flights, VFR flights receive traffic information in respect of all other flights.

1.5 Class E (not used in the Muscat FIR)

IFR and VFR flights are permitted, IFR flights are subject to air traffic control service and are separated from other IFR flights. All flights receive traffic information as far as practicable.

1.6 Class F (not used in the Muscat FIR)

IFR and VFR flights are permitted, all participating IFR flights receive an air traffic advisory service and all flights receive flight information service if requested.

1.7 Class G

IFR and VFR flights are permitted and receive flight information service if requested.

2. REQUIREMENTS FOR FLIGHTS

The requirements for flights within each class of airspace are as shown in the table on pages ENR 1.4-2 and ENR 1.4-3.

Class	Type of Flight	Separation Provided	Service Provided	VMC Visibility and Distance from Cloud Minima	Speed Limitation	Radio Communication Requirement	ATC Clearance
A	IFR only	All aircraft	Air traffic control service	Not applicable	Not applicable	Continuous two-way	Yes
B(3)	IFR	All aircraft	Air traffic control service	Not applicable	Not applicable	Continuous two-way	Yes
	VFR	All aircraft	Air traffic control service	8 KM at and above 3050 M (10000 FT) AMSL 5 KM below 3050 M (10000 FT) AMSL Clear of clouds	Not applicable	Continuous two-way	Yes
C	IFR	IFR from IFR IFR from VFR	Air traffic control service	Not applicable	250 KT IAS below 3050 M (10000 FT) AMSL, unless advised by ATC.	Continuous two-way	Yes
	VFR	VFR from IFR	1) Air traffic control service for separation from IFR; 2) VFR/VFR traffic information (and traffic avoidance advice on request)	8 KM at and above 3050 M (10000 FT) AMSL 5 KM below 3050 M (10000 FT) AMSL 1500 M horizontal; 300 M vertical distance from cloud	250 KT IAS below 3050 M (10000 FT) AMSL	Continuous two-way	Yes
D	IFR	IFR from IFR	Air traffic control service including traffic information about VFR flights (and traffic avoidance advice on request)	Not applicable	250 KT IAS below 3050 M (10000 FT) AMSL	Continuous two-way	Yes
	VFR	Nil	Traffic	8 KM at and	250 KT IAS	Continuous	Yes

Class	Type of Flight	Separation Provided	Service Provided	VMC Visibility and Distance from Cloud Minima	Speed Limitation	Radio Communication Requirement	ATC Clearance
			information between VFR and IFR flights (and traffic avoidance advice on request)	above 3050 M (10000 FT) AMSL 5 KM below 3050 M (10000 FT) AMSL 1500 M horizontal; 300 M vertical \ distance from cloud	below 3050 M (10000 FT) AMSL	two-way	
E(3)	IFR	IFR from IFR	Air traffic control service and traffic information about VFR flights as far as practical	Not applicable	250 KT IAS below 3050 M (10000 FT) AMSL	Continuous two-way	Yes
	VFR	Nil	Traffic information as far as practical	8 KM at and above 3050 M (10000 FT) AMSL 5 KM below 3050 M (10000 FT) AMSL 1500 M horizontal; 300 M vertical distance from cloud	250 KT IAS below 3050 M (10000 FT) AMSL	No	No
F(3)	IFR	IFR from IFR as far as practical	Air traffic advisory service; flight information service, radar advisory service.	Not applicable	250 KT IAS below 3050 M (10000 FT) AMSL	Continuous two-way	No
	VFR	Nil	Flight information service, radar advisory service.	8 KM at and above 3050 M (10000 FT) AMSL 5 KM below 3050 M	250 KT IAS below 3050 M (10000 FT) AMSL	No	No

Class	Type of Flight	Separation Provided	Service Provided	VMC Visibility and Distance from Cloud Minima	Speed Limitation	Radio Communication Requirement	ATC Clearance
				(10000 FT) AMSL 1500 M horizontal; 300 M vertical distance from cloud. At and below 900 M AMSL or 300 M above terrain whichever is higher - 5 KM, clear of cloud and in sight of ground or water			
G	IFR	Nil	Flight information service	Not applicable	250 KT IAS below 3050 M (10000 FT) AMSL	Continuous two-way	No
	VFR	Nil	Flight information service	8 KM at and above 3050 M (10000 FT) AMSL 5 KM below 3050 M (10000 FT) AMSL 1500 M horizontal; 300 M vertical distance from cloud. At and below 900 M AMSL or 300 M above terrain whichever is higher - 5 KM (1), clear of cloud and in sight of ground or water	250 KT IAS below 3050 M (10000 FT) AMSL(2)	No (Except continuous two-way required when operating in Class G at an aerodrome with ATS)	No

(1) When so prescribed by the appropriate ATS authority:

(a) Lower flight visibilities to 1500 M may be permitted for flights operating:

1) at speeds that will give adequate opportunity to observe other traffic or any obstacles in time to avoid collision; or

2) in circumstances in which the probability of encounters with other traffic would normally be low, e.g., in areas of low traffic volume and for aerial work at low levels;

b) Helicopters may be permitted to operate in less than 1500 M flight visibility, if maneuvered at a speed that will give adequate opportunity to observe other traffic or any obstacles in time to avoid collision.

(2) Military operations are exempted from prescribed IAS restrictions below 10000 FT, provided that all the time a flight visibility of at least 8 KM is maintained.

(3) Classes of airspace B, E and F are not used in the Muscat FIR.

INTENTIONALLY

BLANK

ENR 1.5 HOLDING, APPROACH AND DEPARTURE PROCEDURES

1. GENERAL

1.1 The holding, approach and departure procedures in use are based on those contained in the latest edition of ICAO Doc 8168 — Procedures for Air Navigation Services — Aircraft Operations (PANS-OPS).

1.2 The holding and approach procedures in use have been based on the values and factors contained in Parts III and IV of Vol. I of the PANS-OPS. The holding patterns shall be entered and flown as indicated on the relevant chart.

1.3 Minimum Holding Altitudes (MHA), maximum holding levels and holding speed restrictions are indicated on the relevant chart. Aircraft wishing to hold at higher levels or speeds require clearance to do so from the relevant ATC unit.

2. ARRIVING FLIGHTS

2.1 IFR flights entering a TMA or CTR for landing will be cleared to a specified holding point at a specified level by the ACC. This clearance will be adhered to until further instructions are received. At the specified time, position or level, control of flights shall be transferred to the relevant APP unit that will issue further instructions. If the clearance limit is reached before further instructions have been received, the published holding procedure will be carried out, at the last assigned level, until clearance to commence an approach is issued. Normally, an EAT will be given with the initial clearance if holding is anticipated. If no holding procedure is published, the standard en route holding procedure will be flown, inbound on the published airway centerline, right turns, timing and level as appropriate.

2.2 Due to the limited airspace available, it is essential that approaches to and flying of holding patterns are conducted as precisely as possible, according to published procedures. If, for any reason, pilots are unable to comply with this requirement, they will notify ATC immediately and request an alternative clearance, to ensure that airspace protected by the holding area is not infringed.

2.3 Instrument approach procedures for MUSCAT / Muscat International Airport and for Salalah are depicted in section AD 2.OOMS and AD 2.OOSA respectively.

3. DEPARTING FLIGHTS

3.1 IFR flights departing from controlled aerodromes will receive initial ATC clearance from the local aerodrome control tower together with any additional instructions necessary due to local traffic conditions and/or procedures in force. The clearance limit will normally be the aerodrome of destination. For flights leaving CAS, this will not be taken to imply the provision of a control service beyond the relevant CAS boundary; neither does it relieve the aircraft commander of the responsibility for obtaining the necessary clearance prior to reentering that or any other CAS.

3.2 IFR flights departing uncontrolled ADs will either:

3.2.1 Obtain ATC Clearance from Muscat Control via the ATSU at the departure AD when one is established; or

3.2.2 Obtain traffic information from FIC or Muscat Control prior to entering CAS and if the flight is planned to enter CAS, obtain the necessary clearance, prior to entry from the ACC or;

3.2.3 If Clearance has not been received from Muscat Control shall:

a) remain outside CAS until clearance is obtained;

b) comply with VFR; or

c) where VFR cannot be maintained, comply with IFR and climb to the lowest usable IFR cruising level applicable for the area or route;

d) operate the pressure-altitude reporting SSR transponder on code 2000;

e) Continue to attempt to contact Muscat Control for further clearance.

ENR 1.6 ATS SURVEILLANCE SERVICES AND PROCEDURES

1. GENERAL

1.1 Radar units are operated as an integral part of the parent ATS unit and provide radar service to aircraft to the maximum practicable extent, to meet the operational requirements. Factors, such as radar coverage, controller workload and equipment capabilities, affect these services, and the radar controller will determine whether he can provide, or continue to provide, radar services in any specific case.

1.2 Pilots will be advised on commencement and termination of radar services.

2. RADAR COVERAGE

Total radar coverage within the Muscat FIR.

Oman Primary Radars		
Location	**Type**	**Max Range (NM)**
Muscat	PSR	100
Salalah	PSR	100

Oman Secondary Radars		
Location	**Type**	**Max Range (NM)**
Muscat	MSSR	250
Wudam		
Ras Al-Had		
Jalaan		
Al-Duqm		
Qairoon Hiriti		
Salalah		

3. APPLICATION OF RADAR CONTROL SERVICE

3.1 Radar identification is achieved to provisions specified by ICAO.
3.2 Radar control services are provided in all controlled airspace. This service may include:

a) radar separation of arriving, departing and en route traffic;

b) radar monitoring of arriving, departing and en route traffic to provide information on any significant deviation from the normal flight path;

c) radar vectoring when required;

d) assistance to aircraft in an emergency;

e) assistance to aircraft crossing controlled airspace;

f) warnings and position information on other aircraft considered constituting a hazard;

g) information to assist in the navigation of aircraft;

h) information on observed weather.

3.3 The minimum horizontal radar separations are:

a) 5 NM en route;

b) 5 NM within Muscat CTR and TMA;

c) 5 NM within Salalah CTR and TMA;

These minimum horizontal radar separation values may be increased:

a) at the controller's discretion;

b) when wake turbulence is known;

c) at the request of the pilot.

3.4 Levels assigned by the radar controller to pilots will provide a minimum terrain clearance according to the phase of flight.

4. SECONDARY SURVEILLANCE RADAR (SSR)

4.1 Operating procedures

4.1.1 Except as provided below, pilots will operate transponders and select modes and codes according to ATC instructions. In particular, when entering the Muscat FIR, pilots who have already received specific instructions from ATC concerning the setting of the transponder, will maintain that setting until otherwise instructed. Mode C will be selected at all times unless otherwise instructed or in exceptional cases as stated below.

4.1.2 Pilots of aircraft operating in or about to enter the Muscat FIR who have not received specific instructions from ATC concerning the setting of the transponder, will operate the transponder on mode A/3 code 2000 and maintain that code setting unless otherwise instructed.

4.1.3 Mode C will be selected at all times unless otherwise instructed.

4.1.4 System of SSR Code Assignment

a) Muscat uses code blocks assigned under the originating region code allocation method.

(ORCAM)

b) Aircraft entering the Muscat FIR shall retain the SSR code previously issued by ATC in an adjacent FIR (except for flights from Mumbai, Karachi and Sanaa FIR).

c) The following Transit SSR codes (Mode A) will be assigned by Muscat ACC for flights entering Muscat from Mumbai, Karachi and Sanaa FIR and flights departing Oman airports intending to leave Muscat FIR: 3500 to 3577, 4000 to 4077, 4700 to 4777.

d) The following Domestic SSR codes (Mode A) will be assigned by Muscat ACC for flights remaining within the Muscat FIR: 1200 to 1277, 4600 to 4677.

4.2 Emergency procedures

4.2.1 If the pilot of an aircraft encountering a state of emergency has previously been directed by ATC to operate the transponder on a specific code, this code setting will be maintained until otherwise advised. In all other emergency circumstances, the transponder will be set as follows:

a) Mode A/3 code 7500 - Unlawful interference.

b) Mode A/3 code 7600 - Radio communication failure.

c) Mode A/3 code 7700 - Other states of emergency.

4.2.2 Notwithstanding the procedure in paragraph 4.1.1 above, a pilot may select mode A/3 code 7500, 7600 or 7700, as appropriate, whenever the nature of emergency is such that this appears to him to be the most suitable course of action.

5. RADAR AND RADIO FAILURE PROCEDURES

5.1 Radar Failure

In case of radar failure or loss of radar identification, instructions will be issued to restore non-radar standard separation and the pilot will be instructed to communicate with the parent ATS unit.

5.2 Radio Failure

5.2.1 Aircraft not equipped with transponder

The radar controller will establish whether the aircraft radio receiver is working by instructing the pilot to perform a turn, maintain the new heading for a period of time (specified) and then resume normal navigation. The magnitude of the turn will be such as to enable the identification to be achieved should the aircraft not previously have been identified. The direction of the turn will be determined by the operational requirements.

5.2.2 Aircraft equipped with transponder

The radar controller will establish whether the aircraft radio receiver is working by instructing the pilot to perform one or more of the following:

a) change transponder mode,

b) change transponder code,

c) operate the SPI feature.

The method used will be such as to enable the identification to be achieved should the aircraft not previously have been identified.

5.2.3 Action by radar control

a) If subsequent movement of the radar echo or subsequent radar responses indicate that the aircraft radio receiver is working, the radar controller will assume or resume radar control, as the case may be, and continue to pass instructions as for a normal radar service.

b) If subsequent movements of the radar echo or subsequent radar responses indicate that the aircraft radio receiver is not working, the radar controller will take action, according to the circumstances prevailing, as detailed in paragraph 5.2.3.c) and d) below as appropriate.

c) If, prior to the communication failure, the radio failure aircraft was identified, the radar controller will ensure that all known traffic is provided with a minimum of 5 NM horizontal radar separation from the radio failure aircraft, performing identification as necessary, until such time as the radio failure leaves radar coverage or lands.

d) If, prior to the communication failure, the radio failure aircraft was not identified or its position is not known, the radar controller will continue to provide a radar service to the identified aircraft only, provided that primary radar coverage is sufficient for him to ensure a minimum of 5 NM horizontal radar separation from all unknown traffic, until such time as the radio failure aircraft is known to have left the area or landed.

5.2.4 Action by aircraft

a) Aircraft able to receive transmissions from radar control will comply with such instructions as are issued, acknowledging as indicated by the radar controller, as detailed in paragraph 5.2.3 a) above.

b) Aircraft not able to receive transmissions will comply with the ICAO radio communication failure procedures as prescribed in Annex 2, 3.6.5.2 and PANS-ATM Chapter 15.2 and those detailed in: AD 2.OOMS section 22 for Muscat and AD 2.OOSA section 22 for Salalah.

c) It is essential that the procedures as detailed above, as appropriate, are rigidly adhered to as the action by radar control, detailed above, are based upon aircraft compliance therewith; failure to comply may result in loss of separation.

5.2.5 Action in the event of air-ground communication failure

As soon as it is known that two-way communications has failed, ATC shall maintain separation between the aircraft having the communication failure and other aircraft based on the assumption that the aircraft will operate in accordance with 5.2.6 and 5.2.7.

Note: The following expands upon the requirements contained in Annex 2, 3.6.5.2 and the PANSATM, 8.8.3 and 15.2 and specifies additional details regarding air-ground communications failure.

5.2.6 Visual meteorological condition (VMC)

Except as provided in 5.2.7, a controlled flight experiencing communications failure in VMC shall:

a) set transponder to code 7600;

b) continue to fly in VMC;

c) land at the nearest suitable aerodrome; and

d) report its arrival time by the most expeditious means to the appropriate air traffic control unit.

5.2.7 Instrument meteorological conditions (IMC)

A controlled IFR flight experiencing communications failure in IMC or in VMC when it does not appear feasible to continue in VMC within the Muscat FIR shall:

a) set transponder to code 7600; and

b) maintain the last assigned speed and level or the minimum flight altitude, if the minimum flight altitude is higher than the last assigned level, for a period of 7 minutes.
The period 7 minutes commences:

1) if operating on a route without compulsory reporting points or has been instructed to omit position

report:

a) at the time the last assigned level or minimum flight altitude is reached, or

b) at the time the aircraft sets transponder to code 7600,

whichever is later; or

2) if operating on a route with compulsory reporting points and no instructions to omit position reports has been received:

a) at the time the last assigned level or minimum flight altitude is reached, or

b) at the previously reported pilot estimate for the compulsory reporting point, or

c) at the time the aircraft fails to report its position over a compulsory reporting point, whichever is later, or

c) thereafter, adjust level and speed in accordance with the filed flight plan;

Note: With regard to changes to levels and speed, the filed flight plan, which is the flight plan as filed with an ATS unit by the pilot or designated representative without any subsequent changes, will be used.

d) if being radar vectored or proceeding offset according to RNAV without a specified limit, proceed in the most direct manner possible to rejoin the current flight plan route no later than the next significant point, taking into consideration the applicable minimum flight altitude;

Note: With regard to the route to be flown or the time to begin descent to the arrival aerodrome, the current flight plan, which is the flight plan, including changes, if any, brought by subsequent clearances, will be used.

e) proceed according to the current flight plan to the appropriate designated navigation aid serving the destination aerodrome and, when required to ensure compliance with 5.2.7 f), hold over this aid until commencement of decent;

f) commence descent from the navigation aid specified in 5.2.7 e) at, or as close as possible to, the expected approach time last received and acknowledged or, if no expected approach time has been received and acknowledged, at, or as close as possible to, the estimated time of arrival resulting from the current flight plan;

g) complete a normal instrument approach procedure as specified for the designated navigation aid; and

h) land, if possible, within thirty minutes after the estimated time of arrival specified in 5.2.7 f) or the last acknowledged expected approach time, which ever is later.

Note: Pilots are reminded that the aircraft may not be in an area of secondary surveillance radar coverage.

ENR 1.7 ALTIMETER SETTING PROCEDURES

1. INTRODUCTION

1.1. The altimeter setting procedures in use generally conform to those contained in PANS-OPS ICAO Doc 8168-OPS/611 Volume III, section 2, and only differences are stated.

1.2. Transition Altitude (TA) is given on the instrument approach charts.

1.3. QNH reports and temperature information for use in determining adequate terrain clearance are provided in the Operational Flight Information Service (OFIS) broadcasts and are available on request from the Air Traffic Services Units (ATSUs).

1.4. QNH values are given in Hectopascal (hPa) and rounded down to the nearest whole hPa.

2. BASIC ALTIMETER SETTING PROCEDURES

2.1 General

2.1.1 System of flight levels

2.1.1.1. FL zero is located at the atmospheric pressure level of 1013.25 hPa (29.92 IN inches Hg). Consecutive FLs are separated by a pressure interval corresponding to 500 FT in the Standard Atmosphere.

2.1.1.2. Flight levels shall be numbered according to Table 4.7.

2.1.2. Transition Altitude (TA)

2.1.2.1. Muscat FIR Transition Altitude (TA) is common and specified as 13000 FT.

2.1.2.2. Transition Altitude (TA) is published in Aeronautical Information Publications and shown on the instrument approach charts.

2.1.3 Transition level (TL)

2.1.3.1. Muscat FIR Transition level (TL) is common and specified as FL 150.

2.1.4 References to vertical position

2.1.4.1. The Vertical positioning of aircraft operating at or below the TA shall be expressed in terms of Altitude (ALT).

2.1.4.2. The Vertical positioning of aircraft operating at or above the TL is expressed in terms of Flight Levels (FL).

2.1.4.3. Vertical positioning of aircraft while passing through the Transition Layer, shall be expressed in terms of:

a) altitude when descending and,

b) flight levels when climbing.

2.1.5 The terminology TA/TL applies during:

a) climb;

b) en-route flight; and

c) approach and landing

Note.— This does not preclude a pilot using a QFE setting for terrain clearance purposes during the final approach to the runway.

2.2 Take-off and climb.

2.2.1 A QNH altimeter setting is made available to aircraft in taxi clearance prior to take-off.

2.2.2 During climb, all references in A/G communication to vertical position shall be in terms of:

a) FL when at or above TA; or

b) ALTs when at or below TA.

2.2.3 The altimeter subscale setting shall be changed from QNH to 1013.25 (ISA) on leaving or passing the TA.

2.3 Enroute

2.3.1 Vertical separation enroute is assessed in terms of:

a) ALT, when at and below the TA; and

b) FL, when at and above the TL.

Note: Transition Level for Muscat FIR is fixed at FL150. Transition Altitude for the Muscat FIR is fixed at 13000 FT. Highest usable cruising altitude 13000 FT. Lowest usable cruising level FL150. ACFT at or below the TA arriving at or departing from controlled airfields are to change from regional to airfield QNH or vice versa at 50 NM or on entering or leaving controlled airspace.

2.3.2 Terrain clearance

2.3.2.1 Terrain clearance shall be assessed on the basis of the latest Regional QNH obtainable from ATC.

2.4 Approach and landing

2.4.1 A QNH altimeter setting shall be made available to aircraft in approach clearance and in clearance to enter the traffic circuit.

2.4.2 A QFE altimeter settings are clearly identified by ATS for AD ELEV and THR ELEV if 7 FT or more below AD ELEV and are available in approach and landing clearances on request.

2.4.3 Vertical positioning of aircraft during approach is controlled by reference to:

a) FL, until reaching the TL; and

b) ALT, when below the TL.

Note: This does not preclude a pilot using either:

a) QNH setting from top of descent when cleared for uninterrupted descent to a level below TL; or

b) QFE setting for terrain clearance purposes during final approach to the runway.

2.5 Missed approach

2.5.1 The relevant parts parts of 2.1.4, 2.2, “Take-off and climb” and 2.4, “Approach and landing” shall be applied in the event of a missed approach.

3. ALTIMETER SETTING REGIONS (ASR).

3.1. For terrain clearance purposes, a Regional QNH, i.e., the lowest forecast MSL pressure value, valid for a period of 3 hours and amended as necessary by actual reports, is available from ATSUs.

3.2. The Muscat FIR is divided into three altimeter setting regions. As depicted on ENR 1.7-3 they are designated as

a) ASR Muscat between 25N and 20N,

b) ASR Dhofar South of 20N and

c) ASR Mussandam North of 25N

4. PROCEDURES APPLICABLE TO OPERATORS (INCLUDING PILOTS).

4.1 Flight planning

4.1.1 The levels at which a flight is to be conducted shall be specified in a flight plan in terms of :

a) Flight Levels (FL) if the flight is to be conducted at or above the Transition Level (TL) (or the lowest usable flight level, if applicable); and

b) Altitudes (ALTs) if the flight is to be conducted in the vicinity of an aerodrome and at or below the Transition Altitude (TA).

4.1.2 The altitudes or flight levels selected for flight should:

a) ensure adequate terrain clearance at all points along of the entire route; and

b) be compatible with the table of cruising levels as shown on page ENR 1.7-1. satisfy ATC requirements; and

c) be compatible with the table of cruising levels as shown in Table **4.2**

4.2 Table of cruising levels

4.2.1 The cruising levels to be observed when so required are as follows:

a) In areas where, on the basis regional air navigation agreement and in accordance with conditions specified therein, a vertical separation minimum (VSM) of 300 m (1000 ft) is applied between FL290 and FL 410 inclusive.

Table of Cruising Levels

ENR 1.8 REGIONAL SUPPLEMENTARY PROCEDURES

These supplementary procedures are taken from ICAO Doc 7030 – Supplementary Procedures – and relating to the MID-ASIA Region are given in their entirety. For differences applied in Oman, see GEN 1.7.

These procedures are supplementary to the provisions contained in ICAO Annex 2, Annex 6 (Part II), Annex 11, PANS-ATM (Doc 4444) and PANS-OPS (Doc 8168).

1. FLIGHT RULES

1.1 Visual Flight Rules (VFR)

(Relating to Annex 2 - 4.7 and 4.8)

1.1.1 Special Application

Oman requires VFR flights that operate at any aerodrome with Air Traffic Services shall have two-way radio communications (See ENR 1.2.3)

1.2 Instrument Flight Rules (IFR)

(Relating to Annex 2.2 and Chapter 5)

Note: Annex 2, 2.2 permits a choice for a flight to comply with either the instrument flight rules or the visual flight rules when operating in visual meteorological conditions subject to certain limitations in Chapter 4 of the Annex. The following indicates certain further restrictions to that choice.

1.2.1 Special Application of Instrument Flight Rules

1.2.1.1 Flights shall be conducted in accordance with the Instrument Flight Rules (even when not operating in instrument meteorological conditions) when operated:

1. more than 100 NM seaward from the shoreline within controlled airspace; or

2. above flight level 150.

2. FLIGHT PLANS

2.1 Content - General

(Relating to Annex 2 – Chapter 3; P-ATM – Chapter 4 and Appendix 2)

2.1.1 Reduced Vertical Separation Minimum (RVSM)- Approved Aircraft

2.1.1.1 The aircraft registration shall be inserted in Item 18 of the ICAO flight plan form.

2.1.1.2 Operators of formation flights of State aircraft shall not insert the letter W in Item 10 of the

ICAO flight plan form, regardless of the RVSM approval status of the aircraft concerned. Operators of formation flights of State aircraft intending to operate within the RVSM airspace specified in 4.1 b) 2 shall include STS/NONRVSM in Item 18 of the ICAO flight plan form.

2.1.2 Non-RVSM - Approved Aircraft

2.1.2.1 Civil operators of non-RVSM-approved aircraft shall flight plan to operate outside the RVSM airspace specified in 4.1.

2.1.3 Mach Number

2.1.3.1 For turbo-jet aircraft intending to operate within airspace and on air routes to which longitudinal separation minima utilizing Mach number technique will be applied, the planned true Mach number shall be specified in Item 15 of the flight plan.

3. COMMUNICATIONS

3.1 Air-Ground Communications and In-Flight Reporting

3.1.1 Continuous listening watch in uncontrolled airspace (Relating to Annex 2 – Chapters 3 and 5; P-ATM – Chapter 4)

3.1.1.1 All VFR flights, and IFR flights outside controlled airspace, shall maintain a listening watch on the frequency where flight information service is provided and report position unless otherwise authorized by the State overflown.

4. REDUCED VERTICAL SEPARATION MINIMUM (RVSM)

4.1 Area of Applicability

RVSM shall be applicable in that volume of airspace between FL290 and FL410 inclusive in the Muscat FIR/ UIR, as described in ENR 2.1.

Within this airspace, the vertical separation minimum shall be:

a) 1000 FT between RVSM approved aircraft;

b) 2000 FT between:

1) non-RVSM approved State aircraft and any other aircraft operating within the RVSM airspace;

2) formation flights of State aircraft and any other aircraft operating within the RVSM airspace;

3) an aircraft experiencing a communication failure in flight and any other aircraft, when both aircraft are operating within RVSM airspace.

5. PHRASEOLOGY

(P-ATM – Chapter 12)

5.1 RNAV

5.1.1 The phrase “UNABLE RNAV DUE EQUIPMENT” shall be included by the pilot immediately following the aircraft call sign whenever initial contact on an ATC frequency is established by an aircraft experiencing a failure or degradation of the RNAV system.

5.1.2 The phrase “NEGATIVE RNAV” shall be included by the pilot immediately following the aircraft call sign whenever initial contact on an ATC frequency is established by a State aircraft not equipped with RNAV.

6. INTERNATIONAL GENERAL AVIATION (IGA)

(Relating to Annex 6, Part II – Chapter 6)

6.1 General aviation aircraft operating over designated areas, land or sea, where search and rescue operations would be difficult, should:

a) carry appropriate survival equipment; and

b) follow the routes or specified procedures if not equipped with two-way radio, except that under special circumstances, the appropriate authority may grant specific exemptions from this requirement.

7. WEATHER DEVIATION PROCEDURES IN THE MUSCAT FIR

7.1 General

Note: The following procedures are intended for deviations around adverse meteorological conditions.

7.1.1 When weather deviation is required, the pilot should initiate communications with ATC via voice. A rapid response may be obtained by stating “WEATHER DEVIATION REQUIRED” to indicate that priority is desired on the frequency and for ATC response.

7.1.2 When necessary, the pilot should initiate the communications using the urgency call “PAN PAN” (preferably spoken three times).

7.1.3 The pilot shall inform ATC when weather deviation is no longer required, or when a weather deviation has been completed and the aircraft has returned to its cleared route.

7.2 Actions to be taken when controller-pilot communications are established

7.2.1 The pilot should notify ATC and request clearance to deviate from track or ATS route, advising, when possible, the extent of the deviation requested. The flight crew will use whatever means are appropriate to communicate during a weather deviation.

Note: Pilots are advised to contact ATC as soon as possible with requests for clearance in order to provide adequate time for the request to be assessed and acted upon.

7.2.2 After communicating with ATC, the pilot should take the following actions:

a) comply with the ATC clearance issued; or

b) advise ATC of intentions and execute the procedures detailed in 7.3

7.3 Actions to be taken if a revised ATC Clearance cannot be obtained

7.3.1 If the aircraft is required to deviate from track or ATS route to avoid adverse meteorological conditions and prior clearance cannot be obtained, an ATC clearance shall be obtained at the earliest possible time. Until an ATC clearance is received, the pilot shall take the following actions:

a) if possible, deviate away from an organized track or ATS route system;

b) establish communications with and alert nearby aircraft by broadcasting, at suitable intervals: aircraft identification, flight level, position (including ATS route designator or the track code) and intentions, on the frequency in use and on 121.5 MHz (or, as a backup, on the inter-pilot air-to-air frequency 123.45 MHz);

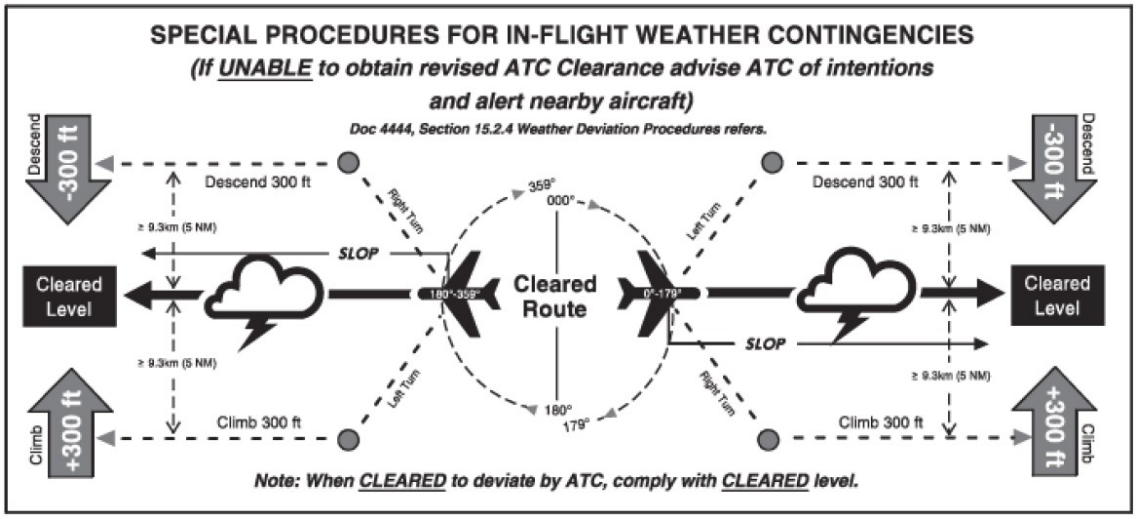
c) watch for conflicting traffic both visually and by reference to ACAS (if equipped);

d) turn on all aircraft exterior lights (commensurate with appropriate operating limitations);

e) for deviations of less than 5.0 NM from the originally cleared track or ATS route, remain at a level assigned by ATC;

f) for deviations greater than, or equal to 5.0 NM from the originally cleared track or ATS route, when the aircraft is approximately 5.0 NM from track, initiate a level change in accordance with the following table:

Originally cleared track or ATS route centreline	**Deviations greater than 5NM**	**Level change**
EAST 000-179 MAG	LEFT RIGHT	DESCEND 300 FT CLIMB 300 FT
WEST 180-359 MAG	LEFT RIGHT	CLIMB 300 FT DESCEND 300 FT



g) if the pilot receives clearance to deviate from cleared track or ATS route for a specified distance and, subsequently, requests, but cannot obtain a clearance to deviate beyond that distance, the pilot should apply an altitude offset in accordance with the table above before deviating beyond the cleared distance;

h) when returning to track or ATS route, be at its assigned flight level when the aircraft is within approximately 5.0 NM of the centreline; and

i) if contact was not established prior to deviating, continue to attempt to contact ATC to obtain a clearance. If contact was established, continue to keep ATC advised of intentions and obtain essential traffic information.

Note: If, as a result of actions taken under the provisions of 2.6, the pilot determines that there is another aircraft at or near the same flight level with which a conflict may occur, then the pilot is expected to adjust the path of the aircraft, as necessary, to avoid conflict.

8. SPECIAL PROCEDURES FOR IN-FLIGHT CONTINGENCIES

8.1 General

The following general procedures apply to both subsonic and supersonic aircraft. Although all possible contingencies cannot be covered, they provide for cases of inability to maintain assigned level due to weather, aircraft performance, pressurization failure and problems associated with high-level supersonic flight. They are applicable primarily when rapid descent and/or turn-back or diversion to an alternate airport are required. The pilot's judgment shall determine the sequence of actions taken, taking into account specific circumstances.

If an aircraft is unable to continue flight in accordance with its ATC clearance, a revised clearance shall, whenever possible, be obtained prior to initiating any action, using a distress or urgency signal as appropriate.

If prior clearance cannot be obtained, an ATC clearance shall be obtained at the earliest possible time and, until a revised clearance is received, the pilot shall:

a) if possible deviate away from an organized track or route system before commencing descent;

b) establish communications with and alert nearby aircraft by broadcasting, at suitable intervals: aircraft identification, flight level, aircraft position (including the ATS route designator or the track code) and intentions, on the frequency in use, as well as on frequency 121.50 MHz (or, as a back-up, the VHF inter-pilot air-to-air frequency 123.450 MHz);

c) watch for conflicting traffic both visually and by reference to ACAS (if equipped);

d) turn on all aircraft exterior lights; (commensurate with appropriate operating limitations);

e) advise the appropriate air traffic control unit as soon as possible of the emergency descent;

f) set the transponder to Code 7700 and select emergency mode on automatic dependent surveillance/ controller-pilot data link communications (ADS/ CPDLC) system, if applicable; and

g) coordinate further intentions with the appropriate ATC unit.

The aircraft shall not descend below the lowest published minimum altitude which will provide a minimum vertical clearance of 300 M (1000 FT) or in designated mountainous terrain 600 M (2000 FT) above all obstacles located in the area specified.

9. ACTION BY THE AIR TRAFFIC CONTROL UNIT

Immediately upon recognizing that an emergency descent is in progress, ATC units shall acknowledge the emergency on radiotelephony (RTF) and take all necessary action to safeguard all aircraft concerned.

In particular, they may, as required by the situation:

a) suggest a heading to be flown, if able, by the aircraft carrying out the emergency descent in order to achieve spacing from other aircraft concerned.

b) state the minimum altitude for the area of operation, only if the level-off altitude stated by the pilot is below such minimum altitude, together with the applicable QNH altimeter setting.

c) as soon as possible, provide separation with conflicting traffic, or issue essential traffic information, as appropriate.

When deemed necessary, air traffic control will broadcast an emergency message, or cause such message to be broadcast, to other aircraft concerned to warn them of the emergency descent.

10. SPECIAL PROCEDURES FOR SUBSONIC AIRCRAFT REQUIRING RAPID DESCENT AND/OR TURN-BACK OR DIVERSION TO AN ALTERNATE AIRPORT DUE TO AIRCRAFT SYSTEM MALFUNCTION OR OTHER CONTINGENCIES

Note: Additional procedures for in-flight contingencies involving a loss of vertical navigation performance required for flights within the RVSM airspace are contained in 11.

10.1 Initial Action

If unable to comply with the provision of 8.1 to obtain a revised ATC clearance, the aircraft should leave its assigned route or track by turning 90 degrees to the right or left whenever this is possible, The direction of the turn should, where possible, be determined by the position of the aircraft relative to any organized route or track system, e.g. whether the aircraft is outside, at the edge of, or within the system. Other factors to consider are the direction of the alternate airport, terrain clearance and the levels allocated to adjacent routes or tracks.

10.2 Subsequent Action (RVSM Airspace)

In RVSM airspace, an aircraft able to maintain its assigned flight level should turn to acquire and maintain in either direction a track laterally separated by 46 KM (25 NM) from its assigned route or track in a multi-track system spaced at 93 KM (50 NM) or otherwise, at a distance which is the mid-point from the adjacent parallel route or track; and

a) if above FL410, climb or descend 300 M (1000 FT); or

b) if below FL410, climb or descend 150 M (500 FT); or

c) if at FL410, climb 300 M (1000 FT) or descend 150 M (500 FT).

An aircraft that is unable to maintain its assigned flight level should:

a) initially minimize its rate of descent to the extent that is operationally feasible;

b) turn while descending to acquire and maintain in either direction a track laterally separated by 46 KM (25 NM) from its assigned route or track in a multitrack system spaced 93 KM (50 NM) or otherwise, at a distance which is the mid-point from the adjacent parallel route or track; and

c) for the subsequent level flight, select a level which differs from those normally used by 300 M (1000 FT) if above FL410, or by 150 M (500 FT) if below FL410.

11. DIVERSION ACROSS THE FLOW OF ADJACENT TRAFFIC

11.1 Before diverting across the flow of adjacent traffic, the aircraft should: climb above FL410 or descend below FL280 using the procedures specified in 10.1 or 10.2. However, if the pilot is unable or unwilling to carry out a major climb or descent, the aircraft should be flown at a level as defined in 10.2 or until a revised ATC clearance is obtained.

11.2 Extended range operations by aeroplanes with two turbine power-units (ETOPS) aircraft.

If these contingency procedures are employed by a twin-engine aircraft as a result of an engine shutdown or failure of an ETOPS critical system, the pilot should advise ATC as soon as practicable of the situation, reminding ATC of the type of aircraft involved, and request expeditious handling.

11.3 Special procedures for in-flight contingencies involving a loss of vertical navigation performance.

a) Degradation of aircraft equipment - pilot reported

1) When informed by the pilot of an RVSM approved aircraft operating in the RVSM airspace that the aircraft's equipment no longer meets the RVSM MASPS, ATC shall consider the aircraft as non-RVSM approved.

2) ATC shall take action immediately to provide a minimum vertical separation of 600 M (2000 FT) or an appropriate horizontal separation from all other aircraft concerned that are operating in the RVSM airspace. An aircraft rendered non-RVSM approved shall normally be cleared out of the RVSM airspace by ATC when it is possible to do so.

3) Pilots shall inform ATC, as soon as practicable, of any restoration of the proper functioning of equipment required to meet the RVSM MASPS.

b) Severe turbulence - not forecast

1) When an aircraft operating in the RVSM airspace encounters severe turbulence due to weather or wake vortex that the pilot believes will impact the aircraft's capability to maintain its cleared flight level, the pilot shall inform ATC.

11.4 Weather deviation procedures for oceanic-controlled airspace

a) General

1) The following procedures are intended to provide guidance. All possible circumstances cannot be covered. The pilot's judgment shall ultimately determine the sequence of actions taken, and ATC shall render all possible assistance.

2) If the aircraft is required to deviate from track to avoid weather and prior clearance cannot be obtained, an ATC clearance shall be obtained at the earliest possible time. Until an ATC clearance is received, the aircraft shall follow the procedures detailed in 11.4 d) below.

3) The pilot shall advise ATC when weather deviation is no longer required, or when a weather deviation has been completed and the aircraft has returned to the centre line of its cleared route.

b) Obtaining priority from ATC when weather deviation is required:

1) When the pilot initiates communications with ATC, rapid response may be obtained by stating "WEATHER DEVIATION REQUIRED" to indicate that priority is desired on the frequency and for ATC response.

2) The pilot still retains the option of initiating the communications using the urgency call "PAN PAN" (preferably spoken three times) to alert all listening parties to a special handling condition which will receive ATC priority for issuance of a clearance or assistance.

c) Actions to be taken when controller-pilot communications are established.

1) Pilot notifies ATC and requests clearance to deviate from track. advising, when possible, the extent of the deviation expected.

2) ATC takes one of the following actions:

a) if there is no conflicting traffic in the horizontal dimension, ATC will issue clearance to deviate from track; or

b) if there is conflicting traffic in the horizontal dimension, ATC separates aircraft by establishing vertical separation; or

c) if there is conflicting traffic in the horizontal dimension and ATC is unable to establish appropriate separation, ATC shall:

- advise the pilot of inability to issue clearance for requested deviation; and

- advise pilot of conflicting traffic; and

- request pilot’s intentions.

SAMPLE PHRASEOLOGY

UNABLE (request deviation), TRAFFIC IS (call sign, position, altitude, direction) ADVISE INTENTIONS

3) Pilot will take following actions:

a) advise ATC of intentions by the most expeditious means available; and

b) comply with air traffic control clearance issued; or

c) execute the procedures detailed in 11.4 d) below (ATC will issue essential traffic information to all affected aircraft); and

d) if necessary, establish voice communications with ATC to expedite dialogue on the situation.

d) Actions to be taken if a revised ATC clearance cannot be obtained.

1) The provisions of this section apply to situations where the pilot has the need to exercise the authority of a pilot-in-command under the provisions of Annex 2, 2.3.1

2) If a revised ATC clearance cannot be obtained and deviation from track is required to avoid weather, the pilot shall take the following actions:

a) if possible, deviate away from an organized track or route system;

b) establish communication with and alert nearby aircraft by broadcasting at suitable intervals: aircraft identification, flight level, aircraft position (including the ATS route designator or the track code) and intentions (including the magnitude of the deviation expected) on the frequency in use, as well as on frequency 121.50 MHz (or as a backup the VHF inter-pilot air-to-air frequency 123.450 MHz);

c) watch for conflicting traffic both visually and by reference to ACAS (if equipped);

Note If as a result of action taken under 11.4 d) 2) b) and c) above, the pilot determines that there is another aircraft at or near the same flight level with which a conflict may occur, then the pilot is expected to adjust the path of the aircraft, as necessary, to avoid conflict.

d) turn on aircraft exterior lights (commensurate with appropriate operating limitations);

e) for deviations less than 19 KM (10 NM) aircraft should remain at a level assigned by ATC;

f) for deviations of greater than 19 KM (10 NM), when the aircraft is approximately 19 KM (10 NM) from track, initiate a level change based on the critical in Table below;

g) when returning to track, be at its assigned level, when the aircraft is within approximately 19 KM (10 NM) of centre line; and

h) if contact was not established prior to deviating, continue to attempt to contact ATC to obtain a clearance. If contact was established, continue to keep ATC advised of intentions and obtain essential traffic information.

12. WAKE TURBULENCE PROCEDURES

12.1 The following special procedures are applicable to mitigate wake turbulence encounters in airspace where RVSM is applied.

a) An aircraft that encounters wake turbulence should notify (ATC) and request a revised clearance. However, in situations where a revised clearance is not possible or practicable:

1) the pilot should establish contact with other aircraft, if possible, on the appropriate VHF interpilot air-to-air frequency; and

2) one (or both) aircraft may initiate lateral offset(s) not to exceed 2 NM from the assigned route(s) or track(s), provided that:

a) as soon as it is practicable to do so, the offsetting aircraft notify ATC that temporary lateral offset has been taken and specify the reason for doing so; and

b) the offsetting aircraft notify ATC when reestablished on assigned route(s) or track(s).

Note: In the contingency circumstances above, ATC will not issue clearances for lateral offsets and will not normally respond to action taken by pilots.

Route centre line track	Deviations > 19 KM (10 NM)	Level change
EAST 000-179 MAG	LEFT RIGHT	DESCEND 90 M (300 FT) CLIMB 90 M (300 FT)
WEST 180-359 MAG	LEFT RIGHT	CLIMB 90 M (300 FT) DESCEND 90 M (300 FT)

12.2 Wake Turbulence Categories

With the purpose to preserve safety and to limit the effects of the separation prescriptions on airports capacity, air traffic control applies the following categories to separate aircraft in the approach and departure phases of flight:

Category	MTOM in KG
LIGHT L	7000 KG or less
MEDIUM M	more than 7 000 KG and less than 136 000 KG
HEAVY H	136 000 KG and more

12.3 Separation Criteria

For wake turbulence separation purposes, two parallel runways less than 760 M apart, or a helipad less than 760 M from a runway, will be considered as one runway.

The appropriate wake turbulence radar separation, as shown in the table below, are applied between aircraft in the approach and departure phases of flight, when:

a) an aircraft is operating directly behind another aircraft at the same altitude or less than 1000 FT below; or

b) an aircraft is crossing behind another aircraft at the same altitude or less than 1000 FT below; or both

c) are using the same runway, or parallel runways separated by less than 760 M.

	Lead			
Follow	**HEAVY**	**MEDIUM**	**SMALL**	**LIGHT**
HEAVY	4 NM	N/A	N/A	N/A
MEDIUM	5 NM	N/A	N/A	N/A
LIGHT	6 NM	5 NM	N/A	N/A

Aircraft carrying out missed approaches or low goarounds are considered as a departure relating to separation. In case of a missed approach procedure or a low go-around in the opposite direction of the succeeding departure, a separation of 2 minutes is applied between an aircraft of category M or L and an overflying aircraft of category H.

OYSC FIR (ASPUX, KIVEL, IMKAD, KAPET, PUTRA, SABEL)	R401 - MUSAP	MUSAP / OMDW, OMDM, OMDB, OMSJ, OMRK

Note: For further restrictions see full route details in ENR 3 section.
Note 1: For traffic landing in northern UAE.
Note 2: Except for traffic intending to exit via LUDID.
Note 3: Unless traffic is planning to route through the Tehran FIR.
Note 4: Planning to route through the Tehran FIR.
Note 5: LABRI is not available for traffic overflying OMAE FIR exiting OOMM FIR via DENDA, APELO, ALPOR, RASKI and PARAR.

2. DEPARTING ROUTES

The following standard routings apply for traffic departing in Muscat FIR:

Departure airport	Destination	Route/Exit point
OOMS	VAGO, VCBI, VOBL, VOCB, VOCL, VOCI, VOML, VOTR, VOTV	KITAL, LOTAV, REXOD, TOTOX
	VAPO, VOMM	PARAR, TOTOX
	VOHS	RASKI
	VABB	RASKI, PARAR
	Northwestbound (1,2)	Q978 - ITRAX (3)
	OMSJ, OMRK	T508 - DAPOK - T509 - PASOV - B540 - KUPMA
	OMDB	T508 - SOLUD - GISMO
	OMDW, OMDM	T508 - DAPOK - T507 - TAPRA - M762 - VAXAS
	Northern UAE airports	T508 - DAPOK - T507/T509
	OOKB	P513-BUBAS
OOSA	OOMS, OOMN	OOSA - DAXAM - P316 - MCT (DVOR/DME)
	Northern UAE airports	OOSA - DAXAM - P316 - DEDSO - R401 - MUSAP
	Southern UAE airports	OOSA - DAXAM - P316 - DEDSO - R401 - DOLFI - Z855 - SODEX
	Northbound	OOSA - DAXAM - P316 - DEDSO - R401 - HAI (DVOR/DME) - then planned route
	OOSH	OOSA - DAXAM - P316 - DEDSO - R401 - VELIK - P304 - EMISO - Q730 - LADBI
OOTH	OMDB, OMRK, OMSJ	R401 - MUSAP
OOSH	Southbound and Eastbound	BOTAM - Y855 - LAKLU then planned route
	Northern UAE airports	VAXAS
	Southern UAE airports	ITRAX
	OOSA	OOSH - BOTAM - Y855 - LAKLU - R402 - HAI (DVOR/DME) - B400 - ASTUN

Note 1: T507 - ATC may re-route traffic to PASOV (B540) to facilitate the efficient flow or traffic into northern UAE airports.
Note 2: T509 - ATC may re-route traffic to TAPRA (M762) to facilitate the efficient flow or traffic into northern UAE airports.
Note 3: Flights overflying OIIX FIR exit via SOLUD.

3. ARRIVING ROUTES

The following standard routings apply for traffic arriving in Muscat FIR:

Arrival airport	From	Entry point/Route
OOMS	DAXAM	OOSA - DAXAM - P316 (2)
	OYSC FIR	KAPET - UB535 - SLL (DVOR/DME) - P316 - MCT (DVOR/DME)
	OMAE FIR (1)	RETAS - N685 - PUTSO - LAKLU - G216 - MCT (DVOR/DME)
	OMAE FIR (1)	TARDI - N629 - MUSUK - T511 - MCT (DVOR/ DME) (3)
	VABF FIR via L444 and N881	RASKI - N881 - KIPOL - L444 - VUSIN - N767 - ELIGO - L631 - MCT (DVOR/DME)
	UB424	UB424 - GISKA - P316 - MCT (DVOR/DME)
	OOKB, OMFJ, Northern Arrivals	P513 - MCT (DVOR/DME)
OOSH	OOMS	OOMS - P513 - MIXAM - P574 - DAPOK - Y623 - GIVLA (OOSH ARR)
	OOSA	OOSA - DAXAM - P316 - DEDSO - R401 - VELIK - P304 - EMISO - Q730 - LADBI
	RETAS	RETAS - N685 - KOBIM - Q730 - LADBI

Note 1: Eastbound traffic overflying OMAE FIR intending to land at OOMS.
Note 2: For overfly use B400 or R401, after DEDSO traffic landing OOMS continue on P316.

ENR 1.10 FLIGHT PLANNING

(Restriction, limitation or advisory information)

1. REQUIREMENT FOR THE SUBMISSION OF A FLIGHT PLAN

1.1 i Operators of all flights within the Muscat FIR are required to submit a flight plan;

ii Operators of local flights, i.e., those which will remain within the Muscat TMA or Salalah CTR may satisfy the above requirements by notifying the appropriate ATSU of:

a) the aircraft call sign (and registration, if different);

b) the ETD and brief details of the intended flight;

c) the destination.

1.2 All Aircraft operators shall submit their Flight Plans in accordance with the ICAO format not more than 120 hours and at least 60 minutes prior to estimated offblocks time (EOBT) and / or entering the Muscat FIR.

Note: Oman does not use the Intermediate Stop procedure as detailed in ICAO Doc. 4444 – Section 11, paragraph 11.4.2.2.2.3

1.3 Flights inbound to or overflying Muscat FIR airspace with no flight plan (FPL) are subject to be held at the boundary or denied access to the airspace until FPL is received.

1.4 Time of submission

A flight plan shall be submitted at least 60 minutes prior to departure, taking into account the requirements for timely information to ATS units within the airspace along the proposed route to be flown, including requirements for early flight plan submission for Air Traffic Flow Management (ATFM) purposes.

Note: Due to automation within the Muscat ACC it is imperative that all operators operating within or overflying the MUSCAT FIR file delay messages of 30 min or more from the dep time given in the FPL. Failure to do so will result in the termination of flight plan data and a subsequent delay to the operation of that particular flight.

1.5 Place of submission

a) Flight plans shall be submitted via the Air Traffic Services Reporting Office (ARO) at the departure aerodrome.

b) All flight plans shall be submitted by AFTN or email

Note 1: All FPLs shall be submitted to the following addresses:

AFS: Refer to ENR 1.11 - Addressing of Flight Plan messages

Email:

Muscat: briefing@caa.gov.om

Salalah: SLL-AIS@caa.gov.om

Note 2: ARO will distribute the FPLs to all related FIRs, Destination and Alternate Aerodromes.

c) For VFR flights between uncontrolled aerodromes, operating along designated VFR routes in a TMA, a flight plan shall be submitted by email to the nearest ARO.

d) For domestic flights from an uncontrolled to a controlled aerodrome a flight plan shall be submitted by email to the ARO at the destination.

1.6 VFR flight plan for alerting service only

Alerting service is, in principle, provided to flights for which a flight plan has been submitted.

1.7 Contents and form of a flight plan

a) ICAO flight plan forms are available at AROs and airport offices at uncontrolled aerodromes. The instructions for completing those forms shall be complied with.

b) Flight plans concerning IFR flights along ATS routes need not include FIR-boundary estimates. Inclusion of FIR-boundary estimates is, however required for off-route IFR flights and international VFR flights.

c) When a flight plan is submitted by telephone, teletype or telefax, the sequence of items of the flight plan-form shall be strictly followed.

1.8 Adherence to ATS route structure

No flight plans shall be filed for routes deviating from the published ATS route structure, unless prior permission has been obtained from the appropriate ATC authorities.

1.9 Authorization for special flights

Flights of a specific character such as survey flights, scientific research flights, etc., may be exempted from the restriction specified above.

Request for exemption shall be mailed so as to be received at least one week before the intended day of operation to:

Postal Address:
Civil Aviation Authority
P. O. Box 1
POSTAL CODE 111
MUSCAT

Sultanate of Oman

AFS Address: OOMSYAYX

Telefax: (968) 24 510122

1.10 Maximum cruising levels for short-range flights

It is generally recommended not to select levels above FL240 for flights up to a distance of 300 NM.

2. OPERATION OF REPETITIVE FLIGHT PLAN (RPL)

RPLs are not accepted and all operators are required to file a full flight plan in accordance with ENR 1.10.

3. CHANGES TO THE SUBMITTED FLIGHT PLAN

3.1 All changes to a flight plan submitted for an IFR flight or a controlled VFR flight and significant changes to a flight plan submitted for an uncontrolled VFR flight shall be reported as soon as possible to the appropriate ATS unit. In the event of a delay in departure of 30 minutes or more for a flight for which a flight plan has been submitted, the flight plan shall be amended or a new flight plan shall be submitted after the old plan has been canceled. It is imperative that standard ICAO CHG, DLA, CNL protocols are used.

Note 1: If a delay in departure of a controlled flight is not properly reported, the relevant flight plan data may no longer be readily available to the appropriate ATS unit when a clearance is ultimately requested, which will consequently result in extra delay for the flight.

Note 2: If a delay in departure (or cancellation) of an uncontrolled VFR flight is not properly reported, alerting or search and rescue action may be unnecessarily initiated when the flight fails to arrive at the destination aerodrome within 30 minutes after its current ETA.

3.2 Whenever a flight, for which a flight plan has been submitted, is canceled, the appropriate ATS unit shall be informed immediately.

3.3 Changes to a current flight plan for a controlled flight during flight shall be reported or requested, subject to the provisions in ICAO Annex 2, 3.6.2. (Adherence to flight plan). Significant changes to a flight plan for an uncontrolled VFR flight include changes in endurance or in the total number of persons on board and changes in time estimates of 3 minutes or more.

3.4 Arrival report (closing a flight plan)

A report of arrival shall be made at the earliest possible moment after landing to the airport office of the arrival aerodrome by any flight for which a flight plan has been submitted except when the arrival has been acknowledged by the local ATS unit. After landing at an aerodrome which is not the destination aerodrome (diversionary landing), the local ATS unit shall be specifically informed accordingly. In the absence of a local ATS unit at the aerodrome of diversionary landing, the pilot is responsible for passing the arrival report to the destination aerodrome.

Arrival reports shall contain the following elements of information:

a) aircraft identification

b) departure aerodrome

c) destination aerodrome

d) time of arrival

In the case of diversion, insert the "arrival aerodrome" between "destination aerodrome" and "time of arrival".

4. FLIGHT PLAN

4.1 Flight Plan Form

4.1.1 An operator shall, prior to departure

a) ensure that, where the flight is intended to operate on a route or in an area where a navigation specification is prescribed, it has an appropriate RNP approval, and that all conditions applying to that approval will be satisfied;

b) ensure that, where operation in reduced vertical separation minimum (RVSM) airspace is planned, it has the required RVSM approval;

c) ensure that, where the flight is intended to operate where a RCP specification is prescribed, it has an appropriate approval, and that all conditions applying to that approval will be satisfied; and

d) ensure that, where the flight is intended to operate where a RSP specification is prescribed, it has an appropriate RSP approval, and that all conditions applying to that approval will be satisfied.

4.2 Description of air traffic control clearances

4.2.1 Route of flight

The route of flight shall be detailed in each clearance when deemed necessary. The phrase “cleared flight planned route” may be used to describe any route or portion thereof, provided the route or portion thereof is identical to that filed in the flight plan and sufficient routing details are given to definitely establish the aircraft on its route. The phrases “cleared (designation) departure” or “cleared (designation) arrival” may be used when standard departure or arrival routes have been established by the appropriate ATS authority and published in Aeronautical Information Publication (AIP).

5. RNAV OPERATIONS

For Flight Planning purposes all RNAV 5 operators will also be permitted to file Flight Plans routing via all new RNAV 1 routes within the Muscat FIR.

6. INSTRUCTIONS FOR COMPLETING ICAO FLIGHT PLAN FORM

6.1 Record flight plan data on ICAO Flight Plan Form (see page ENR 1.10-21). Adhere closely to the prescribed formats and manner of specifying data.

6.2 Complete Items 7 to 19 as indicated hereunder. Where excess space is available, leave unused spaces blank. Insert all clock times in 4 figures UTC. Insert all estimated elapsed times in 4 figures (hours and minutes).

6.3 Contents of ICAO Flight Plan including the amendment 1 to the 16th Edition of the Doc 4444.

6.3.1 Item 7. AIRCRAFT IDENTIFICATION (MAXIMUM 7 CHARACTERS):

Insert one of the following aircraft identifications, not exceeding 7 alphanumeric characters and without hyphens or symbols:

a) ICAO designator for the aircraft operating agency followed by the flight identification (e.g. KLM511, NGA213, JTR25) when in radiotelephony the call sign to be used by the aircraft will consist of the ICAO telephony designator for the operating agency followed by the flight identification (e.g. KLM511, NIGERIA 213, JESTER 25); or

b) the nationality or common mark and registration mark of the aircraft (e.g. EIAKO, 4XBCD, N2567GA), when:

1) in radiotelephony the call sign to be used by the aircraft will consist of this identification alone (e.g. CGAJS), or preceded by the ICAO telephony designator for the aircraft operating agency (e.g. BLIZZARD CGAJS);

2) the aircraft is not equipped with radio.

Note 1) Standards for nationality, common and registration marks to be used are contained in Annex 7, Chapter 2.

Note 2) Provisions for the use of radiotelephony call signs are contained in Annex 10, Volume II, Chapter 5. ICAO designators and telephony designators for aircraft operating agencies are contained in Doc 8585 — Designators for Aircraft Operating Agencies, Aeronautical Authorities and Services.

6.3.2 Item 8. FLIGHT RULES AND TYPE OF FLIGHT (ONE OR TWO CHARACTERS):

Flight rules

Insert one of the following letters to denote the category of flight rules with which the pilot intends to comply:

I if it is intended that the entire flight will be operated under the IFR

V if it is intended that the entire flight will be operated under the VFR

Y if the flight initially will be operated under the IFR, followed by one or more subsequent changes of flight rules or

Z if the flight initially will be operated under the VFR, followed by one or more subsequent changes of flight rules

Specify in Item 15 the point or points at which a change of flight rules is planned.

Type of Flight

Insert one of the following letters to denote the type of flight when so required by the appropriate ATS authority:

S if scheduled air service

N if non-scheduled air transport operation

G if general aviation

M if military

X if other than any of the defined categories above.

Specify status of a flight following the indicator STS in Item 18, or when necessary to denote other reasons for specific handling by ATS, indicate the reason following the indicator RMK in Item 18.

6.3.3 Item 9. NUMBER AND TYPE OF AIRCRAFT AND WAKE TURBULENCE CATEGORY:

Number of aircraft (1 or 2 characters)

Insert the number of aircraft, if more than one.

Type of aircraft (2 or 4 characters)

Insert the appropriate designator as specified in ICAO Doc 8643, Aircraft Type Designators,

or, if no such designator has been assigned, or in case of formation flights comprising more than one type, insert ZZZZ, and SPECIFY in Item 18, the (numbers and) type(s) of aircraft preceded by TYP/.

Wake turbulence category (1 character)

Insert an oblique stroke followed by one of the following letters to indicate the wake turbulence category of the aircraft:

H HEAVY, to indicate an aircraft type with a maximum certificated take-off mass of 136 000 KG or more;

M MEDIUM, to indicate an aircraft type with a maximum certificated take-off mass of less than 136 000 KG but more than 7000 KG;

L LIGHT, to indicate an aircraft type with a maximum certificated take-off mass of 7000 KG or less.

6.3.4 Item 10. EQUIPMENT AND CAPABILITIES

Capabilities comprise the following elements:

a) presence of relevant serviceable equipment on board the aircraft;

b) equipment and capabilities commensurate with flight crew qualifications; and

c) where applicable, authorization from the appropriate authority.

Radio communication, navigation and approach aid equipment and capabilities

Insert one letter as follows:

N if no COM/NAV/approach aid equipment for the route to be flown is carried, or the equipment is unserviceable, or

S if standard COM/NAV/approach aid equipment for the route to be flown is carried and serviceable (see Note 1),

and/or: Insert one or more of the following letters to indicate the serviceable COM/NAV/approach aid equipment and capabilities available:

A	GBAS landing system
B	LPV (APV with SBAS)
C	LORAN C
D	DME
E1	FMC WPR ACARS
E2	D-FIS ACARS
E3	PDC ACARS
F	ADF
G	GNSS (See Note 2)
H	HF RTF
I	Inertial Navigation
J1	CPDLC ATN VDL Mode 2 (See Note 3)
J2	CPDLC FANS 1/A HFDL
J3	CPDLC FANS 1/A VDL Mode 4
J4	CPDLC FANS 1/A VDL Mode 2
J5	CPDLC FANS 1/A SATCOM (INMARSAT)

J6	CPDLC FANS 1/A SATCOM (MTSAT)
J7	CPDLC FANS 1/A SATCOM (Iridium)
K	MLS
L	ILS
M1	ATC SATVOICE (INMARSAT)
M2	ATC SATVOICE (MTSAT)
M3	ATC SATVOICE (Iridium)
O	VOR
P1	CPDLC RCP 400 (See Note 7)
P2	CPDLC RCP 240 (See Note 7)
P3	SATVOICE RCP 400 (See Note 7)
P4-P9	Reserved for RCP
R	PBN approved (See Note 4)
T	TACAN
U	UHF RTF
V	VHF RTF
W	RVSM approved
X	MNPS approved
Y	VHF with 8.33 KHz channel spacing capability
Z	Other equipment carried or other capabilities (See Note 5)

Any alphanumeric characters not indicated above are reserved.

Note 1) If the letter S is used, standard equipment is considered to be VHF RTF, VOR and ILS, unless another combination is prescribed by the appropriate ATS authority.

Note 2) If the letter G is used, the types of external GNSS augmentation, if any, are specified in Item 18 following the indicator NAV/ and separated by a space.

Note 3) See RTCA/EUROCAE Interoperability Requirements Standard for ATN Baseline 1 (ATN B1 INTEROP Standard – DO-280B/ED-110B) for data link services air traffic control clearance and information/air traffic control communications management/air traffic control microphone check.

Note 4) If the letter R is used, the performancebased navigation levels that can be met are specified in Item 18 following the indicator PBN/. Guidance material on the application of performance-based navigation to a specific route segment, route or area is contained in the Performancebased Navigation (PBN) Manual (Doc 9613).

Note 5) If the letter Z is used, specify in Item 18 the other equipment carried or other capabilities, preceded by COM/, NAV/ and/or DAT, as appropriate.

Note 6) Information on navigation capability is provided to ATC for clearance and routing purposes.

Note 7) Guidance material on the application of performance-based communication, which prescribes RCP to an air traffic service in a specific area, is contained in the Performance-based Communication and Surveillance (PBCS) Manual (DOC 9869).

Surveillance equipment and capabilities

Insert N if no surveillance equipment for the route to be flown is carried, or the equipment is unserviceable,

or, insert one or more of the following descriptors, to a maximum of 20 characters, to describe the serviceable surveillance equipment and/or capabilities on board:

SSR Modes A and C

A Transponder — Mode A (4 digits — 4 096 codes)

C Transponder — Mode A (4 digits — 4 096 codes) and Mode C

SSR Mode S

E Transponder — Mode S, including aircraft identification, pressure-altitude and extended squitter (ADS-B) capability

H Transponder — Mode S, including aircraft identification, pressure-altitude and enhanced surveillance capability

I Transponder — Mode S, including aircraft identification, but no pressure-altitude capability

L Transponder — Mode S, including aircraft identification, pressure-altitude, extended squitter (ADSB) and enhanced surveillance capability

P Transponder — Mode S, including pressure-altitude, but no aircraft identification capability

S Transponder — Mode S, including both pressure-altitude and aircraft identification capability

X Transponder — Mode S with neither aircraft identification nor pressure-altitude capability

Note) Enhanced surveillance capability is the ability of the aircraft to down-link aircraft derived data via a Mode S transponder.

ADS-B

B1 ADS-B with dedicated 1 090 MHz ADS-B “out” capability

B2 ADS-B with dedicated 1 090 MHz ADS-B “out” and “in” capability

U1 ADS-B “out” capability using UAT

U2 ADS-B “out” and “in” capability using UAT

V1 ADS-B “out” capability using VDL Mode 4

V2 ADS-B “out” and “in” capability using VDL Mode 4

ADS-C

D1 ADS-C with FANS 1/A capabilities

G1 ADS-C with ATN capabilities

Alphanumeric characters not indicated above are reserved.

Example: ADE3RV/HB2U2V2G1

Note 1) The RSP specification(s), if applicable, will be listed in Item 18 following the indicator SUR/. Guidance material on the application of performance-based surveillance, which prescibes the RSP to an air traffic service in a specific area, is contained in the Performance-based Communication and Surveillance (PBCS) Manual (DOC 9869).

Note 2) Additional surveillance equipment or capabilities will be listed in Item 18 following the indicator SUR/, as required by the appropriate ATS authority.

6.3.5 Item 13. DEPARTURE AERODROME AND TIME (8 CHARACTERS):

Insert the ICAO four-letter location indicator of the departure aerodrome as specified in Doc 7910, Location Indicators

or, if no location indicator has been assigned, Insert ZZZZ and SPECIFY, in Item 18, the name and location of the aerodrome preceded by DEP/,

or, the first point of the route or the marker radio beacon preceded by DEP/…, if the aircraft has not taken off from the aerodrome,

or, if the flight plan is received from an aircraft in flight, insert AFIL, and SPECIFY, in Item 18, the ICAO four-letter location indicator of the location of the ATS unit from which supplementary flight plan data can be obtained, preceded by DEP/.

then, without a space, insert for a flight plan submitted before departure, the estimated off-block time (EOBT),

or, for a flight plan received from an aircraft in flight, the actual or estimated time over the first point of the route to which the flight plan applies.

6.3.6 Item 15. ROUTE:

Insert the first cruising speed as in (a) and the first cruising level as in (b), without a space between them.

then, following the arrow, insert the route description as in (c).

(a) Cruising speed (maximum 5 characters)

Insert the True airspeed for the first or the whole cruising portion of the flight, in terms of:

Kilometres per hour, expressed as K followed by 4 figures (e.g. K0830), or

Knots, expressed as N followed by 4 figures (e.g. N0485), or

True Mach number, when so prescribed by the appropriate ATS authority, to the nearest hundredth of unit Mach, expressed as M followed by 3 figures (e.g. M082).

(b) Cruising level (maximum 5 characters)

Insert the planned cruising level for the first or the whole portion of the route to be flown, in terms of:

Flight level, expressed as F followed by 3 figures (e.g. F085; F330), or *Standard metric level in tens of metres, expressed as S followed by 4 figures (e.g. S1130), or

Altitude in hundreds of feet, expressed as A followed by 3 figures (e.g. A045; A100), or

Altitude in tens of metres, expressed as M followed by 4 figures (e.g. M0840), or

for uncontrolled VFR flights, the letters VFR.

* When so prescribed by the appropriate ATS authorities

(c) Route (including changes of speed, level and/or flight rules)

Flights along designated ATS routes

Insert if the departure aerodrome is located on or connected to the ATS route, the designator of the first ATS route,

or, if the departure aerodrome is not on or connected to the ATS route, the letters DCT followed by the point of joining the first ATS route, followed by the designator of the ATS route.

then, insert each point at which either a change of speed and/or level is planned to commence, or a change of ATS route, and/or a change of flight rules is planned,

Note) When a transition is planned between a lower and upper ATS route and the routes are oriented in the same direction, the point of transition need not be inserted.

Followed in each case

By the designator of the next ATS route segment, even if the same as the previous one,

or, by DCT, if the flight to the next point will be outside a designated route, unless both points are defined by geographical coordinates.

Flights outside designated ATS routes

Insert points normally not more than 30 minutes flying time or 370 KM (200 NM) apart, including each point at which a change of speed or level, a change of track, or a change of flight rules is planned.

or, when required by appropriate ATS authority (ies),

Define the track of flights operating predominantly in an east-west direction between 70°N and 70°S by reference to significant points formed by the intersections of half or whole degrees of latitude with meridians spaced at intervals of 10 degrees of longitude. For flights operating in areas outside those latitudes the tracks shall be defined by significant points formed by the intersection of parallels of latitude with meridians normally spaced at 20 degrees of longitude. The distance between significant points shall, as far as possible, not exceed one hour's flight time. Additional significant points shall be established as deemed necessary.

For flights operating predominantly in a north-south direction, define tracks by reference to significant points formed by the intersection of whole degrees of longitude with specified parallels of latitude which are spaced at 5 degrees.

Insert DCT between successive points unless both points are defined by geographical coordinates or by bearing and distance.

Use only: the conventions in (1) to (5) below and SEPARATE each sub-item by a space.

(1) ATS route (2 to 7 characters)

The coded designator assigned to the route or route segment including, where appropriate, the coded designator assigned to the standard departure or arrival route (e.g. BCN1, Bl, R14, UB10, KODAP2A).

Note) Provisions for the application of route designators are contained in Annex 11, Appendix 1.

(2) Significant point (2 to 11 characters)

The coded designator (2 to 5 characters) as-signed to the point (e.g. LN, MAY, HADDY),

or, if no coded designator has been assigned, one of the following ways:

- Degrees only (7 characters):

2 figures describing latitude in degrees, followed by "N" (North) or "S" (South), followed by 3 figures describing longitude in degrees, followed by "E" (East) or "W" (West). Make up the correct number of figures, where necessary, by insertion of zeros, e.g. 46N 078W.

- Degrees and minutes (11 characters):

4 figures describing latitude in degrees and tens and units of minutes followed by “N” (North) or “S” (South), followed by 5 figures describing longitude in degrees and tens and units of minutes, followed by “E” (East) or “W” (West). Make up the correct number of figures, where necessary, by insertion of zeros, e.g. 4620N 07805W.

- Bearing and distance from a reference point:

The identification of the reference point, followed by the bearing from the point in the form of 3 figures giving degrees magnetic, followed by the distance from the point in the form of 3 figures expressing nautical miles. In areas of high latitude where it is determined by the appropriate authority that reference to degrees magnetic is impractical, degrees true may be used. Make up the correct number of figures, where necessary, by insertion of zeros — e.g. a point 180° magnetic at a distance of 40 nautical miles from VOR “DUB” should be expressed as DUB180040.

(3) Change of speed or level (maximum 21 characters)

The point at which a change of speed (5% TAS or 0.01 Mach or more) or a change of level is planned to commence, expressed exactly as in (2) above, followed by an oblique stroke and both the cruising speed and the cruising level, expressed exactly as in (a) and (b) above, without a space between them, even when only one of these quantities will be changed.

Examples:
LN/N0284A045
MAY/N0305Fl80
HADDY/N0420F330
4602N07805W/N0500F350
46N078W/M082F330
DUB180040/N0350M0840

(4) Change of flight rules (maximum 3 characters)

The point at which the change of flight rules is planned, expressed exactly as in (2) or (3) above as appropriate, followed by a space and one of the following:

VFR if from IFR to VFR

IFR if from VFR to IFR

Examples:
LN VFR
LN/N0284A050 IFR

(5) Cruise climb (maximum 28 characters)

The letter C followed by an oblique stroke; THEN the point at which cruise climb is planned to start, expressed exactly as in (2) above, followed by an oblique stroke; THEN the speed to be maintained during cruise climb, expressed exactly as in (a) above, followed by the two levels defining the layer to be occupied during cruise climb, each level expressed exactly as in (b) above, or the level above which cruise climb is planned followed by the letters PLUS, without a space between them.

Examples:
C/48N 050W/M082F290F350
C/48N 050W/M082F290PLUS
C/52N 050W/M220F580F620.

6.3.7 Item 16. DESTINATION AERODROME AND TOTAL ESTIMATED ELAPSED TIME, DESTINATION ALTERNATE AERODROME(S)

Destination aerodrome and total estimated elapsed time (8 characters)

Insert the ICAO four-letter location indicator of the destination aerodrome as specified in Doc 7910, Location Indicators,

or, if no location indicator has been assigned, Insert ZZZZ and SPECIFY in Item 18 the name and location of the aerodrome, preceded by DEST/.

then without a space insert the total estimated elapsed time.

Note) For a flight plan received from an aircraft in flight, the total estimated elapsed time is the estimated time from the first point of the route to which the flight plan applies to the termination point of the flight plan.

Destination alternate aerodrome(s)

Insert the ICAO four-letter location indicator(s) of not more than two destination alternate aerodromes, as specified in Doc 7910, Location Indicators, separated by a space,

or, if no location indicator has been assigned to the destination alternate aerodrome(s),

Insert ZZZZ and SPECIFY in Item 18 the name and location of the destination alternate aerodrome(s), preceded by ALTN/.

6.3.8 Item 18. OTHER INFORMATION

Note) Use of indicators not included under this item may result in data being rejected, processed incorrectly or lost.

Hyphens or oblique strokes should only be used as prescribed below.

Insert 0 (zero) if no other information,

or, any other necessary information in the sequence shown hereunder, in the form of the appropriate indicator selected from those defined hereunder followed by an oblique stroke and the information to be recorded:

STS/ Reason for special handling by ATS, e.g. a search and rescue mission, as follows:

ALTRV	for a flight operated in accordance with an altitude

	reservation;
ATFMX	for a flight approved for exemption from ATFM measures by the appropriate ATS authority;
FFR	fire-fighting
FLTCK	flight check for calibration of navaids;
HAZMAT	for a flight carrying hazardous material;
HEAD	a flight with Head of State status;
HOSP	for a medical flight declared by medical authorities;
HUM	for a flight operating on a humanitarian mission;
MARSA	for a flight for which a military entity assumes responsibility for separation of military aircraft;
MEDEVAC	for a life critical medical emergency evacuation;
NONRVSM	for a non-RVSM capable flight intending to operate in RVSM airspace;
SAR	for a flight engaged in a search and rescue mission; and
STATE	for a flight engaged in military, customs or police services.

Other reasons for special handling by ATS shall be denoted under the designator RMK/.

PBN/ Indication of RNAV and/or RNP capabilities. Include as many of the descriptors below, as apply to the flight, up to a maximum of 8 entries, i.e. a total of not more than 16 characters.

	RNAV SPECIFICATIONS
A1	RNAV 10 (RNP 10)
B1	RNAV 5 all permitted sensors
B2	RNAV 5 GNSS
B3	RNAV 5 DME/DME
B4	RNAV 5 VOR/DME
B5	RNAV 5 INS or IRS
B6	RNAV 5 LORANC
C1	RNAV 2 all permitted sensors
C2	RNAV 2 GNSS
C3	RNAV 2 DME/DME
C4	RNAV 2 DME/DME/IRU
D1	RNAV 1 all permitted sensors
D2	RNAV 1 GNSS
D3	RNAV 1 DME/DME
D4	RNAV 1 DME/DME/IRU

	RNP SPECIFICATIONS
L1	RNP 4
O1	Basic RNP 1 all permitted sensors
O2	Basic RNP 1 GNSS
O3	Basic RNP 1 DME/DME
O4	Basic RNP 1 DME/DME/IRU
S1	RNP APCH
S2	RNP APCH with BARO-VNAV
T1	RNP AR APCH with RF (special authorization required)
T2	RNP AR APCH with RF (special authorization required)

Combinations of alphanumeric characters not indicated above are reserved.

NAV/ Significant data related to navigation equipment, other than specified in PBN/, as required by the appropriate ATS authority. Indicate GNSS augmentation under this indicator, with a space between two or more methods of augmentation, e.g. NAV/ GBAS SBAS.

COM/ Indicate communications equipment and capabilities not specified in Item 10 a).

DAT/ Indicate data equipment and capabilities not specified in 10 a).

SUR/ Indicate surveillance equipment and capabilities not specified in Item 10 b). Indicate as many RSP specification(s) as apply to the flight, using designator(s) with no space. Multiple RSP specifications are separated by a space. Example: RSP180 RSP400.

DEP/ Name and location of departure aerodrome, if ZZZZ is inserted in Item 13, or the ATS unit from which supplementary flight plan data can be obtained, if AFIL is inserted in Item 13. For aerodromes not listed in the relevant Aeronautical Information Publication, indicate location as follows:

With 4 figures describing latitude in degrees and tens and units of minutes followed by “N” (North) or “S” (South), followed by 5 figures describing longitude in degrees and tens and units of minutes, followed by “E” (East) or “W” (West). Make up the correct number of figures, where necessary, by insertion of zeros, e.g. 4620N 07805W (11 characters).

or, Bearing and distance from the nearest significant point, as follows:

The identification of the significant point followed by the bearing from the point in the form of 3 figures giving degrees magnetic, followed by the distance from the point in the form of 3 figures expressing nautical miles. In areas of high latitude where it is determined by the appropriate authority that reference to degrees magnetic is impractical, degrees true may be used. Make up the correct number of figures, where necessary, by insertion of zeros, e.g. a point of 180° magnetic at a distance of 40 nautical miles from VOR “DUB” should be expressed as DUB180040.

or, The first point of the route (name or LAT/ LONG) or the marker radio beacon, if the aircraft has

not taken off from an aerodrome.

DEST/ Name and location of destination aerodrome, if ZZZZ is inserted in Item 16. For aerodromes not listed in the relevant Aeronautical Information Publication, indicate location in LAT/ LONG or bearing and distance from the nearest significant point, as described under DEP/ above.

DOF/ The date of flight departure in a six-figure format (YYMMDD, where YY equals the year, MM equals the month and DD equals the day).

REG/ The nationality or common mark and registration mark of the aircraft, if different from the aircraft identification in Item 7.

EET/ Significant points or FIR boundary designators and accumulated estimated elapsed times from take-off to such points or FIR boundaries, when so prescribed on the basis of regional air navigation agreements, or by the appropriate ATS authority.

Examples:
EET/CAP0745 XYZ0830
EET/EINN0204

SEL/ SELCAL Code, for aircraft so equipped.

TYP/ Type(s) of aircraft, preceded if necessary without a space by number(s) of aircraft and separated by one space, if ZZZZ is inserted in Item 9.

Example: TYP/2F15 5F5 3B2

CODE/ Aircraft address (expressed in the form of an alphanumerical code of six hexadecimal characters) when required by the appropriate ATS authority.

Example: “F00001” is the lowest aircraft address contained in the specific block administered by ICAO.

DLE/ En-route delay or holding, insert the significant point(s) on the route where a delay is planned to occur, followed by the length of delay using four figure time in hours and minutes (hhmm).

Example: DLE/MDG0030

OPR/ ICAO designator or name of the aircraft operating agency, if different from the aircraft identification in Item 7.

ORGN/ The originator’s 8 letter AFTN address or other appropriate contact details, in cases where the originator of the flight plan may not be readily identified, as required by the appropriate ATS authority.

Note) In some areas, flight plan reception centres may insert the ORGN/ identifier and originator’s AFTN address automatically.

PER/ Aircraft performance data, indicated by a single letter as specified in the Procedures for Air

Navigation Services — Aircraft Operations (PANS-OPS, Doc 8168), Volume I — Flight Procedures, if so prescribed by the appropriate ATS authority.

ALTN/ Name of destination alternate aerodrome(s), if ZZZZ is inserted in Item 16. For aerodromes not listed in the relevant Aeronautical Information Publication, indicate location in LAT/ LONG or bearing and distance from the nearest significant point, as described in DEP/ above.

RALT/ ICAO four letter indicator(s) for En-route alternate(s), as specified in Doc 7910, Location Indicators, or name(s) of en-route alternate aerodrome(s), if no indicator is allocated. For aerodromes not listed in the relevant Aeronautical Information Publication, indicate location in LAT/LONG or bearing and distance from the nearest significant point, as described in DEP/ above.

TALT/ ICAO four letter indicator(s) for take-off alternate, as specified in Doc 7910, Location Indicators, or name of take-off alternate aerodrome, if no indicator is allocated. For aerodromes not listed in the relevant Aeronautical Information Publication, indicate location in LAT/LONG or bearing and distance from the nearest significant point, as described in DEP/ above.

RIF/ The route details to the revised destination aerodrome, followed by the ICAO four-letter location indicator of the aerodrome. The revised route is subject to reclearance in flight.

Examples:
RIF/DTA HEC KLAX
RIF/ESP G94 CLA YPPH

RMK/ Any other plain-language remarks when required by the appropriate ATS authority or deemed necessary.

6.3.9 Item 19: SUPPLEMENTARY INFORMATION

Endurance

After E/ Insert a 4-figure group giving the fuel endurance in hours and minutes.

Persons on board

After P/ Insert the total number of persons (passengers and crew) on board, when required by the appropriate ATS authority. Insert TBN (to be notified) if the total number of persons is not known at the time of filing.

Emergency and survival equipment

R/ (RADIO)

CROSS OUT U if UHF on frequency 243.00 MHz is not available.

CROSS OUT V if VHF on frequency 121.50 MHz is not available.

CROSS OUT E if emergency locator transmitter (ELT) is not available.

S/ (SURVIVAL EQUIPMENT)

CROSS OUT all indicators if survival equipment is not carried.

CROSS OUT P if polar survival equipment is not carried.

CROSS OUT D if desert survival equipment is not carried.

CROSS OUT M if maritime survival equipment is not carried.

CROSS OUT J if jungle survival equipment is not carried.

J/ (JACKETS)

CROSS OUT all indicators if life jackets are not carried.

CROSS OUT L if life jackets are not equipped with lights.

CROSS OUT F if life jackets are not equipped with fluorescein.

CROSS OUT U or V or both as in R/ above to indicate radio capability of jackets, if any.

D/ (DINGHIES) (NUMBER)

CROSS OUT indicators D and C if no dinghies are carried, or INSERT number of dinghies carried; and

(CAPACITY)

Insert total capacity, in persons, of all dinghies carried; and

(COVER)

CROSS OUT indicator C if dinghies are not covered; and

(COLOUR)

INSERT colour of dinghies if carried.

A/ (AIRCRAFT COLOUR AND MARKINGS)

INSERT colour of aircraft and significant markings.

N/ (REMARKS)

CROSS OUT indicator N if no remarks, or INDICATE any other survival equipment carried and any other remarks regarding survival equipment.

C/ (PILOT)

INSERT name of pilot-in-command.

Filed by

Insert the name of the unit, agency or person filing the flight plan.

1. ICAO model flight plan form

ENR 1.11 ADDRESSING OF FLIGHT PLAN MESSAGES

1. GENERAL

Flight movement messages relating to traffic into or via the Muscat FIR shall be addressed as stated below in order to warrant correct relay and delivery.

Note: Flight movement messages in this context comprise flight plan messages, amendment messages relating thereto and flight plan cancellation messages (ICAO PANS-ATM, Doc 4444, Chapter 10, 10.2 refers).

CATEGORY OF FLIGHT	ROUTE	MESSAGE ADDRESS
1	**2**	**3**
IFR	into or via MUSCAT FIR and, in addition, for flights:	OOMMZQZX
	- into MUSCAT TMA	OOMSZTZX
	- into SALALAH CTR	OOSAZTZX
VFR	NIL	OOMMZFZX

BLANK

ENR 1.12 INTERCEPTION OF CIVIL AIRCRAFT

1. GENERAL

The following procedures and visual signals apply over the territory and territorial waters of the Sultanate of Oman in the event of interception of an aircraft.

1.1 An aircraft which is intercepted by another aircraft shall immediately:

a) follow the instructions given by the intercepting aircraft, interpreting and responding to visual signals in accordance with the specifications;

b) notify, if possible, the ATS unit responsible for the airspace in which the aircraft is flying;

c) make a general call on the emergency frequency 121.500 MHz to attempt to establish radio communication with the intercepting aircraft or with the appropriate intercept control unit, giving the identity of the intercepted aircraft, the nature of the flight, and if no contact has been established and it is practical, repeat the call on the emergency frequency 243.000 MHz;

d) if equipped with SSR transponder, select Mode A, Code 7700, unless otherwise instructed by the appropriate ATS unit.
1.2 If radio contact is established during interception but communication in a common language is not possible, attempts shall be made to convey instructions, acknowledgment of instructions and essential information by using the phrases and pronunciations in the following table and transmitting each phrase twice:

Phrase	Pronunciation[1]	Meaning
CALL SIGN (call sign[2])	KOL -SA-IN (call sign)	My call sign is (call sign)
WILCO	VILL -KO	Understood. Will comply
CAN NOT	KANN NOTT	Unable to comply
REPEAT	REE-PEET	Repeat your instruction
AM LOST	AM LOSST	Position unknown
MAYDAY	MAYDAY	I am in distress
HIJACK[3]	HI-JACK	I have been hijacked
LAND (place name)	LAAND (place name)	I request to land at (place name)
DESCEND	DEE SEND	I require descend

1.2.1 The following phrases shall be used by the intercepting aircraft and transmitted twice in the circumstances described in the preceding paragraph:

Phrase	Pronunciation[1]	Meaning
CALL SIGN	KOL -SA-IN	What is your call sign?
FOLLOW	FOL -LO	Follow me
DESCEND	DEE SEND	Descend for landing
YOU LAND	YOU LAAND	Land at this aerodrome

Phrase	Pronunciation[1]	Meaning
PROCEED	PRO-SEED	You may proceed

[1] Syllables to be emphasized are printed in bold letters.

[2] The call sign required to be given is that used in radiotelephony communications with air traffic services units and corresponding to the aircraft identification in the flight plan.

[3] Circumstances may not always permit, nor make desirable, the use of the phrase "HIJACK".

1.3 If any instructions received by radio from any sources conflict with those given by the intercepting aircraft by visual signals, the intercepted aircraft is required to request immediate clarification while continuing to comply with the visual instructions given by the intercepting aircraft.

1.4 If instructions received by radio from any source conflict with those given by the intercepting aircraft by radio, the intercepted aircraft is required to request immediate clarification while continuing to comply with the radio instructions given by the intercepting aircraft.

1.5 The visual signals detailed in the table "SIGNALS FOR USE IN THE EVENT OF INTERCEPTION" shall be used.

2. SIGNALS FOR USE IN THE EVENT OF INTERCEPTION

A. Signals Initiated by the Intercepting Aircraft and Responses by the Intercepted Aircraft				
	Signals/Commands of INTERCEPTING Aircraft		Signals/Responses of INTERCEPTED Aircraft	
Series	Meaning	Actions by Intercepting Aircraft	Meaning	Actions by Intercepted Aircraft
1	You have been intercepted. Follow Me.	AIRPLANES AND HELICOPTERS: DAY - Rocking wings from a position in front and, normally, to the left of the intercepted aircraft and, after acknowledgment, a slow level turn, normally to the left, on the desired heading. NIGHT - Same actions as by day and, in addition, flashing navigational lights at irregular intervals. Note 1: Meteorological conditions or terrain may require the intercepting aircraft to take up a position in front and to the right	Understood, will comply.	AIRPLANES: DAY - Rocking wings and following the intercepting aircraft. NIGHT - Same actions as by day and, in addition, flashing navigational lights at irregular intervals. HELICOPTERS: DAY OR NIGHT - Rocking aircraft, flashing navigational lights at irregular intervals and following the intercepting aircraft. Note: Additional action may be taken by the intercepted aircraft as prescribed above.

A. Signals Initiated by the Intercepting Aircraft and Responses by the Intercepted Aircraft				
	Signals/Commands of INTERCEPTING Aircraft		Signals/Responses of INTERCEPTED Aircraft	
Series	**Meaning**	**Actions by Intercepting Aircraft**	**Meaning**	**Actions by Intercepted Aircraft**
		of the intercepted aircraft and to make the subsequent turn to the right. Note 2: If the intercepted aircraft is not able to keep pace with the intercepting aircraft, the latter is expected to fly a series of race-track patterns and to rock its wings each time it passes the intercepted aircraft.		
2	You may proceed.	AIRPLANES AND HELICOPTERS: DAY OR NIGHT - An abrupt breakaway manoeuvre from the intercepted aircraft consisting of a climbing turn of 90 degrees or more without crossing the line of flight of the intercepted aircraft.	Understood, will comply.	AIRPLANES: DAY OR NIGHT - Rocking wings. HELICOPTERS: DAY OR NIGHT - Same as Series 1 helicopter signal.
3	Land at this aerodrome.	AIRPLANES AND HELICOPTERS: DAY - Circling aerodrome, lowering landing gear and overflying runway in direction of landing or, if the intercepted aircraft is a helicopter, overflying the helicopter landing area. NIGHT - Same as in the daytime and, in addition, showing steady landing lights.	Understood, will comply.	AIRPLANES: DAY - Lowering landing gear, following the intercepting aircraft and, if after overflying the runway landing is considered safe, proceeding to land. NIGHT - Same as in the daytime and, in addition, showing steady landing lights (if carried). HELICOPTERS: DAY OR NIGHT -

A. Signals Initiated by the Intercepting Aircraft and Responses by the Intercepted Aircraft				
	Signals/Commands of INTERCEPTING Aircraft		Signals/Responses of INTERCEPTED Aircraft	
Series	**Meaning**	**Actions by Intercepting Aircraft**	**Meaning**	**Actions by Intercepted Aircraft**
				Following the intercepting aircraft and proceeding to land, showing steady landing lights (if carried).

B. Signals Initiated by the Intercepted Aircraft and Responses by the Intercepting Aircraft				
	Signals/Responses of INTERCEPTED Aircraft		Signals/Commands of INTERCEPTING Aircraft	
Series	**Meaning**	**Actions by Intercepted Aircraft**	**Meaning**	**Actions by Intercepting Aircraft**
4	The aerodrome you have designated is inadequate for landing.	AIRPLANES: DAY - Raising the landing gear while passing over the landing runway at a height exceeding 1000 FT but not exceeding 2000 FT above the aerodrome level, and continuing to circle the aerodrome. NIGHT - Flashing landing lights while passing over the landing runway at a height exceeding 1000 FT but not exceeding 2000 FT above the aerodrome level, and continuing to circle the aerodrome. If unable to flash landing lights, flash any other lights available.	Understood, follow me. Understood, you may proceed.	AIRPLANES: DAY OR NIGHT - If it is desired that the intercepted aircraft follow the intercepting aircraft to an alternate aerodrome, the intercepting aircraft raises its landing gear and uses the Series 1 signals prescribed for intercepting aircraft. DAY OR NIGHT - If it is decided to release the intercepted aircraft, the intercepting aircraft uses the Series 2 signals prescribed for intercepting aircraft.
5	Cannot comply.	AIRPLANES: DAY OR NIGHT - regular switching on and off of all	Understood.	AIRPLANES: DAY OR NIGHT - Use Series 2 signals prescribed for

B. Signals Initiated by the Intercepted Aircraft and Responses by the Intercepting Aircraft

ENR 1.13 UNLAWFUL INTERFERENCE

1. GENERAL

The following procedures are intended for use by aircraft when unlawful interference occurs and the aircraft is unable to notify an ATS unit of this fact.

2. PROCEDURES

Unless considerations aboard the aircraft dictate otherwise, the pilot-in-command should attempt to continue flying on the assigned track and at the assigned cruising level at least until able to notify an ATS unit or within radar coverage.

When an aircraft subjected to an act of unlawful interference must depart from its assigned track or its assigned cruising level without being able to make radiotelephony contact with ATS, the pilot-in-command should, whenever possible:

a) attempt to broadcast warnings on the VHF emergency frequency and other appropriate frequencies, unless considerations aboard the aircraft dictate otherwise. Other equipment such as onboard transponders, data links, etc., should also be used when it is advantageous to do so and circumstances permit. The transponder shall be set to mode A/3 code 7500; and

b) proceed in accordance with applicable special procedures for in-flight contingencies, where such procedures have been established and promulgated in DOC 7030 - Regional Supplementary Procedures; or

c) if no applicable regional procedures have been established, proceed at a level which differs from the cruising levels normally used for IFR flight in the area by 300 M (1 000 FT) if above FL410 or by 150 M (500 FT) if below FL410.

ENR 1.14 AIR TRAFFIC INCIDENTS

1. DEFINITION OF AIR TRAFFIC INCIDENTS

1.1 Air traffic incident is used to mean a serious occurrence related to the provision of air traffic services, such as:

a) aircraft proximity (AIRPROX),

b) serious difficulty resulting in a hazard to aircraft caused, for example, by:

1) faulty procedures

2) non-compliance with procedures, or

3) failure of ground facilities.

c) damages due to birdstrikes.

1.1.1 Definitions for aircraft proximity and AIRPROX.

Aircraft proximity. A situation in which, in the opinion of the pilot or the air traffic services personnel, the distance between aircraft, as well as their relative positions and speed, has been such that the safety of the aircraft involved may have been compromised. Aircraft proximity is classified as follows:

Risk of collision. The risk classification of aircraft proximity in which serious risk of collision has existed.

Safety not assured. The risk classification of aircraft proximity in which the safety of the aircraft may have been compromised.

No risk of collision. The risk classification of aircraft proximity in which no risk of collision has existed.

Risk not determined. The risk classification of aircraft proximity in which insufficient information was available to determine the risk involved, or inconclusive or conflicting evidence precluded such determination.

AIRPROX. The code word used in an air traffic incident report to designate aircraft proximity.

1.2 Air traffic incidents are designated and identified in reports as follows:

TYPE	DESIGNATION
Air traffic incident	Incident
as a) above	AIRPROX (aircraft proximity)

TYPE	DESIGNATION
as b) 1) and 2) above	Procedure
as b) 3) above	Facility
as c) above	Birdstrike Collision

2. USE OF THE AIR TRAFFIC INCIDENT REPORT FORM

The Air Traffic Incident Report Form (see model on pages ENR 1.14-2 to 1.14-5) is intended for use:

a) by a pilot for filing a report on an air traffic incident after arrival or for confirming a report made initially by radio during flight.

Note: The form, if available on board, may also be of use in providing a pattern for making the initial report in flight.

b) by an ATS unit for recording an air traffic incident report received by radio, telephone or teleprinter.

Note: The form may be used as the format for the text of a message to be transmitted over the AFS network.

3. REPORTING PROCEDURES (INCLUDING IN-FLIGHT PROCEDURES)

3.1 The following are the procedures to be followed by a pilot who is or has been involved in an incident:

a) during flight, use the appropriate air/ground frequency for reporting an incident of major significance, particularly if it involves other aircraft, so as to permit the facts to be ascertained immediately,

b) as promptly as possible after landing submit a completed Air Traffic Incident Report Form

1) for confirming a report of an incident made initially as in a) above , or for making the initial report on such an incident if it had not been possible to report it by radio;

2) for reporting an incident which did not require immediate notification at the time of occurrence.

c) the birdstrike report form supplied by the airport authority is to be completed after landing.

3.2 An initial report made by radio should contain the following information:

a) aircraft identification;

b) type of incident, e.g. aircraft proximity,

c) the incident; 1. a) and b); 2. a), b), c), d), n); 3. a), b), c), i); 4. a), b);

d) miscellaneous: 1. e).

3.3 The confirmatory report on an incident of major significance initially reported by radio or the initial report on any other incident should be submitted to:

Postal Address:
Civil Aviation Authority
P. O. Box 1
POSTAL CODE 111
MUSCAT
Sultanate of Oman

AFS Address: OOMSYAYX

Telephone: (968) 24 519225 or 24 519315

Telefax: (968) 24 519707

Email: dirfs@caa.gov.om

The pilot should complete the Air Traffic Incident Report Form, supplementing the details of the initial reports as necessary.

Note: Where there is no ATS Flight Information Service, the report may be submitted to another ATS unit.

4. PURPOSE OF REPORTING AND HANDLING OF THE FORM

4.1 The purpose of the reporting of aircraft proximity incidents and their investigation is to promote the safety of aircraft. The degree of risk involved in an aircraft proximity incident should be determined in the incident investigation and classified as "risk of collision", "safety not assured" or "risk not determined".

4.2 The purpose of the form is to provide investigatory authorities with as complete information on an air traffic incident as possible and to enable them to report back, with the least possible delay to the pilot or operator concerned, the result of the investigation of the incident and, if appropriate, the remedial action taken.

5. AIR TRAFFIC INCIDENT REPORT

For use when submitting and receiving reports on air traffic incidents. In an initial report by radio, items with an asterisk (*) should be included.

E - SUPPLEMENTARY INFORMATION BY ATS UNIT CONCERNED

1. Receipt of report

a)	Report received via AFS / radio / Telephone / other (specify) [1].....
b)	Report received by.....(name of ATS unit)

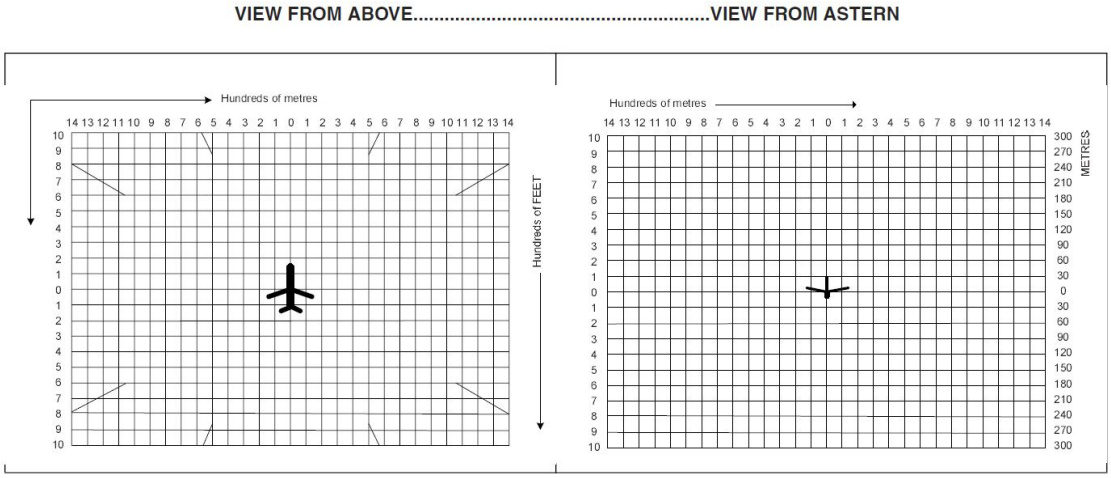
2. Details of ATS action

	Clearance, incident seen (radar / visually, warning given, result of local enquiry, etc.)

[1] Delete as appropriate

6. DIAGRAMS OF AIRPROX

Mark passage of other aircraft relative to you, in plan on the left and in elevation on the right, assuming YOU are at the center of each diagram. Include first sighting and passing distance.



Instructions for the completion of the Air Traffic Incident Report Form

Item	
A	Aircraft identification of the aircraft filing the report.
B	An AIRPROX report should be filed immediately by radio.
C1	Date / time UTC and position in bearing and distance from a navigation aid or in LAT/LONG.
C2	Information regarding aircraft filing the report, tick as necessary.
C2 c)	e. g. FL350 / 1013 hPa or 2500 FT / QNH 1007 hPa or 1200 FT / QFE 998 hPa.
C3	Information regarding the other aircraft involved.
C4	Passing distance - state units used.
C6	Attach additional papers as required. The diagrams may be used to show aircraft's positions.
D1 f)	State name of ATS unit and date time / time in UTC
D1 g)	Date and time in UTC.
E2	Include details of ATS unit such as service provided, radiotelephony frequency, SSR Codes assigned and altimeter setting. Use diagram to show the aircraft's position and attach additional papers as required.

ENR 5 NAVIGATION WARNINGS

ENR 5.1 PROHIBITED, RESTRICTED AND DANGER AREAS

Identification, name and lateral limits	Upper limit / Lower limit	Remarks (time of activity, type of restriction, nature of hazard,risk of interception)
1	2	3
PROHIBITED AREAS		
OO P1 WADI SARIN Area bounded by lines joining successively the following points: N231100 E0584400 - N230800 E0584400 - N231300 E0582400 - N231700 E0583100 - N231100 E0584400	2000 FT AGL / SFC	Wildlife reserve Permanent.
OO P2 HAJAR Circle radius 0.5 NM centred at N233030 E0583000	3500 FT / SFC	High frequency radio transmission Permanent.

Identification, name and lateral limits	Upper limit / Lower limit	Remarks (time of activity, type of restriction, nature of hazard,risk of interception)
1	2	3
RESTRICTED AREAS		
OO R 3 AL MULADDAH Circle radius 3 NM centred at N234100 E0573230	4000 FT / SFC	Parachute descent exercises Permanent. Controlling authority: SOPR, RAFO, TEL: 26875005.
OO R 5 THUMRAIT Circle radius 15 NM centred at	FL 150 / SFC	Permanent. Controlling authority: HQ RAFO, TEL: 24334211.

Identification, name and lateral limits	Upper limit / Lower limit	Remarks (time of activity, type of restriction, nature of hazard,risk of interception)
1	2	3
N174006 E0540118		
OO R 6 SALALAH Area enclosed within Salalah/Arzat road / coastline and E0541000 / E0541300	800 FT / SFC	Permanent. Controlling authority: ATC Salalah, TEL: 23291304.
OO R 7 BARKA Circle radius 2 NM centred at N234240 E0580525	3500 FT / SFC	Government operations PPR. Controlling authority: 'Operations' 131.200 MHz, TEL: 24510111 or 24516211.
OO R 8 SIB Circle radius 0.5 NM centred at N234011 E0581021	3500 FT / SFC	Government operations Same as OO R 7.
OO R 9 MUSCAT Arc of a circle radius 0.5 NM centred at N233700 E0583530 from 090° (True) clockwise to 270° (True)	3500 FT / SFC	Government operations Same as OO R 7. HEL operating at Fort Jalali must approach from and depart towards East.
OO R 10 MAMURAH Circle radius 0.5 NM centred at N170320 E0541410	1400 FT / SFC	Government operations PPR. Controlling authority: 'Operations' 131.200 MHz, TEL: 23290844.
OO R 11 UM AL GHAWARIF Arc of a circle radius 0.5 NM centred at N170120 E0540815 from 085° (True) clockwise to 265° (True)	800 FT / SFC	Government operations Same as OO R 10.
OO R 12 AL HISN Circle radius 0.5 NM centred at N165940 E0540600	1500 FT / SFC	Government operations PPR. Controlling authority: 'Operations' 131.200 MHz, TEL: 23290884.

Identification, name and lateral limits	Upper limit / Lower limit	Remarks (time of activity, type of restriction, nature of hazard,risk of interception)
1	2	3
OO R 14 HAZM Circle radius 3 NM centred at N233400 E0573000	12000 FT / SFC	Parachute descent exercises Permanent. Controlling authority: SOPR, TEL: 26875005.
OO R 15 JAZIRAT AL GHANAM Arc of a circle radius 5 NM centred at N262400 E0562300 from 040° (True) clockwise to 250° (True), and arc of a circle radius 10 NM from 250° (True) clockwise to 040° (True)	FL400 / SFC	Naval firing Permanent. Controlling authority: HQ RNO, TEL: 24338805.
OO R 76 AL ANZAR Circle radius 2 NM centred at N241807 E0564508	2000 FT / SFC	Government operations PPR. Controlling authority: ‘Operations', 131.200 MHz, TEL: 24510111 or 24516211.
OO R 78 SOUTHERN TRAINING AREA Area bounded by lines joining successively the following points: N233215 E0581230 - N233045 E0581600 - N232830 E0581600 - N232830 E0581145 - N233045 E0581115 - N233115 E0581115 - N233215 E0581230	2000 FT / SFC	Low level flying Aircraft Permanent. Controlling authority: HQ RAFO, TEL: 24334211.
OO R 95 MASIRAH WESTERN TRAINING AREA Area bounded by lines joining successively the following points: N211100 E0583900 - N210151E0591024 - N202600 E0591045 - N201725 E0585716 - N203102 E0584235 - N201822 E0582916 - N195736 E0580701 - N194345 E0582141 - N190823 E0580908 - N201407 E0565436 - N211100 E0573144 - N211100 E0583900	UNL / SFC	Military Training Area Permanent. Controlling authority: RAFO Masirah OPS, TEL: 25482341 HQ RAFO, TEL: 24334211

Identification, name and lateral limits	Upper limit / Lower limit	Remarks (time of activity, type of restriction, nature of hazard,risk of interception)
1	2	3
OO R 96 BUR ZAMAN TRAINING AREA Area bounded by lines joining successively the following points: N212300 E0584200 - N212215 E0591830 - N221220 E0584510 - N222903 E0581105 - N220648 E0580745 - N213829 E0575005 - N212300 E0584200	UNL / SFC	Military Training Area Permanent. Controlling authority: HQ RAFO, TEL: 24334211
OO R 97 THAMOOD TRAINING AREA Area bounded by an ARC centre joining successively the following points: N174830 E0541415 - (N175323 E0540833 ARC CENTRE) - N175506 - E0540118 - (N174050 E0534541 ARC CENTRE) - N172940 E0535006. Then bounded by lines joining succesively the following points: N172940 E0535006 - N172238 E0535100- N171108 E0530243 - N185051 E0521730 - N192737 E0535753 - N185938 E0553330 - N181300 E0550500 - N173803 E0542415 - N174830 E0541415	UNL / SFC	Military Training Area Permanent. Controlling authority: RAFO Thumrait OPS, TEL: 23466100 HQ RAFO, TEL: 24334211
OO R 98 RAMLAT SAHMAH TRAINING AREA Area bounded by lines joining successively the following points: N194945 E0555230 - N193110 E0555230 - N191000 E0553900 - N193426 E0541651 - N200500 E0554345 - N200100 E0555230 - N195615 E0555230 - N195615 E0554345 - N194945 E0554345 - N194945 E0555230	UNL / SFC	Military Training Area Notified. Controlling authority: HQ RAFO, TEL: 24334211
OO R 99 SAWQARAH WESTERN TRAINING AREA	UNL / SFC	Military Training Area 0300/1200 UTC SUN through THU Outside these hours will be Notified. Controlling authority: HQ RAFO, TEL: 24334211

Identification, name and lateral limits	Upper limit / Lower limit	Remarks (time of activity, type of restriction, nature of hazard,risk of interception)

ENR 5.2 MILITARY EXERCISE AND TRAINING AREAS AND AIR DEFENCE IDENTIFICATION ZONE (ADIZ)

1. GENERAL

All airspace in which a potential hazard to aircraft operations may exist and all areas over which the operation of civil aircraft may, for any reason, be restricted, either temporarily or permanently, are all enclosed within prohibited, restricted or danger areas. These areas, including their times of activity, are listed in ENR 5.1.

2. SYSTEM AND METHOD OF ACTIVATION

NOTAMs are issued to notify activation of areas which are activated on a non-scheduled basis.

3. REMARKS

Nil

SUHAR TRAINING AREA (Provisional). Area bounded by lines joining the following points: N242819 E0561024 - N241710 E0562552 - N240626 E0563138 - N234532 E0562654 - N235222 E0561100 - N240307 E0560408 - N241448 E0555824 - N241910 E0560433 - N242819 E0561024	7000 FT / SFC PERM Active during HJ VFR Routing to/from Training Area 1. Traffic entering the Training Area from Suhar Aerodrome to enter via VFR Reporting Point COPPER (N24°18’30” E056°25’24”) north of Route 7 not below 3500FT AMSL (weather permitting) 2. Traffic exiting the Training Area to Suhar should exit via OMGRIT (OMAN ABRASIVE PLANT) (N24°17’10” E056°25’52”) and route to the south of Route 7 at or below 2500FT. (weather and terrain permitting)	Conditions of use. 1. The airspace designated as Suhar Training Area is airspace in which extensive local flying and training flights will take place with fixed wing aircraft. 2. The Training Areas are uncontrolled airspaces. It will be the responsibility of all pilots to maintain adequate separation with other aircraft. 3. Pilots are required to maintain a listening watch on TIBA Frequency 122.225 MHz and make regular position reports on the TIBA frequency to ensure adequate traffic deconfliction. 4. Pilots of all aircraft operating within the training area are required to keep a listening watch on the appropriate Muscat Control Frequency. 5. Flight Information Services (FIS) are not provided by Muscat Control within the Training Area.

Name Lateral limits	Upper / lower limits and system / means of activation announcement INFO for CIV FLT	Remarks / Time of ACT / Risk of interception (ADIZ)
1	2	3
		6. All flights in the Training Areas are to be conducted on Muscat Regional QNH. This value can be obtained from Suhar AFIS on 118.725 MHz or Muscat Control on 124.7 MHz. 7. VFR Traffic may transit the training area however should be aware of the possibility of encountering increased numbers of aircraft conducting flight training and not necessarily maintaining an orderly direction or level during flight. 8. Training Flights are to be conducted during DAYLIGHT hours and in VMC ONLY. 9. Flight Training exercises to be conducted within the designated areas and aircraft not to stray out of the areas or intrude into adjacent airspaces as these infringe on the protection areas of Instrument Flight Procedures. 10. Aerobatics flights are prohibited in Training Areas. 11. Traffic experiencing an emergency or requiring navigation assistance may contact Muscat Control on 124.7 MHz Limited radio and surveillance coverage is available from Muscat Control in the Training Area. On receipt of the information from Muscat Control, it shall be the responsibility of the pilot to decide whether his intended flight can be carried out safely in view of the prevailing air traffic. Active: HJ and VMC ONLY.

ENR 5.6 BIRD MIGRATION AND AREAS WITH SENSITIVE FAUNA

1. BIRD MIGRATION

Muscat/Muscat International and Salalah: Large solitary predatory birds (eagles, vultures etc.) present a hazard to air navigation at all times on the coastal plain in the vicinity of these airports. Pilots are advised to exercise extreme caution when approaching or departing, particularly below ALT 3000 FT. ATC will endeavor to keep pilots advised of bird concentrations, but single birds circling at any height are very difficult to observe from ATC. Pilot reports of bird concentrations are requested. These reports are very useful in planning a programme to attempt a reduction of bird strike hazards.

2. AREAS OF SENSITIVE FAUNA

Areas of sensitive fauna are listed in ENR 5.1 as Prohibited areas.

AD 1 AERODROMES/HELIPORTS - INTRODUCTION

AD 1.1 AERODROME/HELIPORT AVAILABILITY AND CONDITIONS OF USE

1. GENERAL CONDITIONS UNDER WHICH AERODROMES/HELIPORTS AND ASSOCIATED FACILITIES ARE AVAILABLE FOR USE

The conditions under which aircraft may land, are parked, housed or otherwise dealt with, at any of the aerodromes under the control of, or operated on behalf of the CAA, in addition to those prescribed in the legislation listed in GEN 1.6, shall be as follows:

a) the fees and charges for the landing, parking or housing of aircraft shall be those published, from time to time, by the Director General of Air Navigation (referred to herein as "the CAA") in either AIP or NOTAM. The fees and charges for any supplies or services which may be furnished to the aircraft, at any aerodrome under the control of the CAA, or the designated Airport Operating Agency, be such reasonable fees and charges as may, from time to time, be determined by the CAA or the designated Airport Operating Agency for that aerodrome. The fees and charges referred to in this paragraph shall accrue from day to day and shall be payable to the CAA or the designated Airport Operating Agency on demand.

b) the CAA shall have a lien on the aircraft, its parts and accessories, for such fees and charges as aforesaid.

c) if payment of such fees and charges is not made to the CAA within fourteen days after a letter demanding payment thereof has been sent by mail to the address of the registered owner of the aircraft, the CAA shall be entitled to sell, remove, destroy or otherwise dispose of the said aircraft and any of its parts and accessories and to apply the proceeds therefrom to the payment of such fees and charges.

d) neither the CAA nor any servant or agent of the government shall be liable for loss of or damage to the aircraft, its parts or accessories or any property contained in the aircraft, howsoever such loss or damage may arise, occurring while the aircraft is on any of the aerodromes under the control of the CAA or the designated Airport Operating Agency or is in the course of landing or taking off at any such aerodromes or of being removed or dealt with elsewhere for the purpose of paragraph c) above of these conditions.

1.1 Landings made elsewhere than at international airports

1.1.1 If a landing is made at other than a designated international airport, the pilot in command shall report the landing, as soon as practicable, to the health, customs and immigration authorities at the international airport at which the landing was scheduled to take place, by the most expeditious means of communication available.

1.1.2 The pilot in command shall be responsible for ensuring that:

a) if pratique has not been granted to the aircraft at the previous landing, contact, between the passengers and crew on one hand and other persons on the other hand, is avoided.

b) no cargo, baggage or mail is removed from the aircraft, except as provided in c) below.

c) no foodstuff of overseas origin, nor any plant material, is removed from the aircraft, except where local food is unobtainable. All food refuse, including peelings, cores, fruit stones, etc. must be collected and returned to the galley refuse container, the contents of which shall not be removed from the aircraft except for hygienic reasons; in which case they shall be destroyed by burning or deep burial.

Paragraphs 1.1.1 and 1.1.2 are hereby notified for the purpose of Article 20 of the Civil Aviation Law.

1.2 Traffic of persons and vehicles on aerodromes

1.2.1 Airport areas

All aerodromes available for public use and under the control of CAA or operated on behalf of the CAA, which lie within legally defined airport areas, details of which are contained in the relevant Aerodrome Manual and Airport Security Plan.

1.2.2 Demarcation of zones

Each airport is divided into two zones:

a) a public zone, to which access is not restricted in any way, and

b) a restricted zone comprising the remainder of the airport area.

1.3 Movement of persons

Only those personnel authorized by the ROP, or the Aerodrome Operator, as applicable and stated in the relevant Aerodrome Manual under and in accordance with those conditions prescribed in the relevant legislation, are permitted access to restricted zones as follows:

Staff of public authorities, airlines and handling agents and other authorized persons in pursuit of their duties shall have access to those portions of a restricted zone as necessary. The customs, police and health offices and the premises assigned to arriving, departing and transit traffic are, in addition, accessible to properly cleared passengers. The movement of personnel having access to a restricted zone is subject to the conditions prescribed in the relevant legislation. This paragraph is hereby notified to the purposes of article 21 (2) of the Civil Aviation Law and relevant Civil Aviation Regulations.

1.4 Movement of vehicles

Only those Vehicles authorized by the ROP, or the Aerodrome Operator, as applicable and stated in the relevant Aerodrome Manual under and according to those conditions prescribed in the relevant legislation, and Aerodrome Manual are permitted access to restricted zones as follows:

a) Access to a restricted zone is prohibited to all vehicles not displaying an Aerodrome Vehicle Permit.

b) All vehicle drivers, regardless of vehicle type, when driving within the confines of an aerodrome, shall respect the direction of traffic, traffic signs and signals, posted speed limits and generally comply with the highway code and relevant Aerodrome Manual. This paragraph is hereby notified to the purposes of article 21 (2) of the Civil Aviation Law and relevant Civil Aviation Regulations.

c) No person shall operate a vehicle on the manoeuvring area (Runway and Taxiways) or Civil Aprons unless they are in possession of a valid air-side driving permit issued by the Aerodrome Operator. A nominal fee may be charged for this permit.

1.5 Policing

While all possible measures have been taken to ensure the security of the airport, the Sultanate of Oman and/or any concessionaire shall not be held responsible for either:

a) the care and protection of aircraft, vehicles, equipment and goods for which the aerodrome facilities are used or

b) any loss or damage, unless such loss or damage is incurred as a result of an action by the Sultanate of Oman or a concessionaire or their respective agents.

1.6 Aerodrome operating minima

1.6.1 Oman determines and publishes aerodrome operating minima as MDH/DH and RVR/Visibility for the following procedures:

- Category II precision approaches with DH greater than or equal to 100 ft;

- Category I precision approaches with DH greater than or equal to 200 ft;

- Approaches with vertical guidance (APV);

- Non precision approaches; and

- Visual manoeuvres.

1.6.2 These minima are published on instrument approach charts. They constitute the lowest operating minima that can be used without an operational approval by the aircraft operator's surveillance authority.

1.6.3 For AFIS aerodromes, Minimum visibility for take-off & landing are included in AD 2.2 section of each aerodrome.

1.6.4 Operators must establish AOM for each aerodrome to be used for operations. After consideration of the factors listed below, operators may determine that their AOM should be higher than the published minima:

a) the type, performance and handling characteristics of the aeroplane;

b) the composition of the flight crew, their competence and experience;

c) the dimensions and characteristics of the runways which may be selected for use;

d) the adequacy and performance of the available visual and non-visual ground aids;

e) the equipment available on the aeroplane for the purpose of navigation and/or control of the flight path, as appropriate, during the take-off, the approach, the flare, the landing, roll-out and the missed approach;

f) the obstacles in the approach, missed approach and the climb-out areas required for the execution of contingency procedures and necessary clearance;

g) the obstacle clearance altitude/height for the instrument approach procedures;

h) the means to determine and report meteorological conditions; and

i) the flight technique to be used during the final approach.

2. APPLICABLE ICAO DOCUMENTS

The standards and recommended practices of the following documents are applied. Differences to the documents listed below are noted in chapter GEN 1.7

3. CIVIL USE OF MILITARY AIR BASES

3.1 General

Civil aircraft are not permitted to land at any aerodrome not listed in this AIP except in cases of a real emergency or where special permission has been granted.

3.2 Submission of application

All requests for use of listed military aerodromes should be made to:

Postal Address: HQ RAFO
P.O. Box 722
POSTAL CODE 111
MUSCAT
Sultanate of Oman
Telephone: (968) 24 334211
Telefax: (968) 24 334776
Telex: 5592 RAFOOMAN ON.

4. CAT II/III OPERATIONS AT AERODROMES

Nil

5. FRICTION MEASUREMENT DEVICE USED AND FRICTION LEVEL BELOW WHICH RWY IS DECLARED SLIPPERY WHEN IT IS WET

5.1 Aerodrome operators are required to conduct periodic surveys of the friction characteristics of their runway surfaces. The purpose of these surveys is to predict the need for maintenance of the runway surface to prevent an unacceptable deterioration of friction as detailed in Table 1. The recognized Continuous Friction Measuring Equipment (CFME) devices in the Sultanate of Oman are the Mu-Meter, Griptester, Surface Friction Tester Vehicle and Runway Friction Tester Vehicle. These surveys start with the new construction of a runway surface at which the friction level is required to equal or exceed the values stated in the table for the Design Objective for New Surface.

5.2 If a survey indicates that the runway surface friction characteristics have deteriorated below the specified Minimum Friction Level (MFL), then that runway will be notified by NOTAM as a runway that ‘may be slippery when wet’.

5.3 When a runway is notified as ‘may be slippery when wet’, aircraft operators may request additional information relating to that notification from the aerodrome operator. However, any performance calculations or adjustment made as a result of this information are the responsibility of the aircraft operator.

Friction Levels						
Continuous Friction Measuring Equipment (CFME)	**Test tire**		**Test Speed (km/h)**	**Test Water depth (mm)**	**Design objective for new surface**	**Minimum Friction Level (MFL)**

AD 1.2 RESCUE AND FIRE FIGHTING SERVICES AND SNOW PLAN

1. RESCUE AND FIRE FIGHTING SERVICES

Adequate rescue and fire fighting vehicles, equipment and personnel have been provided at all certified aerodromes. The scale of protection has been determined in accordance with the standards and recommended practices in chapter 9 of ICAO Annex 14 Volume 1, and the guidance in Attachment A to Annex 14, and is indicated in terms of each certified aerodrome in AD 2. The number of trained personnel available is determined by the Aerodrome Operator in consultation with the CAA. Each rescue and fire fighting unit is operated by the Aerodrome Operator. Full service on a 24 hour basis is normally provided only at Muscat International Airport and Salalah Airport.

AD 1.4 GROUPING OF AERODROMES/HELIPORTS

The criteria applied by the Sultanate of Oman in grouping aerodromes for the provision of information in this AIP are as follows:

1. INTERNATIONAL AERODROME

Aerodromes of entry and departure for international air traffic, where all formalities concerning customs, immigration, health, animal and plant quarantine and similar procedures are carried out and where air traffic services are available on a regular basis.

2. SECONDARY/OTHER INTERNATIONAL AERODROME

Other aerodrome available for entry or departure of international air traffic, at which the formalities of customs, immigration, health and similar procedures and air traffic services are made available on a restricted basis to flights, with prior approval only.

3. NATIONAL AERODROME/HELIPORT

An aerodrome available only for domestic air traffic, including those military aerodromes/heliports where civil air traffic is allowed under certain conditions.

OODQ AD 2.21 NOISE ABATEMENT PROCEDURES

NIL

OODQ AD 2.22 FLIGHT PROCEDURES

22.1 INBOUND

a) Request descent from Muscat ACC.

b) Muscat ACC will provide FIS below FL150 and advise aircraft to report once two way communication established with DUQM Information.

c) Contact MASIRAH RADAR on 121.300 MHz to identify and advise level or altitude passing and seek traffic information.

d) Contact DUQM Information on 118.000 MHz for weather information and provide POB and ETA Duqm before crossing Haima.

e) Advise Muscat ACC that two way communications are established with DUQM Information before changing over but monitor MUSCAT CONTROL on 123.950 MHz on VHF #2.

f) Advise DUQM Information of ETA and request weather.

g) On reporting field in site, DUQM Information will pass wind speed, direction and runway condition and availability.

22.2 OUTBOUND

a) Advise DUQM Information starting and provide runway to be used.

b) Pass POB and fuel endurance to DUQM Information.

c) DUQM Information call ACC Tel.: 24 359015 giving requested flight level by the pilot and require SSR and flight level.

d) Inform DUQM Information on taxi for departure.

e) After take off report off chock time, airborne time, ETA to Muscat and when two way communication is established with MUSCAT CONTROL on 123.950 MHz.

f) Contact MASIRAH RADAR on 121.300 MHz to identify flight, advise altitude and request traffic information.

g) Remain outside controlled airspace until two contact is established with Muscat ACC.

Area Minimum Altitude (AMA)

Example: 2900 feet **29**

Each 1^ quadrilateral contains an area minimum altitude (AMA) which represents the lowest altitude which may be used under instrument metereological conditions (IMC). The AMA provides a minimum clearance of 1000 feet above all obstacles in the quadrilateral. It is represented in thousends and tens of feet above mean sea level.

OOFD AD 2.1 AERODROME LOCATION INDICATOR AND NAME

OOFD FAHUD/Fahud

OOFD AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	222115.88 N 0562905.34 E Midpoint of RWY centreline
2	Direction and distance from (city)	Fahud Airport is located approximately 2.5 KM/1.3 NM north of Fahud Camp in the North of Oman.
3	Elevation/Reference temperature	565 FT/44.7°C
4	Geoid undulation at AD ELEV PSN	-111 FT Height of Geoid (MSL) above reference ellipsoid (WGS-84)
5	MAG VAR/Annual change	2°E (2021)/0.03° E increasing
6	AD Administration, address, telephone, telefax, telex, AFS, Email, website	Address: Oman Airports Management Company S.A.O.C Muscat International Airport P.O.Box 1707 Postal Code 111 Muscat, Sultanate of Oman During working hours: Fahud Airport Manager Office: (968) 24383761 Fahud Airport RFFS Office: (968) 2438 4164 \ 2438 4819 After Working Hours: Fahud Airport Manager Mobile: (968) 99205147 PDO Fire Station commander Mobile: (968) 71110347 Fahud AFIS Specialist Mobile: (968) 91368935 Oman Airports Muscat (HQ): Chief Executive Officer CEO (968) 24250005 \99222244 Chief Operation Officer COO (968) 24353800 \99481801 VP regional Airports (968) 99422350 IMS director (968) 24352231
7	Types of traffic permitted (IFR/VFR)	VFR/IFR only in visual meteorological conditions (VMC). Minimum visibility for take-off & landing: 5000 M. Minimum cloud ceiling: 1500 FT. Aircraft Code C (Wingspan up to but not including 36 M; Outer main gear span up to but not including 9 M). Use restricted to aircraft with a wheelbase of less than 18 M. Only flights operating on behalf of PDO will be allowed to land and depart except by prior permission from the Airport Manager

		or in an aircraft emergency.
8	Remarks	NIL

OOFD AD 2.3 OPERATIONAL HOURS

1	AD Administration	From Sunrise to Sunset - HJ. Approach and/or landing by prior permission only. Minimum of 24 hours notice is required for non-scheduled flights.
2	Customs and immigration	NIL
3	Health and sanitation	NIL
4	AIS Briefing Office	NIL
5	ATS Reporting Office (ARO)	NIL
6	MET Briefing Office	NIL
7	ATS	HJ - Flight Information is operated for scheduled and pre-arranged flights (Day Operation Only).
8	Fuelling	NIL
9	Handling	As AD hours
10	Security	Security and safety services (SSS) 24 hours and ROP security during operation hours.
11	De-icing	NIL
12	Remarks	Esbaar (Drone Flight Survey) operated as AD hours

OOFD AD 2.4 HANDLING SERVICES AND FACILITIES

NIL

OOFD AD 2.5 PASSENGER FACILITIES

1	Hotels	There is accommodation available at the PDO Fahud camp and contractors motel (PAC). Accomodation is available only by prior arrangement.
2	Restaurants	There is a canteen available at the PDO Fahud camp and motel (PAC) at contractor camp. This facility is available only by prior arrangement. Restaurants and coffee shops available located in Fahud area.
3	Transportation	Transportation can be made available by prior arrangement.
4	Medical facilities	There is a Clinic at the PDO Fahud camp. The nearest hospitals are at Nizwa, approx 165 KM/89.1 NM by road and Ibri, approx 145 KM/78.3 NM by road.

5	Bank and Post Office	There are Muscat Bank and Sohar International bank ATM located in Fahud area.
6	Tourist Office	NIL
7	Remarks	Supermarkets are available in Fahud area.

OOFD AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting	Cat 7
2	Rescue equipment	Two 8x8 foam tenders, carries total 20000 LTRS water, 5000 LTRS type ‘FFFP’ foam and 1000 KG dry powder. Additional one 6x6 foam tender carrying 12 500 LTRS water, 1500 LTRS type ‘FFFP’ foam available and 225 KG dry powder. Emergency water supplies available, 50 000 LTRS overhead tank at apron and additional water tanker 20000 LTRS WATER Open source 12 000 LTRS tank at each runway end
3	Capability for removal of disabled aircraft	Limited to GSE on-site and Recovery Kit available in Muscat up to B747 capacity will be arranged as required.
4	Remarks	NIL

OOFD AD 2.7 SEASONAL AVAILABILITY — CLEARING

NIL

OOFD AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

LEGEND

Area Minimum Altitude (AMA)	
Example: 2900 feet	29
Each 1° quadrilateral contains an area minimum altitude (AMA) which represents the lowest altitude which may be used under instrument flight rules (IFR) in that area. The AMA provides a minimum clearance of 1000 feet above all obstacles in the quadrilateral. It is represented in thousands and tens of feet above mean sea level.	
Elevation / Obstacle	588'

OOGB AD 2.1 AERODROME LOCATION INDICATOR AND NAME

OOGB QARN ALAM/Qarn Alam

OOGB AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	212237.05 N 0570323.49 E Midpoint of RWY centreline
2	Direction and distance from (city)	Qarn Alam Airport is located approximately 6.5 KM/3.5 NM northnorth- west of Qarn Alam Camp in the North of Oman.
3	Elevation/Reference temperature	442 FT/44.2°C
4	Geoid undulation at AD ELEV PSN	-109 FT Height of Geoid (MSL) above reference ellipsoid (WGS-84)
5	MAG VAR/Annual change	1°E (2020)/0.05° increasing
6	AD Administration, address, telephone, telefax, telex, AFS, Email, website	Qarn Alam Airport Oman Airports Management Company S.A.O.C. P.O. Box 1707 Postal Code 111 Muscat Sultanate of Oman Tel.: (968) 24 350000 Fax: (968) 24 250003 During working hours: Qarn Alam Airport Manager Mobile: (968) 90 623738 Office: (968) 24 385672 / 385938 Operations and Fire: Mobile: (968) 90 178194 After Working hours: Mobile: (968) 90 623738 Oman Airports Muscat (HQ): Tel. (Office): (968) 24 352400/ 52414/ 52435
7	Types of traffic permitted (IFR/VFR)	VFR/IFR only in visual meteorological conditions (VMC). Minimum visibility for take-off & landing: 5000 M. Minimum cloud ceiling: 1500 FT. Aircraft Code C (Wingspan up to but not including 36 M; Outer main gear span up to but not including 9 M.) Use restricted to aircraft with a wheelbase of less than 18 M. Only flights operating on behalf of PDO will be allowed to land and depart except by prior permission from the Airport Manager or in an aircraft emergency. Night-time flights will only be permitted with prior permission from the Airport Manager based on CAA approval.

8	Remarks	NIL

OOGB AD 2.3 OPERATIONAL HOURS

1	AD Administration	From Sunrise to Sunset - HJ. Approach and/or landing by prior permission only. Minimum of 24 hours notice is required for non-scheduled flights.
2	Customs and immigration	NIL
3	Health and sanitation	NIL
4	AIS Briefing Office	NIL
5	ATS Reporting Office (ARO)	NIL
6	MET Briefing Office	NIL
7	ATS	HJ - Flight Information is operated for scheduled and pre-arranged flights.
8	Fuelling	NIL
9	Handling	As AD hours
10	Security	SSS security 24 hours and ROP security during operation hours.
11	De-icing	NIL
12	Remarks	NIL

OOGB AD 2.4 HANDLING SERVICES AND FACILITIES

NIL

OOGB AD 2.5 PASSENGER FACILITIES

1	Hotels	There is accommodation available at the PDO Qarn Alam camp and contractors motel (PAC). Accomodation is available only by prior arrangement. Al Tawoos PAC 8 KM/4.3 NM from aerodrome.
2	Restaurants	There is a canteen available at the PDO Qarn Alam camp and motel (PAC) at contractor camp. This facility is available only by prior arrangement.
3	Transportation	p Transportation can be made available by prior arrangement. Luxury buses.
4	Medical facilities	There is a Clinic at the PDO Qarn Alam camp. The nearest hospitals are at Adam, approx 150 KM/81 NM away by road and Nizwa, approx 200 KM/108 NM by road.
5	Bank and Post Office	Bank Muscat at Al Tawoos PAC.
6	Tourist Office	NIL
7	Remarks	NIL

OOGB AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting	CAT 7 RFFS cover available at the airport 1 hour prior scheduled flight arrival. Cover for non-scheduled flights is available by prior arrangement.
2	Rescue equipment	Two 8x8 foam tenders carry total 20,000L water, 5000L type FFFP foam, 1000KG dry powder and fully equipped with rescue equipment in accordance with regulation. Emergency water supplies available: 20,000L water tanker and 12,000L underground tanks at each runway end
3	Capability for removal of disabled aircraft	Limited to GHSE on-site and Recovery Kit available in Muscat up to B747 capacity will be arranged as required.
4	Remarks	NIL

OOGB AD 2.7 SEASONAL AVAILABILITY — CLEARING

NIL

OOGB AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	Apron	Surface: Strength:	Asphalt (flexible pavement) PCN 140/F/A/W/T
2	Taxiway width, surface and strength	A,B	Width: Surface: Strength:	15 M Asphalt (flexible pavement) PCN 140/F/A/W/T
3	ACL and elevation	Apron area; 435 FT AMSL		
4	VOR checkpoint	NIL		
5	INS checkpoint	NIL		
6	Remarks	NIL		

OOGB AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Painted aircraft stand markings Yellow painted centrelines No visual docking system
2	RWY and TWY markings and LGT	RWY: LGT: See AD 2.14 for details Markings: Runway designation markings, painted centreline, threshold markings, touchdown zone markings, painted edge markings TWY: Markings: Edge lighting, painted centreline, Runway holding position markings Apron: Markings: Edge lighting, painted centreline, aircraft stop markings Signage: Markings: Apron directional illuminated Runway hold position markings, runway exit signs
3	Stop bars	NIL

4	Other runway protection measures	NIL
5	Remarks	Aiming Point marking does not coincide with PAPI slope origin.

LEGEND

Area Minimum Altitude (AMA)

Example: 2900 feet **29**

Each 1° quadrilateral contains an area minimum altitude (AMA) which represents the lowest altitude which may be used under instrument meteorological conditions (IMC). The AMA provides a minimum clearance of 1000 feet above all obstacles in the quadrilateral. It is represented in thousands and tens of feet above mean sea level.

LEGEND

Area Minimum Altitude (AMA)

Example: 2900 feet **29**

Each 1° quadrilateral contains an area minimum altitude (AMA) which represents the lowest altitude which may be used under instrument meteorological conditions (IMC). The AMA provides a minimum clearance of 1000 feet above all obstacles in the quadrilateral. It is represented in thousands and tens of feet above mean sea level.

7	Remarks	Non instrument, visual conditions, Daytime only. Max Helicopter length 23.2 M (see Notes and refer to paragraph 20.4, 20.8, 22.4).	Non instrument, visual conditions,Daytime only. Max Helicopter length 23.2 M

Notes: 1. During VFR operations, helicopters of 23.2 meters overall length or less may be directed to land and depart from designated area on Taxiway A. Helicopters longer than 23.2 meters will be treated as fixed wing aircraft and will use the runway, as appropriate.

2. Helicopters longer than 23.2 meters shall advise Aerodrome Control on first contact.

3. The final approach take off area combined with touchdown and lift off area on Taxiway A is marked as shown on the Aerodrome Chart AD 2.OOMS-15. It is designated as FATO ALFA ROMEO 2.

4. Helicopter final approach take-off area ALFA ROMEO 2 can be used for arrivals and departures in both directions - 085° T and 265° T.

5. Aerodrome Control will endeavour to use the helicopter landing areas nearest to the appropriate apron whenever possible, subject to traffic.

6. Helicopters are considered as taxiing aircraft when either on the taxiway or when air taxiing in ground effect and at a speed of 20 KT or less.

7. When meteorological conditions go below following parameters:

a) Visibility less than 5000 M

b) Ceiling unable to remain more than 1000 FT below cloud

c) Forward visibility of 1500 M and during hrs of darkness, all helicopter operations shall take place to and from the runway.

8. FATO HOTEL is available when TWY H is clear of movement, if there is any operations commenced in the compass pad the approach of FATO HOTEL shall be commenced from East (RWYs 26 direction landing).

OOMS AD 2.20 LOCAL AERODROME REGULATIONS

20.1 AERODROME REGULATIONS

General:

AD is restricted to aircraft capable of maintaining twoway radio communications with ATC Muscat.

Local flying restrictions:

a) Non-scheduled and private flights PPR 72 hrs.

b) Traffic circuits Rwy 26R - RIGHT, Rwy 08L - LEFT

c) Pilots intending to conduct local flights are required to obtain prior permission from CAA.

Movement areas - Aprons:

Civil Apron handling requirements:

Operators are responsible for ensuring that aircraft which park on the Civil Apron are provided with:

a) Chocks under wheels.

Wheel chocks are available from handling companies. Fire cover may be provided by the operator, handling company or

Airport Fire Department. If the services of the Airport Fire Department are required, the operator should notify the duty officer (Tel.: (968) 24 519718) at least 10 Minutes prior to start-up.Wearing high visibility jacket is required in the apron area.

20.2 TAXIING TO AND FROM STANDS

See Aerodrome and Parking Chart - ICAO

20.3 PARKING AREA FOR SMALL AIRCRAFT (GENERAL AVIATION)

Stands are allocated by OAMC and information is relayed to Aircraft by ATC.
See Aerodrome and Parking Chart - ICAO

20.4 PARKING AREA FOR HELICOPTERS

Helicopters are treated as fixed-wing aircraft.

20.5 APRON - TAXIING DURING WINTER CONDITIONS

Not applicable.

20.6 TAXIING LIMITATIONS

Ground movement of large aircraft:

All Boeing 777X aircraft operating at OOMS must adhere to the following procedure for wing tip folding:

• Wing tips must remain extended during the landing roll and while vacating the RWY;
• Wing tips are only to be folded once the aircraft has fully vacated the RWY.

20.7 SCHOOL AND TRAINING FLIGHTS - TECHNICAL TEST FLIGHTS - USE OF RUNWAYS

No instrument training flights allowed daily between 0300 - 0900 for CAT A and B.

20.8 HELICOPTER TRAFFIC - LIMITATION

Nil

20.9 REMOVAL OF DISABLED AIRCRAFT FROM RUNWAYS

Refer to section 6 subsection 3

OOMS AD 2.21 NOISE ABATEMENT PROCEDURES

21.1 OPERATORS PROCEDURES

21.1.1 To reduce aircraft noise disturbance to residents around the airport without compromising the safety of aircraft operations, it is recommended that aircraft avoid exceeding idle reverse thrust when using engine reverse upon landing on RWY 08L between 1600 and 0200 UTC.

21.1.2 Unless it is necessary for operational or safety reasons, when using engine reverse, arrivals on RWY 08L between 1600 and 0200 UTC may not exceed idle reverse thrust.

OOMS AD 2.22 FLIGHT PROCEDURES

22.1 SPECIAL PROCEDURES FOR MUSCAT CTR

The arrival, departure and transit routes shown on AD 2.OOMS-87 are mandatory to all VFR flights unless otherwise instructed by ATC.

22.2 RADAR SERVICES AND PROCEDURES

Aircraft will be vectored and sequenced to the appropriate final approach track (ILS, VOR, visual) so as to ensure an expeditious flow of traffic. Radar vectors and flight levels / altitudes will be issued, as required, for spacing and separating the aircraft so that correct landing intervals are maintained, taking into account various factors including aircraft characteristics.

Radar coverage - Muscat APP operates:

RAD at Muscat International Airport - Range 100 NM

Note: Pilots should operate SSR transponder equipment as follows:

a) Operation of transponders on apron areas is not permitted, except with ATC approval.

b) Departing acft shall squawk standby until take-off clearance is received.

c) All departure traffic from OOMS (Muscat International Airport) shall switch on ADS-B before startup.

d) all landing traffic (OOMS) shall keep ADS-B switched on till block-in acft stand

22.3 RADIO COMMUNICATION FAILURE PROCEDURE

22.3.1 At or above 9000 FT QNH:

a) If in VMC, continue flight in VMC;

b) If in IMC, proceed direct to Muscat DVOR/DME at last assigned level and comply with ICAO procedure referenced in ENR 1.6. If unable to land, climb in DVOR/DME holding pattern and depart controlled airspace at applicable minimum en-route level, proceed to alternate.

22.3.2 Below 9000 FT QNH:

with ICAO procedure referenced in ENR 1.6. If unable to land, climb in the DVOR/DME holding pattern and depart controlled airspace at applicable minimum en-route level, proceed to alternate.

Note: Due to terrain South of RWY 08L/26R extended centerline, pilots must monitor position on DVOR/DME or LOC when on intercepting heading. Pilots must ensure that they do not proceed through the extended centreline unless positively instructed to by ATC.

22.4 HELICOPTER PROCEDURE

Helicopters will be directed from the VFR routes to the appropriate landing area.

OOMS AD 2.23 ADDITIONAL INFORMATION

23.1 BIRD CONCENTRATION IN THE VICINITY OF THE AIRPORT

Large solitary predatory birds (eagles, vultures etc.) present a hazard to air navigation at all times on the coastal plain near the vicinity of the airport. Pilots are advised to exercise extreme caution when approaching or departing, particularly below 3000 FT QNH. ATC will endeavor to keep pilots advised of bird concentrations, but single birds circling at any height are very difficult to observe by ATC. Pilot reports of bird concentrations are requested. These reports are very useful in planning a programme to attempt a reduction of bird strike hazards.

23.2 GENERAL SAFETY MEASURES FOR VISUAL DOCKING GUIDANCE SYSTEM (VDGS) OPERATIONS

23.2.1 The VDGS has a built-in error detection program to inform the aircraft pilot of impending dangers during the docking procedures.

23.2.2 If the pilot is unsure of the information being shown on the VDGS display unit, pilot must immediately stop the aircraft and obtain further information for clearance.

23.2.3 The pilot shall not enter the stand area, unless the docking system first is showing vertical running arrows. The pilot must not proceed beyond the bridge, unless these arrows have been superseded by the closing rate bar.

23.2.4 The pilot shall not enter the stand area, unless the aircraft type displayed is equal to approaching aircraft.

23.2.5 When using the docking system, pilots are advised to taxi into the aircraft stand at minimum speed. The system will display “SLOW DOWN” to inform the pilot if the aircraft’s taxiing speed is too fast.

23.2.6 To avoid overshooting, pilots are advised to approach the stop position slowly and observe the closing rate information displayed. Pilots should stop the aircraft immediately when seeing the “STOP” display or when given the “STOP” sign by the aircraft marshaller.

23.2.7 The FAILED MESSAGE - The message FAILED means that docking has been interrupted and has to be resumed only by manual guidance. Do not try to resume docking without manual guidance.

23.3 VDGS-STANDS DOCKING PROCEDURE IN NORTH APRON

Do not enter the stand if the display is blank or shows WAIT, STOP, FAILED, ERR or an incorrect aircraft, unless a

marshaller is present. Contact GROUND for assistance. During the aircraft approach to the stand, the docking guidance system automatically confirms the identification of the aircraft. The aircraft must be identified at least 12m before the correct stop position. If this does not occur, the system displays “STOP” and then “WAIT”. While the aircraft is stopped, the system will attempt to identify it. If successful, the docking procedure will continue. If not, “WAIT” will be replaced with “STOP”.

Check that the correct aircraft type is displayed. The scrolling arrows indicate that the system is activated.

Follow the lead in line. When the solid yellow closing rate field appears, the aircraft has been caught by the scanning unit. The scanning unit now checks that the aircraft is the correct type and the display provides azimuth guidance information.

Look for the flashing red arrow and solid yellow arrow which provide azimuth guidance information. The flashing red arrow shows which direction to steer, while solid yellow arrow gives an indication of how far the aircraft is off of the centreline.

When the aircraft is 12M from the stop position, closing rate information is given. "Distance to go" is indicated by turning off one row of LEDs for each one half metre that the aircraft advances toward the stop position.

When the aircraft is approaching with too high speed, display will indicate "SLOW".

When the correct stop position is reached all of the LEDs for the closing rate field will be off, the word "STOP" will appear in the display.

If the aircraft stops in the correct position, "OK" will be displayed after a few seconds.

If the aircraft has gone past the correct stop position, the display will show "TOO FAR".

23.4 LASER BEAM EMISSION

Laser light pointing Northwest will be operating at N233750 E0581152 (AL KHUDH) from SFC to 500ft AMSL daily between 1300-1700.

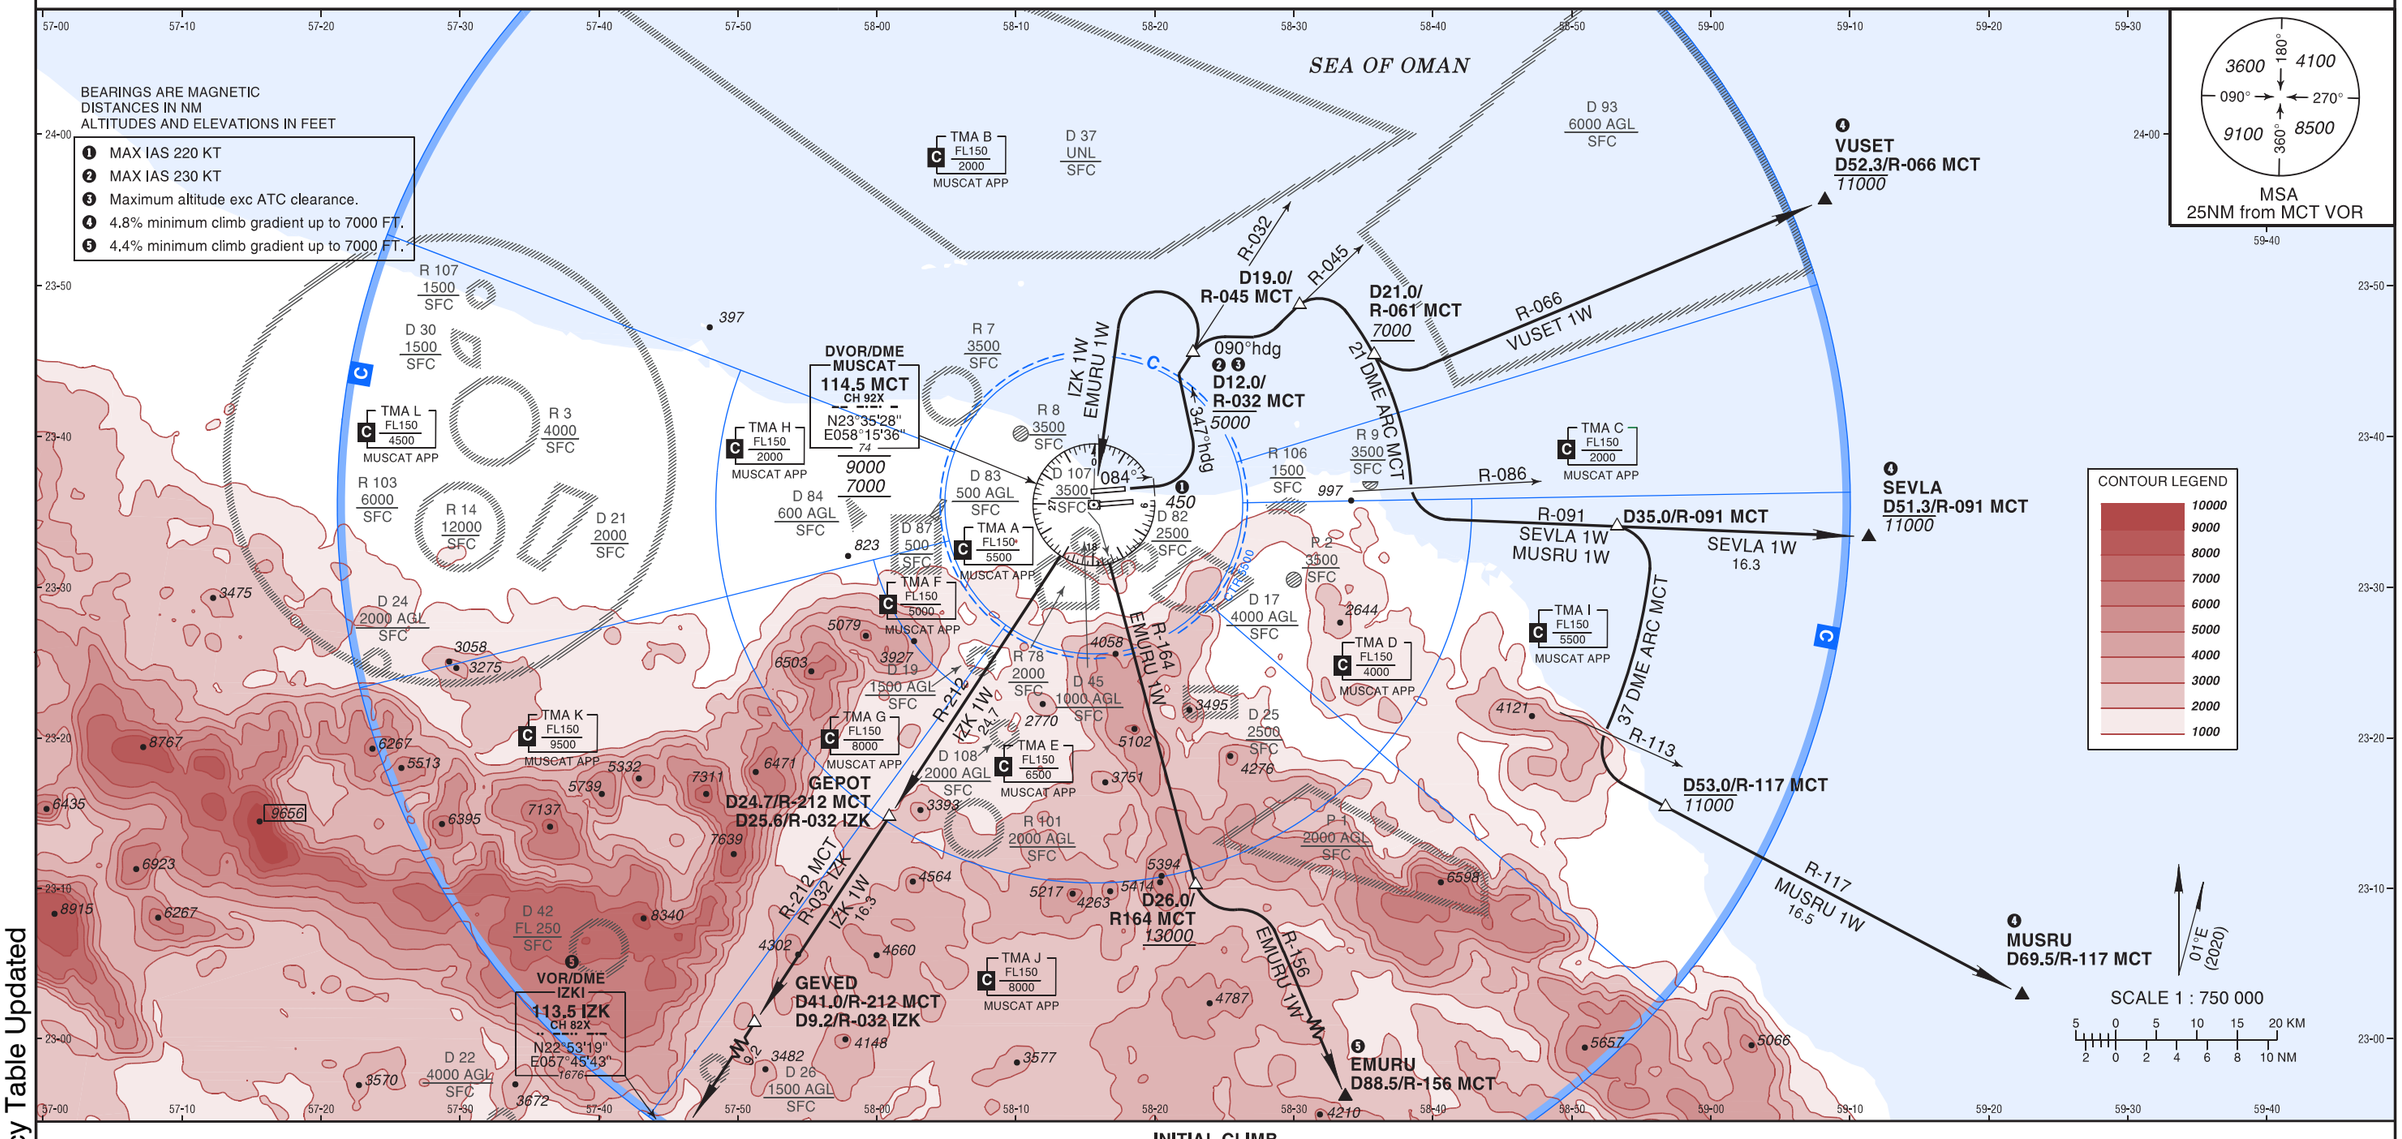
VUSET 1W, SEVLA 1W, MUSRU 1W, EMURU 1W, IZK 1W DEPARTURE



INITIAL CLIMB

Climb on runway heading to reach 450. Turn LEFT on heading 347° to intercept and follow R-032 MCT to D12.0 MCT at or below 5000 exc ATC clearance.

SID	ROUTING
VUSET 1W	Turn RIGHT on heading 090° to intercept and follow R-045 MCT to D19.0 MCT. Turn RIGHT to follow 21 DME ARC MCT to D21.0/R-061 MCT at or above 7000. Turn LEFT to follow R-066 MCT direct to VUSET at or below 11000.
SEVLA 1W	Turn RIGHT on heading 090° to intercept and follow R-045 MCT to D19.0 MCT. Turn RIGHT to follow 21 DME ARC MCT to R-086 MCT. Turn LEFT to follow R-091 MCT direct to SEVLA at or below 11000.
MUSRU 1W	Turn RIGHT on heading 090° to intercept and follow R-045 MCT to D19.0 MCT. Turn RIGHT to follow 21 DME ARC MCT to R-086 MCT at or above 7000 at R-061 MCT. Turn LEFT to follow R-091 MCT to D35.0 MCT. Turn RIGHT to follow 37 DME ARC MCT to R-113 MCT. Turn LEFT to intercept and follow R-117 MCT to D53.0 MCT at or below 11000 direct to MUSRU.
EMURU 1W	Turn LEFT direct to MCT DVOR/DME between 7000 and 9000. Follow R-164 MCT to D26.0 MCT at or above 13000. Turn LEFT to intercept and follow R-156 MCT direct to EMURU.
IZK 1W	Turn LEFT direct MCT DVOR/DME between 7000 and 9000. Follow R-212 MCT direct to GEPOT. Follow R-212 MCT (R-032 IZK) direct to GEVED. Follow R-212 MCT (R-032 IZK) direct IZK VOR/DME.

MUSCAT CONTROL ZONE

NORTHWEST

Arrivals RWY 08L

VFR traffic arriving landing direction 08L from northwest shall maintain 1500 FT and route via the coastline to Holding Point VICTOR ONE N233816 E0581506 (Al Hail Beach). With ATC clearance proceed to remain west of threshold RWY 08L to point OSCAR ONE (End of threshold RWY 08L) to land or as instructed by Muscat TWR.

Departure RWY 08L

VFR traffic to the northwest, subject to ATC clearance shall climb to 1500 FT and proceed on taxiway/runway heading to point UNIFORM ONE (end of threshold RWY 26R) to remain east of threshold RWY 26R to follow November 18 ST dual carriage way to point VICTOR ONE N233816 E0581506 (Al Hail Beach). Then proceed along the coastline to zone boundary or as instructed by Muscat Approach.

Arrivals RWY 26R

VFR traffic arriving for landing direction 26R from northwest shall maintain 1500 FT and route via coastline to holding point VICTOR ONE N233816 E0581506 (Al Hail Beach). With ATC clearance enter the circuit or proceed to remain east of threshold RWY 26R (helicopters) to point UNIFORM ONE (End of threshold RWY 26R) to land or as instructed by Muscat TWR.

Departure RWY 26R

VFR traffic to the northwest, subject ATC clearance shall climb to 1500 FT and proceed on taxiway/runway heading to point OSCAR ONE (End of threshold RWY 08L) to remain west of threshold RWY 08L to point VICTOR ONE N233816 E0581506 (Al Hail Beach). Then proceed to remain west of the dual carriage way via coastal departure or as instructed by Muscat Approach.

VFR DEPARTURE ROUTES

Bausher

Point Romeo (N23 34.0 E058 17.8) Reservoir
091° mag to
Point Sierra (N23 33.8 E058 23.3) Stadium
065° mag to
10 DME MCT (N23 35.0 E058 26.3).
Not above 2000 FT AMSL unless otherwise cleared by ATC.

Cement Plant East

Point Romeo (N23 34.0 E058 17.8) Reservoir
195° mag to
Cement Plant (N23 29.1 E058 16.8)
115° mag to
10 DME MCT (N23 27.0 E058 21.2).
Not above 2000 FT AMSL unless otherwise cleared by ATC.

Cement Plant West

Point Romeo (N23 34.0 E058 17.8) Reservoir
195° mag to
Cement Plant (N23 29.1 E058 16.8)
235° mag to
10 DME MCT (N23 26.0 E058 11.5).
Not above 2000 FT AMSL unless otherwise cleared by ATC.

Fanja

Point Mike (N23 33.5 E058 15.5) Eastern MAM Water Tank, 250° mag to
Point Juliette (N23 32.2 E058 11.4) Al Jafnayn Fort
229° mag to
10 DME MCT (N23 29.0 E058 07.6).
Not above 2000 FT AMSL unless otherwise cleared by ATC.

Nakhl

Point Mike (N23 33.5 E058 15.5) Eastern MAM Water Tank, 250° mag to
Point Juliette (N23 32.2 E058 11.4) Al Jafnayn Fort
229° mag to
Turning Point, TP (N23 32.0 E058 10.0)
270° mag to
10 DME MCT (N23 32.0 E058 05.1).
Not above 2000 FT AMSL unless otherwise cleared by ATC.

Note: VFR arrivals may fly the reverse of the above routes.

TACTICAL JET APPROACHES

MAM Approach RWY 08L

Route direct to BidBid at 3500 FT. From BidBid, with ATC clearance, route direct to 5 DME initial, for runway in use, not below 2500 FT until west abeam Pipe Plant then descend not below 1500 FT for run and break.

LANSAB Approach RWY 26R

Route direct to BidBid at 3500 FT. From BidBid with ATC clearance, route to Lansab at 3500 FT. At Lansab turn left for 7 DME initial, for runway in use, not below 2500 FT until north of Bausher Stadium then descend not below 1500 FT for run and break.

SEEB VILLAGE Approach RWY 08L

Route direct to Hotel at 2500 FT. From Hotel with ATC clearance route direct to 5 DME initial, for runway in use, not below 2000 FT until crossing Seeb/Suhar road, then descend not below 1500 FT for run and break.

DESAL Approach RWY 26R

Route to Hotel at 2500 FT. From Hotel with ATC clearance, route direct for 7 DME initial, for runway in use, not below 2000 FT until intersect extended runway centreline, then descend not below 1500 FT for run and break.

Note 1: Tactical Jet aircraft may be held at BidBid at 3500 FT or Point Hotel at 2500 FT right hand pattern until ATC Approach clearance is available.

Note 2: These approaches are separated from Bausher to Nakhl routes.

Note 3: Unless holding, tactical jets will fly at speeds up to 450 KT.

OOMX AD 2.1 AERODROME LOCATION INDICATOR AND NAME

OOMX MARMUL/Marmul

OOMX AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	180822.15 N 0551043.24 E Midpoint of RWY centreline
2	Direction and distance from (city)	Marmul Airport is located approximately 7 KM west-south-west of Marmul Camp in the Southern Oman.
3	Elevation/Reference temperature	915 FT/42.7°C
4	Geoid undulation at AD ELEV PSN	-114 FT Height of Geoid above reference ellipsoid (WGS-84)
5	MAG VAR/Annual change	1°E (2020)/0.05° increasing
6	AD Administration, address, telephone, telefax, telex, AFS, Email, website	Marmul Airport Oman Airports Management Company S.A.O.C. P.O. Box 1707 Postal Code 111 Muscat Sultanate of Oman Tel.: (968) 24 350000 Fax: (968) 24 250003 During working hours: Airport Manager Mobile: (968) 93 850484 Office: (968) 24670828 Aerodrome Flight Information Service Specialist Tel. 7	Types of traffic permitted (IFR/VFR)	IFR/VFR only in visual meteorological conditions (VMC). Minimum visibility for take-off & landing: 5000 M. Minimum

		cloud ceiling: 1500 FT. Aircraft Code C (Wingspan up to but not including 36 M; Outer main gear span up to but not including 9 M). Use restricted to aircraft with a wheelbase of less than 18 M. Only flights operating on behalf of PDO will be allowed to land and depart except by prior permission from the Airport Manager or in an aircraft emergency. Night time flights will only be permitted with prior permission from the Airport Manager based on CAA approval.
8	Remarks	NIL

OOMX AD 2.3 OPERATIONAL HOURS

1	AD Administration	From Sunrise to Sunset - HJ. Approach and/or landing by prior permission only. Minimum of 24 hours notice is required for non-scheduled flights.
2	Customs and immigration	NIL
3	Health and sanitation	NIL
4	AIS Briefing Office	NIL
5	ATS Reporting Office (ARO)	NIL
6	MET Briefing Office	NIL
7	ATS	HJ - Flight Information is operated for scheduled and pre-arranged flights.
8	Fuelling	As per AD hours
9	Handling	As per AD hours
10	Security	SSS security 24 hours and ROP security during operation hours

11	De-icing	NIL
12	Remarks	PDO. PPR.

OOMX AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo-handling facilities	NIL
2	Fuel/oil types	JET A-1
3	Fuelling facilities/capacity	Hydrant distribution system Fixed storage capacity 100 000 LTRS
4	De-icing facilities	NIL
5	Hangar space for visiting aircraft	NIL
6	Repair facilities for visiting aircraft	NIL
7	Remarks	NIL

OOMX AD 2.5 PASSENGER FACILITIES

1	Hotels	There is accommodation available at the PDO Marmul camp and contractors motel (PAC). Accommodation is available only by prior arrangement.
2	Restaurants	There is a canteen available at the PDO Marmul camp and motel (PAC) at contractor camp. This facility is available only by prior arrangement.
3	Transportation	Transportation can be made available by prior arrangement.
4	Medical facilities	Clinics available in Marmul. There is a clinic at the PDO Marmul camp. The nearest hospitals are at Salalah approximately 240 KM/130

		NM away by road. Haima Hospital approximately 290 KM/157 NM by road.
5	Bank and Post Office	There is Bank Muscat available at Marmul contractors camp and Sohar International Bank located at PDO camp main entrance gate.
6	Tourist Office	NIL
7	Remarks	NIL

OOMX AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting	CAT 7 RFFS cover is available for scheduled movements. Cover for non-scheduled flights is available by prior arrangement.
2	Rescue equipment	Two 8×8 Foam Tenders (Tigon) Each tender carries 10,000 L water, 2500 L Foam and 500 Kg dry powder. Monitor discharge rate 15000 LTRS/MIN One 6×6 foam tender (Rosenbauer) carries 12,500 L water, 1,500 L foam and 225Kg dry powder. Monitor discharge rate 6000 LTRS/MIN. One 4×4 Foam tender (Rosenbauer) carries 6,000 L water, 500 L foam and 135 Kg dry powder Emergency water supplies available 12,000 LTRS tank at each RWY end.
3	Capability for removal of disabled aircraft	Limited to GHSE on-site and Recovery Kit available in Muscat up to B747 capacity will be arranged as required.
4	Remarks	NIL

OOMX AD 2.7 SEASONAL AVAILABILITY — CLEARING

NIL

OOMX AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

LEGEND

Area Minimum Altitude (AMA)	
Example: 2900 feet	29
Each 1° quadrilateral contains an area minimum altitude (AMA) which represents the lowest altitude which may be used under instrument meteorological conditions (IMC). The AMA provides a minimum clearance of 1000 feet above all obstacles in the quadrilateral. It is represented in thousands and tens of feet above mean sea level.	
Elevation Obstacle	588'

7	Types of traffic permitted (IFR/VFR)	IFR/VFR
8	Remarks	AD limited to operate above RVR 550M due to no LVP in force.

OOSA AD 2.3 OPERATIONAL HOURS

1	AD Administration	0330 - 1130 (Sun - Thu) Duty officer available outside these hours
2	Customs and immigration	H24
3	Health and sanitation	Available for scheduled and approved non-scheduled flights.
4	AIS Briefing Office	H24
5	ATS Reporting Office (ARO)	H24
6	MET Briefing Office	H24
7	ATS	H24
8	Fuelling	H24
9	Handling	H24
10	Security	H24
11	De-icing	NIL
12	Remarks	NIL

OOSA AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo-handling facilities	Low deck loading capacity of 7 tons with a lifting height of 3.7 M Main deck loading capacity of 7 tons with a lifting height of 5.6 M Main deck loading capacity of 35 tons with a lifting height of 5.6 M
2	Fuel/oil types	JET A1/Nil
3	Fuelling facilities/capacity	Total tanks capacity: JET A1/300 000 LTRS Fuel hydrant system available on aircraft stands in the Northern

		Aprons.
4	De-icing facilities	NIL
5	Hangar space for visiting aircraft	NIL
6	Repair facilities for visiting aircraft	NIL
7	Remarks	NIL

OOSA AD 2.5 PASSENGER FACILITIES

1	Hotels	Unlimited in the city
2	Restaurants	Airport restaurant
3	Transportation	Taxis, Car rentals
4	Medical facilities	Airport clinic Hospital 10 KM from airport
5	Bank and Post Office	Dhofar Bank, ATM NBO Bank, ATM Exchange money
6	Tourist Office	Available
7	Remarks	NIL

OOSA AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting	CAT 9. CAT 10 available on request
2	Rescue equipment	1 unit 8x8 fire vehicle 16 800 LTRS capacity water 7000 LTRS/MIN discharge 2200 LTRS AFFF 6% foam 3 units 6x6 fire vehicle 12 500 LTRS capacity water 6000 LTRS/MIN discharge 1500 LTRS AFFF 6% foam 1 unit water tanker 25 000 LTRS water
3	Capability for removal of disabled aircraft	Specialized equipment available in Muscat (747-400 one side) basic recovery jack- 65 tons available in Salalah can handle up to code E aircraft with availability of aircraft spare tire
4	Remarks	Direct communication available with rescue and firefighting on frequency 121.600 MHz in cases of emergency.

OOSA AD 2.7 SEASONAL AVAILABILITY — CLEARING

1	Types of clearing equipment	NIL
2	Clearance priorities	NIL

3	Remarks	AD available all seasons

OOSA AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS/POSITIONS DATA

1	Apron surface and strength	a. Civil Apron South:	Surface: Strength:	Asphalt and concrete PCN 60/F/A/X/U (asphalt) PCN 56/R/A/W/U (concrete)
		b. Civil Apron North:	Surface: Strength:	Concrete PCN 77/R/A/W/T (concrete)
		c. Cargo Apron:	Surface: Strength:	Concrete PCN 84/R/A/W/T
2	Taxiway width, surface and strength	G, H2, H3, H7, H8, J & K:	Width: Surface: Strength:	25 M Asphalt 69/F/A/X/T
		A1, A2, B3, B4, B5, B6, C, D1, D2, D7, D8, E2, E7 & E8:	Width: Surface: Strength:	25 M Asphalt 98/F/A/W/T
		Rapid Exit Taxiways D3 & D6:	Width: Surface: Strength: Restrictions:	25 M Asphalt 98/F/A/W/T Runway exit only
3	ACL and elevation	TWY H2 68 FT TWY H3 74 FT TWY H7 74 FT TWY H8 75 FT		TWY B3 93 FT TWY B4 93 FT TWY B5 93 FT TWY B6 93 FT
4	VOR checkpoint	NIL		
5	INS checkpoint	Refer to Aircraft Parking/Docking Chart - ICAO		
6	Remarks	NIL		

OOSA AD 2.9 SURFACE MOVEMENT GUIDANCE AND CONTROL SYSTEM AND MARKINGS

1	Use of aircraft stand ID signs, TWY guide lines and visual docking/parking guidance system of aircraft stands	Taxiing guidance system: a. Cockpit guidelines on taxiway and aprons b. Apron surface Stand ID markings c. Directional marking reflecting the signage on ground d. Supplementary stands are marked by broken centrelines e. Marshallers guidance for South Apron, Cargo Apron, stands 10, 10R, 10L, 15L, 15 &15R

		Visual Docking Guidance System (VDGS) is installed and operational on North Apron except for stands 10, 10R, 10L, 15L, 15 & 15R. For information on Visual Docking Guidance System (VDGS) see OOSA AD 2.23.2.
2	RWY and TWY markings and LGT	RWY 07/25: LGT: Centreline, Edge, End-inset, THR-inset, TDZ, WBAR Markings: THR, RWY designators, TDZ, Centreline, Side stripes Aiming point TWY: LGT: A1, A2, B3, B4, B5, B6, C, D1, D2, D3, D6, D7, D8, E2, E7, E8, G, H2, H3, H7, H8, J & K RETIL: D3 & D6 Edge lights elevated blue LIM Illuminated signs for TWY designators and direction signs Markings: Centreline, Edge, Runway holding positions (All taxiways) Intermediate holding positions: B3, B4, B5, B6, C1, C2, C3 & C4, H2, H3 & H7
3	Stop bars	Stop bars lights are available in RWY 07/25 runway holding positions. Stop bars are available in the taxiway intermediate holding positions B3, B4, B5, B6, C1, C2, C3 & C4.
4	Other runway protection measures	NIL
5	Remarks	NIL

For restrictions refer to ENR 4.1-1

OOSA AD 2.20 LOCAL AERODROME REGULATIONS

20.1 AIRPORT REGULATIONS

Local flying restrictions:

a) Traffic circuits: RWY 25 - LEFT RWY 07 - RIGHT

b) Circling prohibited north of RWY 07/25.

Movement areas - Aprons:

Civil Apron handling requirements:

Operators are responsible for ensuring that aircraft which park on the Civil Apron are provided with:

a) Wheels chocks under the wheels. Chocks are available from handling company.

b) Fire coverage provided by the operator when required. Fire coverage request should be at least 10 minutes prior.

(Call Duty Officer Tel.: 23 367 307)

20.2 TAXIING TO AND FROM STANDS

The allocated stand and taxiway route to be used by aircraft after landing or when taxiing for departure will be specified by TWR or GMC.

Departing aircraft shall request push-back and start-up clearances from TWR or GMC.

Assistance from the “Follow me” vehicle can be requested via GMC or TWR.

See Aerodrome and Parking Chart - ICAO.

20.3 PARKING AREA FOR SMALL AIRCRAFT (GENERAL AVIATION)

On request

20.4 PARKING AREA FOR HELICOPTERS

Helicopters arriving on the Civil Apron must park on marked stand as directed by ATC, then by ground marshaling.

20.5 APRON - TAXIING DURING WINTER CONDITIONS

Not applicable.

20.6 TAXIING LIMITATIONS

NIL

20.7 SCHOOL AND TRAINING FLIGHTS - TECHNICAL TEST FLIGHTS - USE OF RUNWAY

NIL

20.8 HELICOPTER TRAFFIC - LIMITATION

NIL

20.9 REMOVAL OF DISABLED AIRCRAFT FROM RUNWAYS

Refer to section 6 subsection 3

OOSA AD 2.21 NOISE ABATEMENT PROCEDURES

NIL

OOSA AD 2.22 FLIGHT PROCEDURES

22.1 RADAR SERVICES AND PROCEDURES

Aircraft will be vectored and sequenced to the appropriate final approach track (ILS & VOR) so as to ensure an expeditious flow of traffic. Radar vectors and flight levels/altitudes will be issued, as required, for spacing and separating the aircraft so that correct landing intervals are maintained, taking into account various factors including aircraft characteristics.

Range 100 NM for Primary Radar

Range 256 NM for MSSR

22.2 RADIO COMMUNICATION FAILURE PROCEDURE

22.2.1 At or above 6000 FT QNH

a) If in VMC, continue flight in VMC;

b) If in IMC, proceed direct to Salalah VORDME or Locator "LOM" at last assigned level and comply with ICAO procedure referenced in ENR 1.6. If unable to land, depart controlled airspace on a heading of 180 MAG, climb to 6000 FT QNH and proceed to alternate.

22.2.2 Below 6000 FT QNH:

a) If in VMC, continue flight in VMC;

b) If in IMC, make the shortest turn onto a heading of 180 MAG, climb to 6000 FT QNH, proceed to Salalah VORDME or Locator "LOM" and comply with ICAO procedure referenced in ENR 1.6. If unable to land, depart controlled airspace on a heading of 180 MAG, climb to 6000 FT QNH and proceed to alternate.

OOSA AD 2.23 ADDITIONAL INFORMATION

23.1 BIRD CONCENTRATION IN THE VICINITY OF THE AIRPORT

Large solitary predatory birds (eagles, vultures etc.) present a hazard to air navigation at all times on the coastal plain near the vicinity of the airport. Pilots are advised to exercise extreme caution when approaching or departing, particularly below ALT 3000 FT. ATC will endeavour to keep pilots advised of bird concentrations, but single birds circling at any height are very difficult to observe by ATC. Pilot reports of bird concentrations are requested. These reports are very useful in planning a programme to attempt a reduction of bird strike hazards.

23.2 GENERAL SAFETY MEASURES FOR VISUAL DOCKING GUIDANCE SYSTEM (VDGS) OPERATIONS

23.2.1 The VDGS has a built-in error detection program to inform the aircraft pilot of impending dangers during the docking procedures.

23.2.2 If the pilot is unsure of the information being shown on the VDGS display unit, pilot must immediately stop the aircraft and obtain further information for clearance.

23.2.3 The pilot shall not enter the stand area, unless the docking system first is showing vertical running arrows. The pilot must not proceed beyond the bridge, unless these arrows have been superseded by the closing rate bar.

23.2.4 The pilot shall not enter the stand area, unless the aircraft type displayed is equal to approaching aircraft.

23.2.5 When using the docking system, pilots are advised to taxi into the aircraft stand at minimum speed. The system will display “SLOW DOWN” to inform the pilot if the aircraft’s taxiing speed is too fast.

23.2.6 To avoid overshooting, pilots are advised to approach the stop position slowly and observe the closing rate information displayed. Pilots should stop the aircraft immediately when seeing the “STOP” display or when given the “STOP” sign by the aircraft marshaller.

23.2.7 The FAILED MESSAGE - The message FAILED means that docking has been interrupted and has to be resumed only by manual guidance. Do not try to resume docking without manual guidance.

23.3 VDGS-STANDS DOCKING PROCEDURE IN NORTH APRON

Do not enter the stand if the display is blank or shows WAIT, STOP, FAILED, ERR or an incorrect aircraft, unless a marshaller is present. Contact GROUND for assistance.

During the aircraft approach to the stand, the docking guidance system automatically confirms the identification of the aircraft. The aircraft must be identified at least 12M before the correct stop position. If this does not occur, the system displays “STOP” and then “WAIT”. While the aircraft is stopped, the system will attempt to identify it. If successful, the docking procedure will continue. If not, “WAIT” will be replaced with “STOP”.

Check that the correct aircraft type is displayed. The scrolling arrows indicate that the system is activated.

Follow the lead in line. When the solid yellow closing rate field appears, the aircraft has been caught by the scanning unit. The scanning unit now checks that the aircraft is the correct type and the display provides azimuth guidance information.

Look for the flashing red arrow and solid yellow arrow which provide azimuth guidance information. The flashing red arrow shows which direction to steer, while solid yellow arrow gives an indication of how far the aircraft is off of the centreline.

When the aircraft is 12M from the stop position, closing rate information is given. "Distance to go" is indicated by turning off one row of LEDs for each one half metre that the aircraft advances toward the stop position.

When the aircraft is approaching with too high speed, display will indicate "SLOW".

When the correct stop position is reached all of the LEDs for the closing rate field will be off, the word "STOP" will appear in the display.

If the aircraft stops in the correct position, "OK" will be displayed after a few seconds.

If the aircraft has gone past the correct stop position, the display will show "TOO FAR".

OOSH AD 2.23 ADDITIONAL INFORMATION

23.1 INTRODUCTION

23.1.1 The diversity and nature of aircraft operations in Class G airspace in the immediate vicinity of Suhar Airport has occasionally led to potential conflicts between aircraft known to ATSU and unknown aircraft operating in that area. To help address this issue and thereby enhance the safety of IFR flight operations whilst having minimal impact upon aircraft operations, a Mandatory Broadcasting zone (MBZ) was established around Suhar Airport to raise situational awareness for all operating within the surrounding airspace.

23.1.2 The replacement of the Suhar MBZ with an ATZ (Class G) allows the airspace to retain its original classification, yet also allows for enhanced situational awareness for all users. This therefore increases safety for all aircraft flying with in the ATZ while imposing minimal additional restrictions.

23.1.3 In order to ensure that all aircraft operating on the ground or within the ATZ are listening on a common frequency and following standard reporting procedures, the activation of radios on board all aircraft operating within the ATZ is compulsory at all times. All flight crews shall maintain a continuous air-ground voice communication watch and establish

two-way communication on the appropriate communication channel in accordance with the reporting procedures set out in Section 6 below.

23.1.4 All aircraft operating within the Suhar ATZ shall broadcast their position, intention and altitude on the Suhar Information frequency 118.725 MHz using standard ICAO phraseology.

23.2 DEFINITION

Aerodrome Traffic Zone (ATZ) - An airspace of defined dimensions established around an aerodrome for the protection of aerodrome traffic.

Note - Aerodrome Traffic Zone is a non-ICAO definition and used in terms of CAR 179 to describe airspace similar to a CTR (Class G).

23.3 ATS AIRSPACE

Refer OOSH AD 2.17 - ATS AIRSPACE.

23.4 ATS COMMUNICATION FACILITIES

Refer OOSH AD 2.18 - ATS COMMUNICATION FACILITIES.

23.5 RULES OF THE AIR APPLICABLE WITHIN THE SUHAR ATZ

23.5.1 Within the Suhar ATZ the following rules of Class G Airspace will apply:

23.5.1.1 IFR and VFR flights are permitted;

23.5.1.2 Continuous two-way VHF communication mandatory;

23.5.1.3 A speed restriction of 250 KIAS applies to IFR flights below 10 000 FT ALT;

23.5.1.4 ATC clearance is not required.

23.5.1.5 On request, and to the extent possible within the coverage area of the facilities, Muscat ACC will provide a radar-derived Flight Information Service (FIS) to IFR and VFR flights operating within Class G Airspace

23.6 COMMUNICATION PROCEDURE APPLICABLE IN THE SUHAR ATZ.

23.6.1 The following reporting procedures shall be followed by all flights operating within the Suhar ATZ:

23.6.1.1 Before Entering the Suhar ATZ:

23.6.1.1.1 At least five minutes before entering the Suhar ATZ, an initial broadcast shall be made containing:

- The designator of the station being called (SuharInformation);

- Call sign;

- Type of aircraft;

- Position;

- Flight level or altitude;

- The intention of the flight crew.

23.6.1.2 Arrivals:

23.6.1.2.1 Report entering the Suhar ATZ and providing the aircraft’s position, altitude and estimated time of landing and the pilot-in-command’s arrival procedure intentions;

23.6.1.2.2 Report when on final approach; and,

23.6.1.2.3 Report when clear of the runway on which the aircraft has landed.

23.6.1.3 In Aerodrome Traffic Circuit:

23.6.1.3.1 When joining the aerodrome traffic circuit:

- Report aircraft call sign, position in the circuit and altitude;

- Broadcasts shall be made for changes in altitude and direction; and

- Broadcasts shall be made to other aircraft in the same airspace to announce the crew's own intentions.

23.6.1.4 Before Entering Manoeuvring Area:

23.6.1.4.1 Departing aircraft must broadcast on 118.725 MHz to inform other aircraft on the ground or in the ATZ of its location and intentions.

23.6.1.5 Departures:

23.6.1.5.1 Before moving onto the take-off surface, report aircraft call sign, runway to be used for take-off, and the pilot’s intentions after take-off.

23.6.1.5.2 If a delay is encountered, broadcast intentions and expected length of delay, then rebroadcast departure intentions prior to moving onto the take-off surface

23.6.1.5.3 After take-off, report departing from the aerodrome traffic circuit, and maintain a listening watch on 118.725 MHz until clear of the Suhar ATZ.

23.6.1.6 Transiting through the Suhar ATZ:

23.6.1.6.1 At least five minutes before entering the Suhar ATZ, broadcasting the aircraft’s call sign, position, altitude and pilot’s intentions;

23.6.1.6.2 Maintain a listening watch on 118.725 MHz and make regular broadcasts regarding position, altitude and intentions; and,

23.6.1.6.3 Report when clear of the Suhar ATZ.

Area Minimum Altitude (AMA)	
Example: 2900 feet	29
Each 1° quadrilateral contains an area minimum altitude which provides a minimum clearance of 1000 feet (300 m) over under instrument meteorological conditions (IMC). The AMA provides a minimum clearance of 1000 feet above all obstacles in the quadrilateral. It is represented in thousands and tens of feet above mean sea level.

FAF-MAPt❷	min:s						
ROD: 5.24%	ft/min	424	530	636	742	848	955

❶ Missed approach minimum altitude 3000.
❷ Timing not authorized for defining the MAPt.
RNP Approach required.
Not turn before MAPt (LNAV) or THR (LNAV/VNAV).

LNAV/VNAV Temperature: Min -10°C
Max 50°C

Non precision final approach 3.00° (5.24%) / TCH 50 FT(15 M).

OOSQ AD 2.1 AERODROME LOCATION INDICATOR AND NAME

OOSQ SAIQ/Saiq

OOSQ AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA

1	ARP coordinates and site at AD	230400.00 N 0573900.00 E
2	Direction and distance from (city)	NIL
3	Elevation/Reference temperature	6500 FT/Nil
4	Geoid undulation at AD ELEV PSN	NIL
5	MAG VAR/Annual change	NIL
6	AD Administration, address, telephone, telefax, telex, AFS, Email, website	NIL
7	Types of traffic permitted (IFR/VFR)	VFR
8	Remarks	NIL

OOSQ AD 2.3 OPERATIONAL HOURS

1	AD Administration	HJ
2	Customs and immigration	NIL
3	Health and sanitation	NIL
4	AIS Briefing Office	NIL
5	ATS Reporting Office (ARO)	NIL
6	MET Briefing Office	NIL
7	ATS	NIL
8	Fuelling	NIL
9	Handling	NIL
10	Security	NIL
11	De-icing	NIL
12	Remarks	RAFO. PPR.

OOSQ AD 2.4 HANDLING SERVICES AND FACILITIES

NIL

OOSQ AD 2.5 PASSENGER FACILITIES

NIL

OOSQ AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting	NIL
2	Rescue equipment	Adequate rescue and fire fighting vehicles, equipment and personnel provided.
3	Capability for removal of disabled aircraft	Limited
4	Remarks	Full service provided HJ only.

OOSQ AD 2.7 SEASONAL AVAILABILITY — CLEARING

1	Types of clearing equipment	NIL
2	Clearance priorities	NIL
3	Remarks	AD available all seasons.
